Discover SFERO

Sfero is an impressive play set made of regular geometric shapes. **The unique arrangement of connected modules creates a modern, 3D structure** that immediately catches the eye and gives a special character to the whole area.

The system features winding tube slides, making playtime more exciting and allowing children to experience the playground on multiple levels. A stable steel frame and certification of compliance with **EN 1176 safety standards** guarantee that **the equipment is completely safe**, even during intensive use.

Designed for children **aged 4 and above**, the extensive, multi-layered form of the structure encourages kids to engage in various activities, such as climbing, exploring, and discovering new pathways. Playing on SFERO actively helps **develop coordination, physical strength, spatial awareness, and creative thinking**.

Resting

Beyond its play value, **SFERO is a system designed with logistics efficiency and a timeless aesthetic in mind**. Its smart modular concept means that each unit is a coherent, standalone structure that is exceptionally **easy to transport and quick to install**. This approach gives investors complete flexibility of choice, ranging from smaller units like **SFERO 1-1** to much larger configurations depending on the available budget, including monumental

SFERO 5-1 sets that reach an impressive height of 7.5 meters. The geometric design, based on the symmetry of a truncated octahedron, ensures optimal distribution of dynamic loads and brings architectural harmony to the entire space. **Additionally, the system is available in several theme variants, such as FOREST or SPACE**, making it easy to integrate seamlessly into any landscape or surroundings.

Why SFERO?

- ✓ **An investment icon visible from afar**
The monumental SFERO structure becomes the centerpiece of the entire recreational area.
- ✓ **One piece of equipment, up to 70 children**
High capacity helps reduce queues and works perfectly in heavily used spaces.
- ✓ **Modern design based on regular polyhedrons**
The unique form makes the playground stand out and perfectly fits into prestigious urban projects.
- ✓ **Play in three dimensions**
Climbing inside the spheres develops children's coordination, strength, and spatial imagination.
- ✓ **Stable and durable stainless steel structure**
Massive, powder-coated steel tubes increase the equipment's durability.
- ✓ **Safety confirmed by the EN 1176 certificate**
The equipment meets the requirements for public playgrounds and public tender projects.
- ✓ **One mega-attraction instead of several smaller devices**
SFERO can serve as the central, complete play point in a single project.

SFERO SPACE playsets

From compact models to extensive structures – various variants allow the system to fit into any space.

Materials and technical data

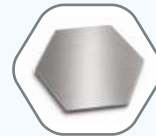

1. Powder-coated stainless steel

The structure, made of powder-coated stainless steel, ensures high durability, stability, and safety.

2. Galvanized carbon steel

Connecting elements and tunnels made of galvanized and powder-coated steel type S235, ensuring high durability and resistance to outdoor conditions

3. Stainless steel

Stainless steel parts ensure durability, stability, and safety, while offering high resistance to damage and outdoor weather conditions.

4. HDPE panels

Panels made of durable HDPE material with attractive graphics give the equipment its unique character and spark children's imagination.

5. PP ropes

Reinforced 16 mm polypropylene ropes are highly resistant to UV rays, heavy use, and outdoor weather conditions.

6. PP rope (ship rope)

The thick and strong ship rope serves as a balancing element and highlights the unique character of the equipment.

7. EPDM rubber

Platforms made of fiber-reinforced EPDM rubber provide a durable, stable, and wear-resistant surface.

8. HPL panels

Platforms made of HPL boards with a non-slip texture are durable, weather-resistant, and give the equipment a modern, unique character.

9. Rotomoulding HDPE

The plastic slide made using the HDPE rotational moulding technique features low thermal conductivity, which reduces the risk of the surface overheating on hot days.

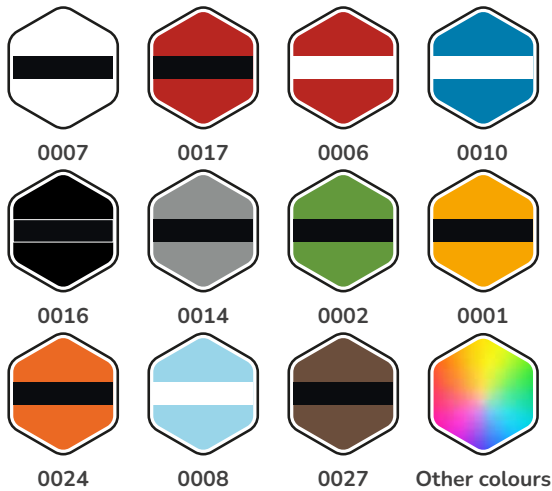

10. Polycarbonate

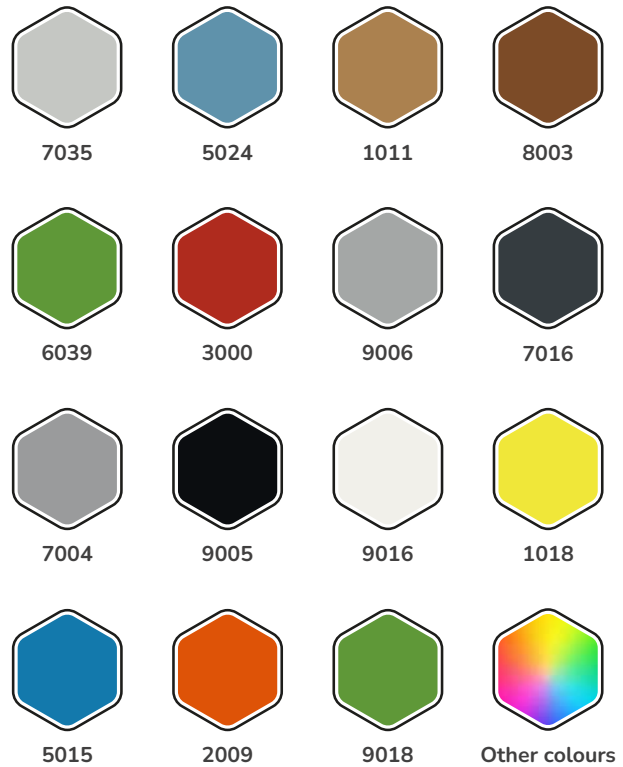

Polycarbonate windows are exceptionally impact and shatter-resistant, ensuring safety and an aesthetic appearance.

Creative play

1. **SFERO SPACE**
Futuristic color scheme inspired by deep outer space world and progressive style.
2. **SFERO FOREST**
Organic shades drawn directly from peaceful wild landscapes and woodland harmony.
3. **SFERO DESERT**
Cozy color palette echoing the raw beauty of sunny desert environments.
4. **SFERO NORDIC**
Clean aesthetics based on Scandinavian elegance and cool northern lifestyle.

Playground design app **INTER PLAY STUDIO**

**Design
Your own
playground!**

- ✓ Design professional playgrounds quickly and intuitively.
- ✓ Access a comprehensive library of equipment and ready-to-use design solutions.
- ✓ Save time with automatically generated documentation.
- ✓ Impress clients with realistic project visualizations.
- ✓ Work from anywhere with a cloud-based platform.
- ✓ Focus on creativity instead of repetitive, time-consuming tasks.
