We automate the most annoying
process in logistics

Load carrier, container and returnable packaging management

Logistikbude

Logistikbude

An expensive business:
The management of pallets, boxes, frames & Co.

Returnable load carriers are essential for smooth production logistics. However, in nine out of ten companies, their management is inefficient and therefore one thing above all: costly.

Frustration among employees
Many production companies rely on Excel or other systems to manage their load carriers manually. This is error-prone, time-consuming and causes frustration in the teams.

Annual repurchase
A lack of transparency and slow throughput times mean that production companies have to buy up to 10% of their returnable load carriers on average every year.

Many different systems
Load carriers are recorded in different systems, usually without a real-time overview. Stocks remain unclear, shrinkage is recognised too late and each load carrier type requires its own software.

All load carriers in one central software

With the Software as a Service solution from Logistikbude, production companies can manage all their various reusable items centrally and automatically. From standard load carriers (e.g. pallets) to containers and special solutions such as production racks.

Logistikbude

Our approach: Automated management of all load carriers in a centralised software solution

Empties stocks in real time

See where your load carriers are at all times. Prevent bottlenecks thanks to a transparent stock overview.
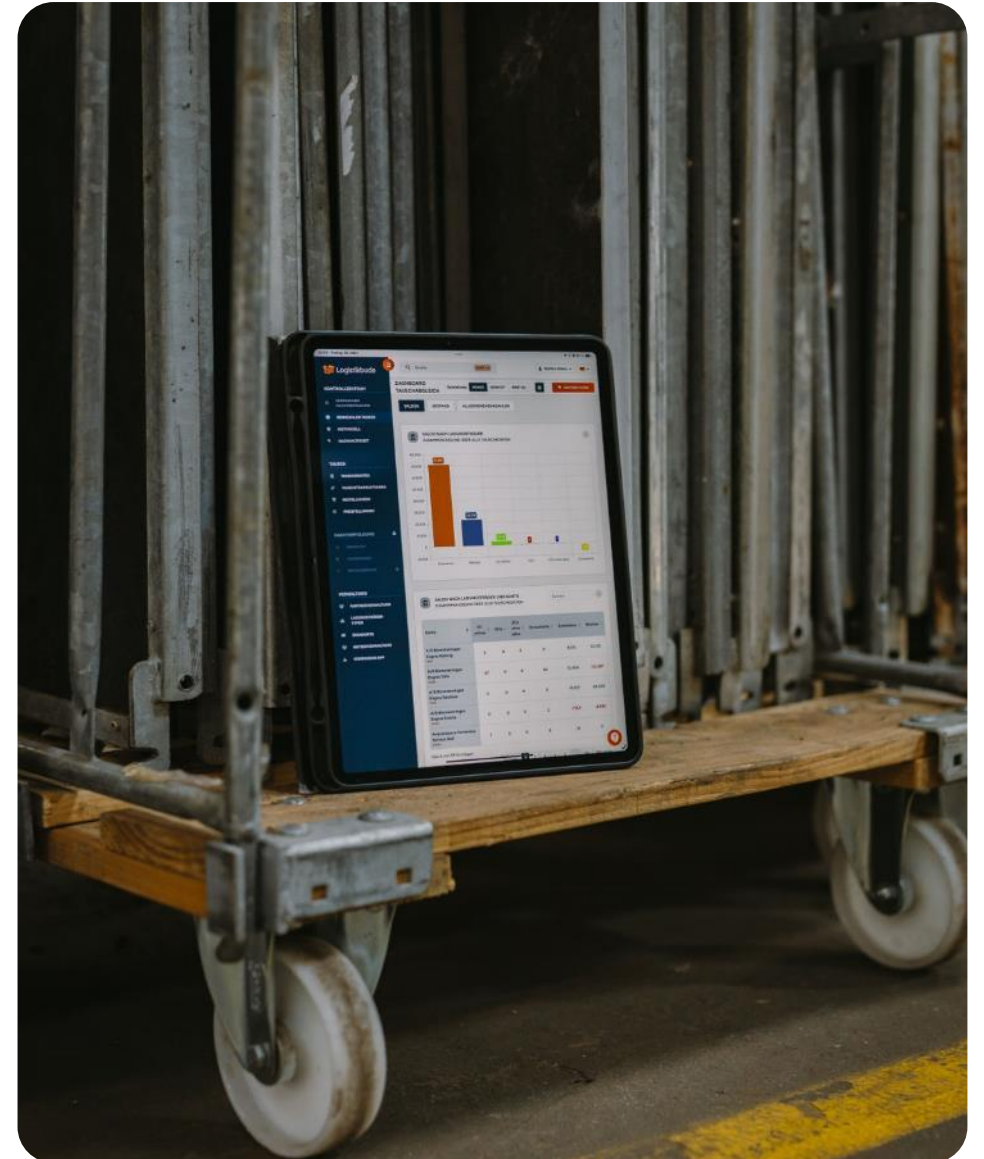

