

SOLUTION OVERVIEW

Cyber Performance Center

AGILE

ADVANCE

40% of an enterprise security budget is spent on its people.

Are you making the most out of it?

The challenges

Bridging the gap between security and business objectives

More emerging, and continuously evolving cyber threats

Budget limitations and consolidation of tech stack

Workforce career paths put at risk by burnout and fatigue

Unclear readiness and skills of security teams

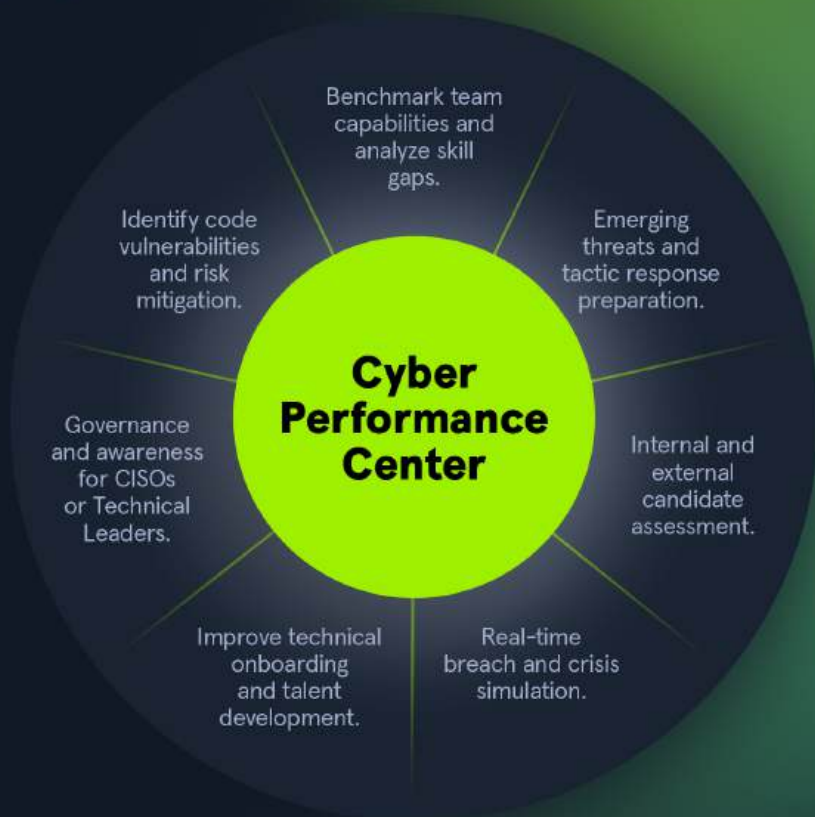

Difficulties to reach new professionals with validated skills

Our methodology

We provide a human-first platform creating and maintaining high-performing cybersecurity individuals and organizations.

How to **create & maintain** high performing cyber teams

Improved the Cyber Performance of

And more than 800+ companies and organizations

Unlock every team's full cybersecurity performance

with an evolving 360° journey for the novice and the expert

Academy

- Learn

Theoretical courses combined with hands-on assessments and lab exercises that mimic real-world applications and infrastructures, divided into skills and job roles.

Dedicated Labs

- Practice

Further develop theoretical concepts by focusing on specific attack types and threat vectors in a practical setting, ideal for offensive and defensive security teams to collaborate.

Professional & Cloud Labs

- Upskill

Bring all of your skills together by conducting a penetration test within a simulated, fully-patched enterprise environment bringing together multiple scenario and techniques.

Crisis Control

- Benchmark

AI-powered tabletop exercises for technical and executive teams assessing their response to a potential security incident.

LEARN

PRACTICE

UPSKILL

BENCHMARK

360°

CTF & Battlegrounds

- Benchmark

Great assessment and benchmarking of current skill and method to re-enforce current learning outcomes.

Talent Search

- Recruit & Retain

Find the right talent from HTB community of 2.5M+ members with validate skills and high performing mindset.

Testimonials

“ The analytics tools HTB provides are extremely helpful to me and my team. We can easily identify pain points and establish a buddy system to pair colleagues together to work through any challenges.

Kell Rozman, Cybersecurity Lead

“ We'd easily spend more than 100 hours setting up a single lab before HTB, not including everything that went along with it like licensing and hardware or cloud costs. Now it's done in no time, with content updates every month.

Dan Astor, Principal Scientist

“ We've eliminated the time spent in setting up lab environments, enabled participation in learning activities, increased voluntary time spent training cyber skills and seen a significant improvement of knowledge and skills across the team.

Firat Acar, Cybersecurity Research Lead

“ Our managers and the whole cybersecurity team supports and understands the adoption Hack The Box. We're being pushed to learn more, and they know these skills are a necessity. It's the way forward to get more skills on the team. And now people can better understand they need to get good at these, and their job is to continue learning.

Mihai Muresan, Cyber Security Specialist at E.ON

An organization's cyber posture begins and ends with its people.
If your people are prepared for anything, then so is your business.

Hack The Box is helping hundreds of security leaders across the globe to equip their teams with the skills and expertise they need to proactively secure and protect their organization.

Whether you're specializing team members, sharpening specific techniques, training up junior staff or looking to recruit skilled cybersecurity talent, Hack The Box delivers results – sooner.

Why? Because we help measure, assess and proactively close your organization's cybersecurity skills gap in a single platform focused on improving cyber performance.
