

# STAR Drain DRAINAGE CHANNEL SYSTEMS

- Aluminium, corten steel or stainless steel gratings

CLASS

- Discreet channel system with top grating
- Aluminium (black or gray nature), corten steel or stainless steel gratings
- Easy and quick installation

- Flexible and easy adjustable layout
- High quality channels of extruded PVC for drainage of light traffic areas

### **PCK BELGIUM**

PCK Belgium is a company established in Belgium. It was started in June 2012, but it has gained expertise during a period of forty years in relation to drainage technology.

Our sales office in Vancouver (Canada) was opened in May 2018 to access the North American market.

Our products, the stylish Star Drain and Aqua Drain series, are currently being produced in three dimensions for all your drainage requirements. All products that we have developed are of a high quality and are processed using the most modern of technologies.

In 2023, we also decided to expand our range to more design and to do so in stainless steel We have also added a new black, Premium Black. This black has a rougher edge but still very attractive to install as line drainage.

PCK Belgium knows it supplies quality products that will withstand the ravages of time thanks to its choice of raw materials: PVC and aluminium.

PCK Belgium has the facilities that allows it to consolidate deliveries with different products, which guarantees that customers have a greater degree of flexibility in relation to stock.

Peter Schelstraete, 2021

### **TECHNICAL SPECIFICATIONS / MATERIALS**

#### **Description:**

STAR-Drain is a simple and discreet drainage channel system with drainage elements in high quality extruded PVC. The channels are easy to install - even for self-builders. The elements comes in lengths of 1000 mm, made easy to assemble with practical connection pieces, that are glued and clicked onto the channels from below. The channel elements can also be easily shortened to suitable lengths by using a hacksaw or an angle grinder

The channels are mounted with inserted top gratings of either black or natural gray aluminum, or corten steel. The gratings stabilizes the channels and creates a nice transition from the channel to the surrounding pavement.

STAR-Drain is available in channel widths and heights of 60 X 60 mm, 65x100 mm, 100x50 mm, and 100 x 100 mm.

A full range of accessories is available for the STAR-Drain channel system. Connectors, end pieces, corner elements and T-elements. Channel drains are established either from the bottom of the channel, with a vertical outlet, or through th end piece with a horizontal outlet. STAR-Drain is classified for load class A15 (1,5 tons). For light traffic areas, exclusively used by pedestrians, cyclists and the like.

### **Stainless Steel range**

#### What is stainless steel ?

Stainless steel is known for its versatile and wear-resistant material. It can be used both indoors and outdoors. In fact, stainless steel is not completely free of rust. There is even a layer of rust on the metal, called the oxide layer. This thin oxide layer is clear in color and not visible. This is in contrast to rust on normal steel, which is easy to see and leaves brown stains on the material. The oxide layer on stainless steel is present on the entire surface and acts as a kind of protective layer. It stops the oxidation process and thus actually prevents "rusting.

This protects the metal from external influences.

PCK Belgium has something for everyone by designing different designs. Also available in different sizes

Specification stainless steel grating thickness 2mm, 1.4301 AND ISO 9445/10088-2

### **Stainless Steel - Designs**

#### **Falcon Line**

The rounded part of the design offers a nice contrast to any environment

#### Viking Line

To find the name of this design, of course, this was easy With the viking boats outlined on the design, we came immediately to the conclusion with "Viking

#### **Diamond Line**

Diamonds are always the perfect image to have as a design Sleek but also very pleasant to look at

Ш

### **CORTEN STEEL**

#### What is corten steel ?

Corten steel has in recent years become more and more popular in many architectural outdoor projects due to the natural oxidizing finish, which creates a very special and unique look and minimizes the need for maintenance.

Corten is a special steel alloy, developed to avoid the need for painting and maintenance. When corten steel is exposed to weather and wind, in time the surface acquires a stable and rust-like patina, which increases the steel's resistance to atmospheric corrosion compared to other types of steel.

Corten steel resists corrosive effects of rain, snow, ice, fog and other meteorological conditions by forming a coating of dark brown oxidation over the metal, which prevents deeper penetration and removes the need for paint and rust prevention maintenance.

In short, the steel is allowed to rust on the surface, thereby forming a protective coating that reduces the rate of future corrosion.

### When you purchase Star - Drain wih gratings in corten steel

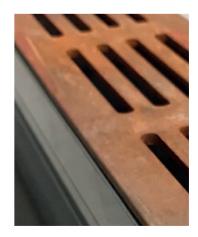

When you purchase STAR-Drain with grates of corten steel, the patina may not have had the time to fully develop, at the time of delivery.

The grating may look something like in the picture below.

During the patination process, rain water may get a rusty brown color and leave stains and discoloration to the surrounding (porous) surfaces. We recomend seperated storage of the gratings, in a place where the patina can fully develop, until they look like in below picture. Depending on the time of year, this takes just a few weeks of exposure to moisture and fresh air

### **INSTALLATION INSTRUCTIONS**

STAR-Drain is a drainage channel system that consists of a plastic (PVC) channel element with an aluminum or corten steel grating. The drainage channel is for use around the home, in areas with no traffic or light traffic only (pedestrians, trollies, cyclists, etc.).