Smart disposition

Our forecast function optimises your production supply with suggestions. This allows you to recognise peaks in demand at an early stage.

Supplier management

Your suppliers and service providers can order and release load carriers without their own login and view all stocks in real time at any time.

Flexible technologies

Flexible combination of manual entries (app & web), data from your own systems and active solutions (IoT, BLE, RFID).

Logistikbude

The 4 stages of
reusable management

Stage #1
Digitisation

#Einstieg

Digitise your load carrier management. Centralised management via web platform & app instead of manual isolated solutions.

In concrete terms:

👉 Real time instead of Excel
👉 See & report suppliers

Stage #2
Automation

#Einstieg

Your booking processes are automated through interfaces and data imports. Data comes directly from your systems for less manual reconciliation.

Means:

👉 Automatic imports
👉 Reminders & synchronisation

Stage #3
Controlling

You get full cost control. Monetary valuation, automatic invoices and centralised data. Complete controlling, billing (shrinkage, stock, locations) incl. invoicing and reporting ("P&L for load carriers").

You can expect:
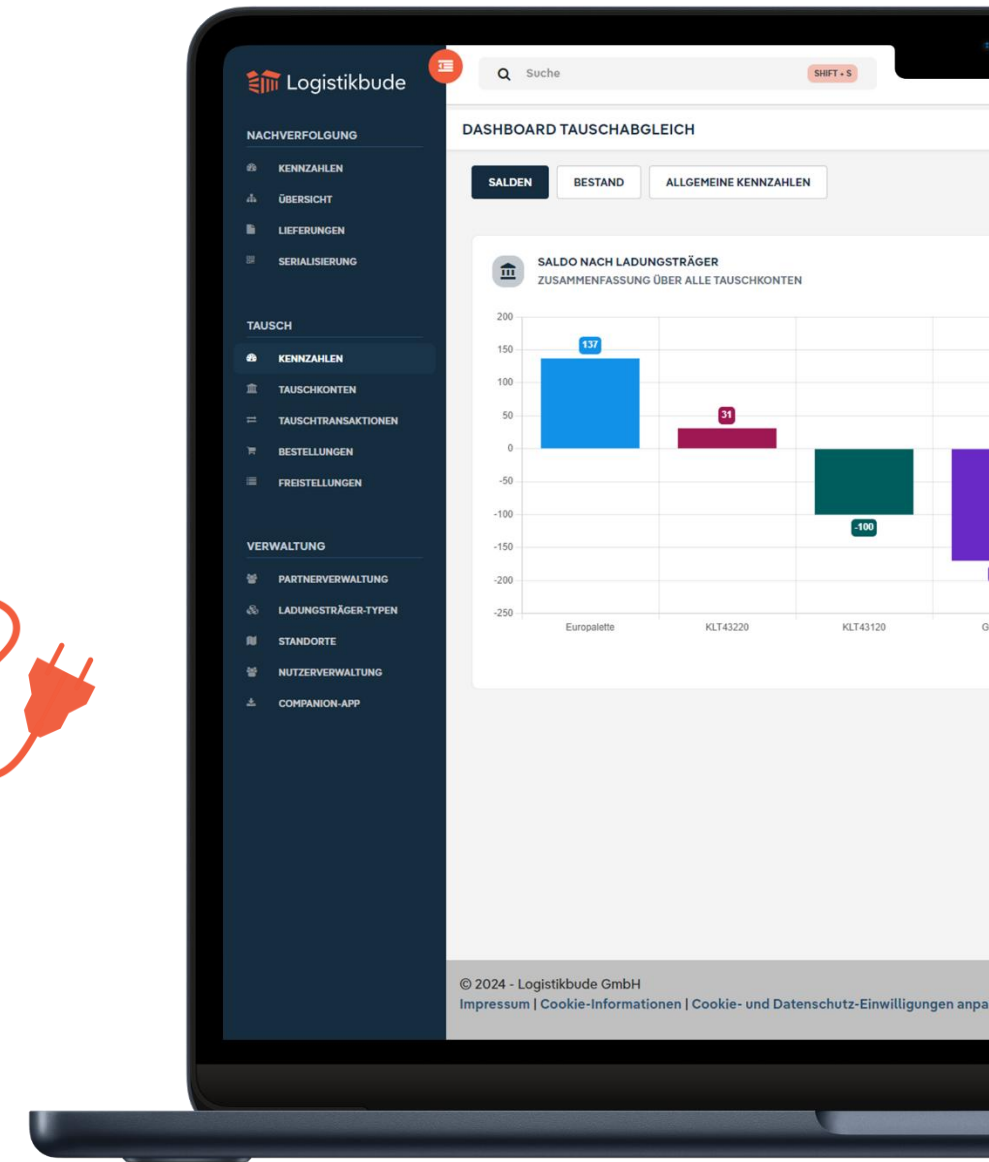

👉 Auto invoices & reports
👉 Inventory & cost allocation

## Stage #4
Agent

Fully automated processes. Intelligent workflows and interfaces for maximum efficiency. Fully automated handling of all load carrier processes.
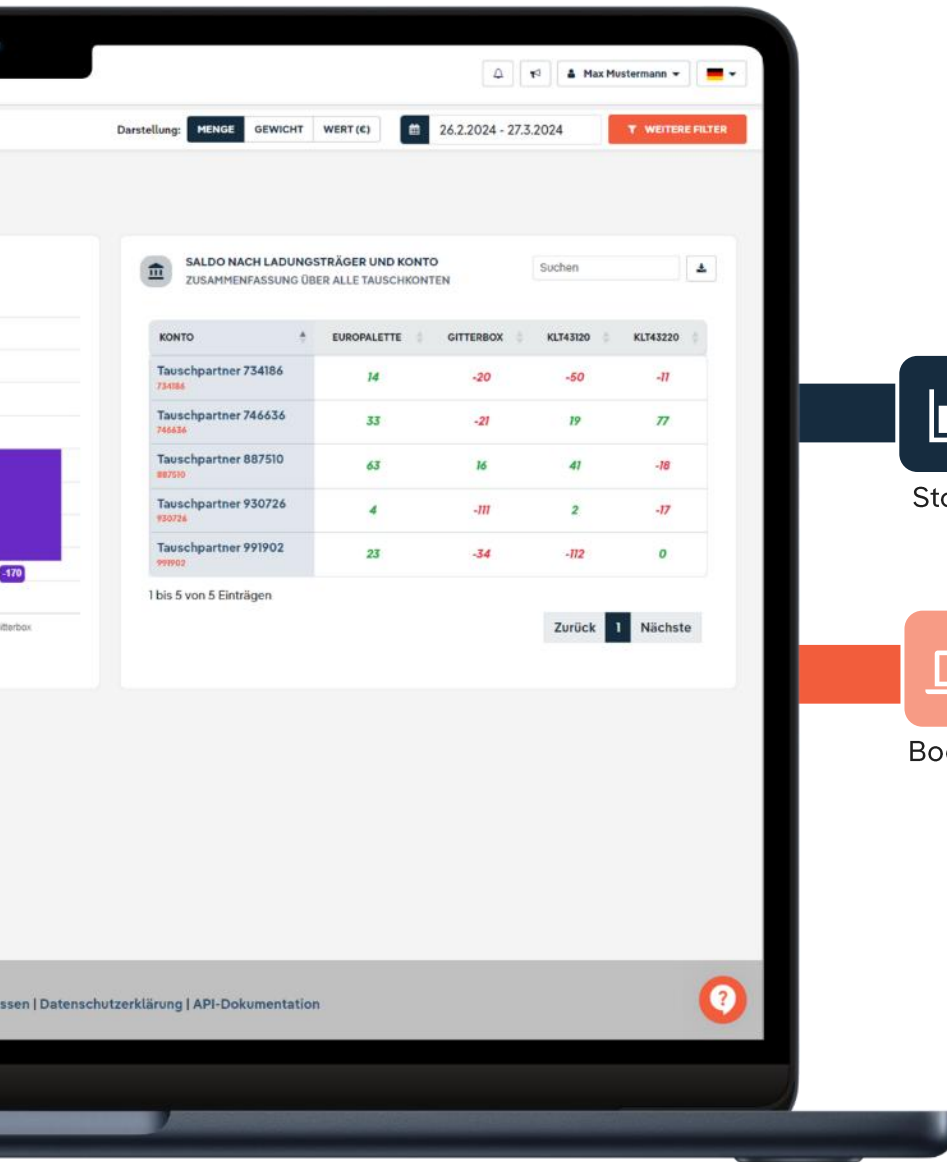

