

● MAKSIPAK PACKAGING

In a continuously evolving market, Maksipak is one of the largest pre-made pouch manufactures in Turkey offering tailor made solutions, based on experience, technology and customer care. Superior quality, attention to details and value-based service are the essence of our daily commitment.

Our plant is equipped with high technology Japanese machines such as NISHIBE and TOTANI and has the most advanced instruments ensuring a constant quality control and an ongoing Research & Development activity.

Maksipak is ISO certified and all products manufactured at our factory are BRC certified, to guarantee safe and hygienic production processes.

Food Packaging must preserve food integrity and ensure food safety, therefore conversion requires a high level of technical knowledge. Thanks to our long years of experience, we have become a reliable partner, not just a supplier, able to give technical support and assistance to our customers.

Flexible Packaging is increasingly being used in various branches of industry, even outside food sector. Our proved experience in different areas such as household, cosmetics, textile etc. enable us to offer the most suitable solution to each single request, depending on the final purpose of Packaging.

We work hard to offer the highest flexibility and a range of diversified products.

Maksipak has been a leading company in food Packaging business since 2010. It immediately became a successful partner and acquired important customers, technical know-how and advanced technology.

Highly specialized personnel and modern technologies, top quality materials, hygiene and R&D are just some of the qualities you can expect from Maksipak, your trusted business partner!

We are strongly export-oriented company that has been expanding into foreign markets and increasing partnerships abroad due talented people possessing fluent communication skills in multiple languages. It supplies flexible Packaging all over the World and exports approximately 60% of its turnover.

Last generation Japanese machines as well as highly qualified team, allow Maksipak to act as a global partner, who strongly supports customers in their choice of the best Packaging solution.

Maksipak can propose many different solutions, from standard to tailor-made ones, in order to satisfy all kinds of market requests. Each product is prepared with craftsmanship care. Our flexible organization guarantees quick and on time delivery of orders.

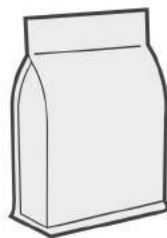

Very high quality, fast manufacturing and flexibility are offered to match all customers' expectations.

●● Packaging Features

According to your requirements we can add the following features to your ready-made pouches. Each option has its special purpose.

- Different closure systems such as zipper, easy lock, front zipper or pressure closure.
- Tear notch - makes flexible bags to open easily and allows consumers to easily tear the film in order to gain access to the product without scattering around
- Laser scoring - provides extra convenience for customers creating easy opening options for a variety of flexible packaging materials.
- Rounded Corners- prevent injury caused by sharp edges, making them easier to handle
- One way degassing valves
- Round holes or euro slot- so that your products reach the best places in the supermarkets
- Handle - very convenient option particularly for heavier products that allows customers to carry products easily without using any extra bag
- Fingerhang hole
- Spout - allows easy and convenient dispensing of liquid or dry products.

We are highly flexible in the development of your packaging material composition, pouch shape and size for your particular product.

Packaging design is an essential part of communication process with consumers. To meet the specific requirements of our customers who require high-quality printing on their packaging, we offer 2 printing techniques: Rotogravure and Flexographic printing.

- **Rotogravure** means excellence. It is a type of printing, which includes engraving the image into image carrier and the image is engraving into a cylinder. Rotogravure printing is the ideal solution for your company if you are looking for flexible packaging with excellent image quality, custom material laminations and high precision printing results. Rotogravure printing is suitable for any material, you to get detailed and complex images using up to 10 colors. A wide choice of drying systems is available to dry any ink thickness.

- **Flexography** is a cost-effective type of printing process which utilizes a flexible printing plate (cliché) made of photopolymers and fast-drying inks to print on a variety of substrates. Flexographic printing can be used on different materials like plastic, paper, foil and metalized films.

Flexography is particularly suitable to print high-coverage, special, metallic colors, texts and varnishes offering a wide color gamut and precision of details.

Your packaging can be printed using UV or UV LED, EB, water-based or solvent-based inks. A wide variety of 10 color flexo printing options are available to you to ensure that your product is eye-catching and aesthetically appealing to any consumer.

Using a variety of materials, such as films, paper, and foils, we meet and exceed the most demanding customer needs in packaging of wide range of food, personal care, pet food and industrial products. Our packaging products have been carefully tailored to ensure high quality of your pre-made packaging at the most cost-effective solutions.