- 1. With STAR-Drain, the water from the channel can be discharged to either the sewer or an infiltration system (LAR) through optionally a side or a vertical bottom outlet. Bydirecting the water to an infiltration system (LAR), you work sustainably to improve the soil's water balance
- 2. To make a horisontal end outlet, use the open end cap with integrated outlet connection.Ø30 mm, Ø50 mm or Ø75 mm depending on channel model. For a vertical bottom outlet, use the vertical outlet connection (find both connection units available in accessories).For vertical bottom outlet first drill a hole of 45-50 mm (or 90-95 mm depending on channelmodel) in the bottom of the channel using a hole saw, exactly next to the location of thedrain. Then glue and mount the bottom outlet connection unit to the bottom side of the channel

#### Attention:

- 1. Connect a suitable number of drain oullets per channel string depending on the inflowarea. You can prevent odors by installing a siphon when connecting to the waste water sewer.
- 2. Make a trench of approx. 15 cm deep for the foundation. The foundation must have minimum dimensions: 5 cm high and 10 cm wide.
- 3. Apply stabilized sand in the trench in the ratio 1 : 3 (cement : sand). Adjust the mixture to the desired height. Click the connecting pieces around the channel elements and adjust to the correct height. Fill the trench to the bottom of the pavement with sand cement.

## NB! - Always leave the grate in the channel element during installation, to avoid any deformation of the channel

- 4. Carefully compact the foundation strip around the channel, leaving the channel in its original form.
- TIP: ✓ With new paving, we advise you to tension a wire to determine the height level Always set the grate 4mm below the wire.

✓ If you install the channel in existing paving, we advise you to make a wooden template with the desired height, which you can strike off

✓ When the channel is laid along an upright wall, the flaps of the connecting piece must be cut off on that side.

- 5. You have the option of shortening both the channel element and the grate to any desired length using a hacksaw or an angle grinder
- 6. The end are attached to channel ends. due to the difrence in the expansion coefficient of plastic (channel) and aluminium and corten steel (grates) a small deviation in length may possibly occur over time between the channels and the grates
- 7. All plastic parts can be connected to each other in waterproof joints using PVC glue

## FAQ

### Is the Star-Drain or Aqua Drain grid subject to oxidation?

No, because the aluminium grid is anodised in accordance with maritime quality specifications.

#### Can we drive over the Star-Drain and Aqua Drain with a vehicle?

Yes, with a maximum speed of 30km/h and provided that th draingae has been installed in accordance with the installation instructions.

#### Where and for which application can I use the drainage exactly?

In the area where the Star Drain and Aqua Drain must be installed. Consult the architect, contractor or specialised construction material trader where you want to install the drainage. Obviously, if there is much precipitation in an area, a wider drain must be installed, such as the Aqua Drain, and in drier areas, a narrower drain, such as the Star Drain.

#### Which is the maximum flow rate of the Star-Drain and the Aqua Drain?

- Star Drain 65/100 360 l/m.
- Aqua Drain 50/100 330 l/m.
- Aqua Drain 100/100 400 l/m.

#### Can the plastic channel and the aluminium grid be shortened?

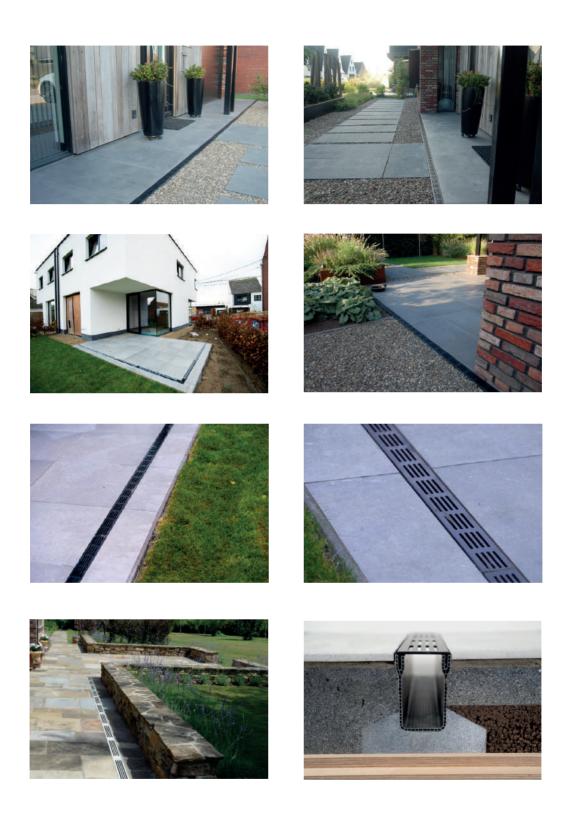

Yes, they can be shortened by using the appropriate tools. Ensure that any sharp edges are removed after shortening both in relation to the PVC channel and the aluminium grid.

#### Can the line drain be installed on a balcony or terrace?

Yes, the Aqua Drain 50/100 has been especially designed for this application. Due to its height of 50 mm, this is the right drain for this.

#### Can the line drain be recycled?

Yes, all products designed by PCK Belgium can be fully recycled. Both the plastic channel and the aluminium grid can therefore be recycled.
