

Mobile applications are exposed to 2 types of threats

INTERNAL THREATS

Unexpected behaviors

Ex : A library collects your personal data without your knowledge

Code vulnerabilities

Ex : The configuration of the application to the server is not secure

EXTERNAL THREATS

Attacks on the user's phone

Ex : A malware intercepts the application's transaction

Code cloning and injection

Ex : A hacker clones your application to inject malware into it

Consequences of a cyberattack

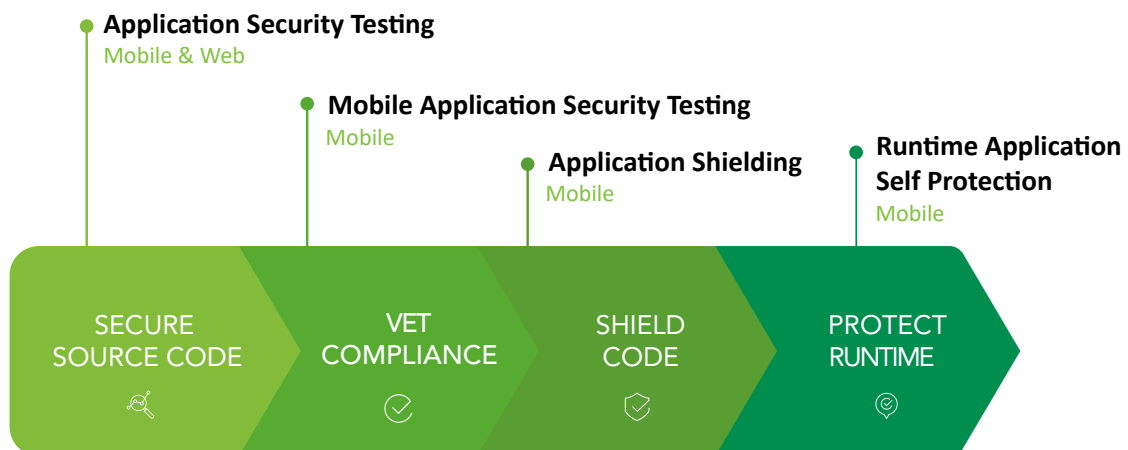

- Data leak
- Damage to the brand image
- Inoperability of services
- Financial penalties (GDPR...)

ASSESS, CORRECT, PROTECT

End-to-end protection

Tailored to all levels of expertise

Multi-language compatibility

PREVENTIVE SECURITY MEASURES
Security by design

REAL TIME PROTECTION
Runtime detection and response

About Pradeo

- Leader in application security
- Data centers in Europe

Application security made simple.
