

easy masstick

FEED THE IMPOSSIBLE

Easymasstick is a self-adhesive paste ready to be used.

Easymasstick is made with the freshest and highest quality ingredients. The blend consists mainly of zooplankton (*Palaemonetes varians*) harvested in our Veta La Palma Natural Space which are immediately freeze-dried to maintain an optimum nutritional value. In order to satisfy the nutritional needs of a wide variety of marine fish, freeze-dried microalgae and macroalgae are also included. The production processes are controlled and supervised by our technical and scientific personnel to guarantee a final product with the highest quality.

easy
reefs®

NEW formulated ready to use version.

- Simply take the necessary amount, knead it gently into a ball, stick it to the glass, rock or decoration and enjoy watching your favourite animals while they eat.
- Easymasstick does not contain animal or vegetable compounds from land origin or from fresh water, attractants, artificial preservatives or synthesis products.
- Easymasstick provides an essential source of proteins, lipids rich in fatty acids (EPA, ARA and DHA), vitamins and carbohydrates, all from natural sources of marine origin.
- Easymasstick formula naturally attracts finicky fish which begin eating it immediately or shortly after adding it to the aquarium.
- Easymasstick is mainly composed of freeze-dried zooplankton, it does not contain fish skeleton and is therefore very low in phosphates compared to its protein content.
