# ISMS successfully introduced and certified according to ISO 27001

**More than 700 ISMS projects successfully completed**

Cyber attacks and data theft now affect almost everything and everyone. The management of information security therefore makes a decisive contribution to whether a company can secure its business processes and enjoys trust on the market.

The international standard ISO 27001 can help companies or public authorities to get certified that their planning, implementation, monitoring and continuous improvement

of the information security comply with these internationally recognized requirements.

As a certified IT security service provider for "IS consulting and IS revision as well as penetration tests" by the German Federal Office for Information Security (BSI), TÜVIT has the necessary level of trustworthiness and skills to perform corresponding audits.

**Your benefits**

- Sustainable protection of your information, data, IT and business processes

- Proof of confidence and compliance to clients and business partners

- Broad experience of the TÜVIT experts, e.g., in Business Security, Cloud Security, Cyber Security, Industrial Control Systems (ICS) or Smart Energy

TÜV®

**TÜVNORDGROUP**