We offer you:

- ✓ A wide range of finishes available (matt, gloss, matte and gloss lacquer combinations, papertouch, anti-fog lac)
- ✓ Backside printing
- ✓ Multiple film and barrier options (including high barrier aluminium packaging, retort, hot-fill pouches)
- ✓ Different size, color, style and material available
- ✓ Solvent and solvent-free lamination
- ✓ Professional suggestion as per your requirements

Doypack

Doypack also known as stand up pouch is a type of packaging manufactured from multi-laminate plastic films. It is one of the fastest growing flexible packaging formats and is a perfect solution for convenience-focused brands across multiple industries. Doypacks are the most adaptable and flexible type of packaging allowing you to customize the shape, size and materials in accordance with your product specifications.

We can produce your stand up pouch with or without ziplock, valve, handle or window.

Due to compact format and lower weight ratio, doypacks have gained significant popularity.

Our stand up pouches are suitable for different types of contents including liquids such as juice, sauces or personal care products, frozen food, tea and coffee, as well as candies, dry food, birdseeds, snacks, nuts, powders, spices and bath salts. Doypack packaging is eligible for food or non-food use and keep your product fresh.

Our stand up pouches are available in a wide range of barrier laminates helping to protect your products against air, UV radiation and moisture and allowing you to keep your products fresh for longer.

KEY FEATURES OF STAND UP POUCH:

- Doypack or K-seal styles
- Re-sealable with zippers
- Available with spouts
- Easy open cuts (tear notches)
- Aroma protection valve
- Euro-standard holes
- Carrying handle

A transparent window or transparent front side is also possible to enable your potential customers to take a look at the products.

●●● Flat Bottom

Flat Bottom Bags provide an additional space for the product inside, offer an outstanding on-shelf presentation as well as impressive look when horizontally.

Flat bottom gives maximum shelf stability even for lighter products such as coffee, tea, sugar, rice, cereals etc. Flat Bottom Bags have five panels of printable area for increased branding. Due to its unique design it helps you to save money for paying less for the space of supermarket's shelves.

In comparison to other more traditional types of packaging flat bottom reduces the weight of the packaging material and as a result reduces the amount of waste.

The packaging structure also utilises space more effectively, minimizes wasted space inside the package allowing extra volume for product in the pouch.

KEY FEATURES OF FLAT BOTTOM POUCH:

- Freestanding bag with flat bottom
- Box shape
- Excellent stability
- Five graphic panels
- Available with zippers, easy lock (Aplix), front zipper
- Degassing Valves
- Suitable for high-speed automatic filling
- Material efficient design

INNOVATIVE

SHELF
STABILITY

●●● Quad Seal Pouch

Quad seal bag or corner seal bag gets its name from the four corners of the panels being securely sealed together. Quad Seal Bags provide great on-shelf presentation and convenient storage. This type of packaging is suitable for packing large volumes of products between 100g and 20kg. Quad Seal Pouches are quite popular for packing various food items such as coffee, tea, sweets, sports nutrition, pet food and different types of snacks.

Increased Branding Space

The quad seal format has 4 separate graphic panels providing additional branding space to guarantee that all the important information about your product can be found on your packaging and your designs are not interrupted by back seals. The bottom of the Quad Seal Pouch is sealed and folded allowing it to easily stand up on the shelf.

The four-corner seal format offers great reinforcement, so you can fill your bags with more product. If you have limited shelf space instead of standard gusset bags we can produce your Quad Seal Bags with narrow gussets so that you can display more products on the shelf

KEY FEATURES OF QUAD SEAL :

- 4 corner format
- Built-in handle options
- Freestanding bag format
- Good clear graphic panels
- Wide choice of materials
- Suitable for heavyweight products
- Can be used for automatic filling

●●● Spout Pouch

Spout Pouches also known as fitment pouches due to ease of dispensing features are quite prevalent as a packaging option across many industries, mainly for liquid & semi – liquid products. This type of packaging is generally used for packing liquid products such as ketchup, sauces, mayonnaise, baby food, on-the-go fruit juices as well as liquid soaps, glass cleaning solutions, gels, powders and granulates.

Spouts and caps are available in many different styles and sizes providing the aesthetics and powerful branding that very few packaging types can offer. Spout Pouches have a bottom gusset that allows them to stay in a vertical position, they are an innovative and convenient alternative to rigid metal, glass and plastic bottles. Your customers can easily dose your product out of the pouch and close it after usage to prevent the spoilage and leakage of the product inside. Even after the pouch has been opened the resealable spout guarantees a long shelf life and easy storage of the product.

