TOFU 300%

Discover the next level of cat litter with MrCat® TOFU Unscented 300%, a premium plant-based formula designed for superior absorption and cleanliness.

With an exceptional 300% absorption rate, it instantly locks in moisture, neutralizes odors and forms tough clumps that make scooping litter effortless.

Designed for superior freshness, MrCat® TOFU CARBON 300% combines the natural absorption power of the former with the power of activated carbon for advanced odor control.

These two super-agglomerating formulas retain moisture and neutralize odors instantly, guaranteeing a cleaner, fresher home.

A close-up photograph of a person's hands pouring coffee beans. The person is wearing a dark blue jacket with colorful, patterned cuffs. They are holding a long, narrow wooden tray filled with dark coffee beans. The beans are being poured from the tray, creating a vertical stream of beans that falls towards the bottom of the frame. The background is a soft, out-of-focus green, suggesting an outdoor setting. The text "Made with Coffee & Love" is written in a white, cursive font at the bottom of the image.

Sustainable Cat Litter Solutions: Discovering the Benefits of Rice Husk

As eco-conscious consumers become more aware of the impact of traditional cat litters, many are seeking out alternatives that are better for the environment. One promising solution that is gaining attention is the use of rice husk as a cat litter material.

Rice husk, the protective outer shell that is removed from rice grains during processing, is an abundant and renewable agricultural byproduct. Rather than ending up in landfills, this material can be repurposed to create a highly effective and sustainable cat litter.

One of the key advantages of rice husk litter is its superior odor control. The porous structure of the husk material helps to absorb and trap odors, keeping litter boxes fresher for longer. This natural odor-fighting ability means pet owners can reduce the frequency of litter changes, cutting down on waste.

Rice husk litter is also exceptionally absorbent, capable of soaking up many times its own weight in liquid. This high absorbency translates to less litter usage overall, making it a cost-effective and eco-friendly choice. The material is also biodegradable, allowing for easy and responsible disposal.

Beyond its practical benefits, rice husk litter aligns with the growing demand for green, plant-based pet products. As consumers like those at MrCat® seek out companies committed to sustainability, this innovative litter solution meets the need for quality, nature-inspired items that minimize environmental impact.

By repurposing an agricultural byproduct into a high-performing cat litter, rice husk offers a win-win solution.

Pet owners can feel good about choosing a litter that is gentle on both their feline friends and the planet.

As awareness of this sustainable alternative grows, rice husk is poised to become a leading choice in the eco-conscious cat litter market.

Original Rice husk 140%

Harness the power of nature with MrCat® RICE HUSK, featuring a 140% absorption capacity that ensures moisture is quickly absorbed and odors are neutralized. Its super clumping formula creates firm, scoopable clumps for easy cleanup, while its natural rice husk composition makes it an eco-friendly, biodegradable choice.

Perfect for environmentally conscious cat owners, it provides a fresh, clean litter box with minimal effort.

In summary, the main strengths of rice husk as cat litter are its excellent odor control, high absorbency and biodegradability, as well as being a sustainable, environmentally-friendly solution.

MILLET 300%

A very soft cat litter

Introducing MrCat® MILLET, a natural, plant-based cat litter designed for maximum performance.

With a 300% absorption capacity, it locks in moisture instantly, while its super clumping formula ensures easy, mess-free cleanup.

Made from eco-friendly millet, it's gentle on your cat's paws and offering a fresh, odor-free litter box with every use.

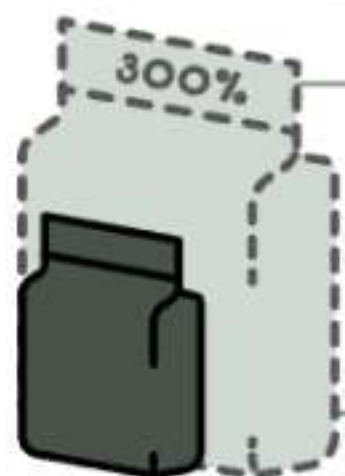

**NATURAL
& CLUMPING**

Using millet-based cat litter offers significant environmental benefits. As a renewable, biodegradable material, MrCat® millet-based cat litter reduces the amount of waste sent to landfill compared with conventional clay or clumping litter.

The production of millet litter has a lower carbon footprint, as it uses an abundant agricultural by-product rather than extracting and processing non-renewable resources.

Millet-based litter is therefore a more sustainable choice that meets the growing demand for environmentally friendly pet products.

PINEWOOD

MrCat. Pinewood-Based Cat Litters: A Sustainable Solution for Eco-Conscious Pet Owners

As consumers become increasingly aware of the environmental impact of their purchasing decisions, the pet industry has seen a growing demand for sustainable and responsible product alternatives. This trend is particularly evident in the cat litter market, where pet owners are seeking out litters that not only perform well, but also align with their values of environmental stewardship.

Enter MrCat®, a brand that has risen to the forefront of the eco-friendly cat litter movement. At the heart of MrCat.'s offerings are its pinewood-based cat litters, which leverage the natural benefits of this renewable resource to provide a superior litter experience.

The key advantage of MrCat.'s pinewood litters lies in the responsible sourcing of the raw material. The pine wood used in production is harvested from self-managed, FSC-certified forests, ensuring a sustainable and traceable supply chain. This commitment to responsible forestry practices sets MrCat. apart from many traditional clay-based litters, which often rely on non-renewable mining processes that can have a significant ecological footprint.

Beyond its green credentials, the MrCat. litter also excels in performance. The natural absorbency of pine wood allows for excellent odor control, keeping litter boxes fresher for longer and reducing the frequency of litter changes. The litter also forms firm, easy-to-scoop clumps, minimizing waste and making disposal a breeze.

For eco-conscious pet owners, the MrCat. pinewood-based litters offer a compelling solution that combines environmental responsibility with practical functionality. By choosing this sustainable alternative, consumers can feel good about their purchasing decisions and the positive impact they are making on the planet.

As the pet industry continues to evolve, our MrCat. brand prioritizes environmental stewardship and innovative product design are poised to capture the attention of a growing segment of consumers who are passionate about reducing their carbon footprint. With its commitment to sustainable sourcing, superior performance, and alignment with the values of today's eco-conscious pet owners, MrCat. has established itself as a leader in the realm of responsible cat litter solutions.

Our pine-based litters come in 2 different formats, crushed or pellets, and in 2 possible versions, clumping and non-clumping.

PINE

Crushed / Clumping

500%

Experience the natural power of MrCat® Woodpine, crafted from the finest crushed pine for superior performance.

With an exceptional 500% absorption capacity, it rapidly absorbs moisture, keeping your cat's litter box dry and odor-free. Its super clumping formula ensures easy, mess-free cleanup, while the natural pine scent provides a refreshing, woodsy aroma.

Biodegradable and eco-friendly, it's a perfect choice for both your feline and the environment.