How you benefit:

👉 Fully automated processing
👉 Workflows take the pressure off

How does it work?

via Interface

SAP	ERP	WMS
TMS	Third-party solutions	Production system

Data from partners

Interface Pooler	Account statement forwarder	Receipts (PDF, CSV, Excel)

Toolbox

App	Web	Partners (IoT, RFID, etc.)

Plug & Play Connector

In this way we create ...

1. transparency

| Stocks | Accounts | Shrinkage | Circulations | Forecast | Impact |

| Booking | Coordination | Order | Approvals | Alarm | Rent |

2. automation

Logistikbude

This will change for you,
as soon as you work with us

Without Logistikbude

❌ Manual account management & reconciliations with partners cost time & are prone to errors.

❌ Delivery & transport tasks run via multiple, isolated systems - no centralised overview.

❌ In addition to our own systems, various partner systems are booked daily.

With Logistikbude

✅ Automated account management & exchange account reconciliation via web link.

✅ One solution for all load carrier tasks with complete transparency and real-time data.

✅ API integration into existing systems - no more duplicate data maintenance required.

---

bekuplast

I was surprised that there is already a perfect solution for us for our daily challenges regarding the exchange of Euro pallets. We were able to start using Logistikbude's solution in a very short time and benefit from a complete digital process that transparently displays the exchange processes and exchange accounts, including balances, in real time and at the same time offers us an integrated solution for centralised communication with the exchange partners.

Maik Westenberg
Head of Digital Transformation (CDO)

Learn more

Where do we go from here?

👉 **Step 1:** Initial consultation

- Introduction and getting to know each other

- Detailed recording of the processes including an initial consultation on possible optimisations

- Determination of the current process. Existing processes and structures are scrutinised and transformed into a vision for the future

- ▒ Goal: We have understood your process and your requirements

👉 **Step 2:** Live demo

- After getting to know you, we will demonstrate your specific use case in a live demo

- You get a detailed insight into all the functions relevant to you

- If you wish, we can provide you with a test account afterwards

- ▒ Goal: You know our software and we can answer together whether it solves your problem

👉 **Step 3 :** Offer

- If we have convinced you in step 2, we will be happy to send you a customised offer

- This is based on your load carrier throughput and includes support and further development in addition to the use of the software

- ▒ Goal: We can convince you that using the software will pay off for you. No offer without a business case, word of honour ☝️

👉 **Step 4:** Onboarding

- If you decide to work with us, we will agree the roll-out date together

- As the software is plug & play, the go-live can take place within a few weeks

- Experienced process engineers accompany you closely during onboarding and support you in training your employees and optimising physical processes

- ▒ Goal: You and your business partners (customers, suppliers, service providers) can operate the software safely