Spout pouches offer a powerful shelf impact that makes your products stand out from the range of rigid packaging currently on shelves, giving a big competitive advantage. Spouts for pouches can be inserted in the middle of the upper part of the pouch or to a pouch's top corner at 0 to 45 degree angle. The first type of pouch can be filled from the spout itself and then it will be sealed to close.

On the other hand in the second type of spout pouches filling the bag takes place through the unheated top of the bag, which must be welded after filling the pouch. We can deliver spouted pouches with the cap separated (removed).

The spout pouches need less space when transporting and storing, they are more environment friendly than plastic or glass bottles. We have all the necessary state-of-the-art equipment to manufacture your spouted pouches from start to finish, without outsourcing important stages of the production such as spout insertion. The automation technologies allow us control your pouches' quality throughout the entire process.

Spout Pouch Features :

- Various flexible pouch types
- Leakage-proof
- Re-closable spouts
- Non-breakage

PORTABLE

Custom Shape

Square shape is no longer the only packaging option for your products. If you want to differentiate your product from your competitors and stand out on retail shelves shaped pouches will be the best solution for you. Using the newest packaging converting equipment and advanced die-cutting technology, at our factory in Istanbul we can design and manufacture customized pouches of any shape you choose in order to meet your product marketing requirements and give you a strong competitive advantage. The shapes of your pouches can be customized according to your unique product requirements and specifications so that your product is more distinguishable on the shelf.

Whether you want your packaging to take the shape of your product or one of its ingredients we have all the capabilities and equipment at your disposal to produce the required shaped pouches in an effective and precise way.

Custom shape pouch is a unique and innovative packaging solution which helps you win new customers. Our team supports you throughout the entire process, from generating ideas for new custom shape pouch and developing the concept of your new packaging to manufacturing. Our team works hard so that your packaging looks both functional and attractive for potential consumers. Our experienced packaging engineers have helped many brands to turn ideas for shaped pouches into reality.

Different accessories can be also applied:

- Resealable zippers
- Rounded Corners
- Hang holes or euro slots
- Laser scoring
- Transparent window
- Degassing valve
- Built-in handles

●●● 3 Side Seal Pouch

Three Side Seal Pouches are qualitative and cost-effective flat pouches, that are sealed on three sides, with one side left open. According to your specific requirements, the pouch will be sealed on 3 sides and left open either at the top or the bottom of the bag where your product can be filled by hand or machine.

We supply three side seal pouches for a wide range of markets with materials suitable for your product's needs. Three side seal pouches are commonly used for single serve or small portion products such as spices, processed food, nutritional supplements, sea food, instant soups, tea, coffee, agrochemicals and others. Three side seal pouches can be produced in various sizes from small sachets of 5gms to 25 kg pouches.

KEY FEATURES OF THREE SIDE SEAL PPOUCHES :

- Sealed on three sides
- Top / Bottom open for filling process
- Ideal for high-speed runs or form fill seal (FFS) machines
- Round hole, euro slot and zippers available
- Tear notch option can be added for easy tearing
- Suitable for various products in both food and non-food industries

Tobacco is a moist sensitive product and for this reason the appropriate tobacco packaging should be chosen to ensure that the product retains its features and remains undamaged for a long time. We produce high quality tobacco bags that vary in terms of sizes, colors and shapes.

Each type of tobacco requires a different packaging specification. The right selection of quality tobacco packaging materials can guarantee a durable shelf life of the product inside it. Tobacco packagings produced at Maksipak are reliable and cost-effective, saving your business a generous amount of money.

Our Flexible Tobacco Packaging:

- Provides protection of tobacco packaged
- Flexible tobacco packaging we manufacture is not rigid, allowing you to display more products on the shelf
- Our flexible tobacco packaging is far less expensive to produce
- The weight of tobacco packaging is reasonably light, it helps you save on logistics costs

We use only high quality materials like LLDPE, PPE, BOPP and PE within the production process of our tobacco packaging bags to ensure that they are tear resistant and highly durable. Apart from it we combine different layers of metalized or aluminium foil lamination which helps to reach an excellent barrier against moisture, odors, light, oxygen and any other bacterial contamination and elongate the shelf life of tobacco.

We offer you several pouch styles to suit various product requirements. Depending on the type of packaging chosen some additional features can be applied such as zippers, transparent windows etc.

You can customize your tobacco packaging according to your needs. Sealed bags can withstand high and low temperatures with leakage-proof sealing.
