

# THE NEXT GENERATION OF WIESE PENDULUM BUCKET CONVEYORS PX

For many decades, the company WIESE Förder-  
elemente GmbH has been manufacturing the proven  
bucket elevators and pendulum bucket elevators  
with the original WIESE rubber chain.  
Our conveying technology for bulk materials of all  
kinds has already been continuously developed and  
improved with small changes in the past.

**Now a new generation of WIESE pendulum  
bucket elevators is available:**

## The type series PX

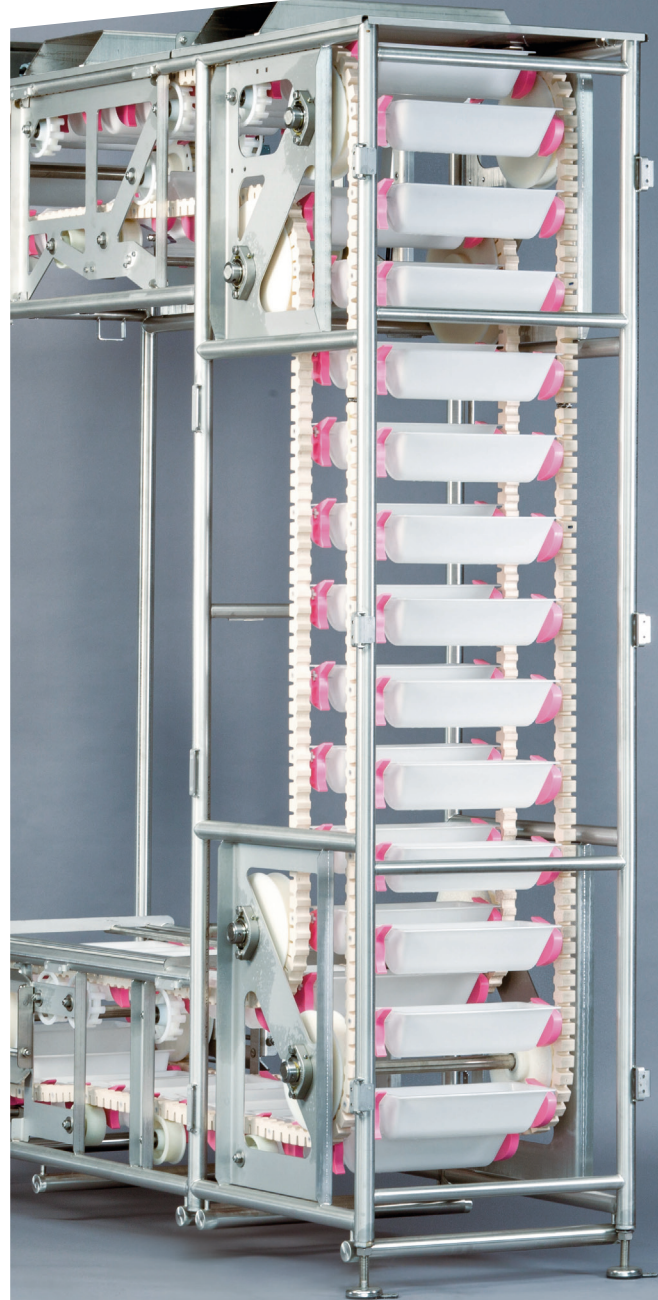

The development engineers at WIESE have imple-  
mented a completely new version of the switch  
cams and guides. This ensures even more reliable  
running of the buckets. The guides no longer need  
to be readjusted.

This achieves many advantages over the previous  
generation such as:

- Even higher availability
- Easier guidance of the buckets
- Significant less adjustment work
- Less maintenance effort
- Even more reliable operation
- Reduced wear
- As with all WIESE bucket elevators,  
the PX series is also very energy efficient

The PX5, PX10 and PX20 sizes are now available.
