WOODEN CHEW STICK

The Wooden Chew Stick is designed specifically for dogs, made entirely from aged coffee tree wood, known for its high hardness and durability.

The production of Wooden Chew Stick involves two main stages:

01

Harvest and dry coffee wood. Select branches, divide them into suitable sizes to match the jaw size and chewing strength of individual dogs.

02

Carefully remove the outer bark layer, sand and smooth the wood until it meets quality standards.

The Wooden Chew Stick serves as a friendly, sturdy, and long-lasting toy, providing dogs with a healthy and safe chewing experience, satisfying their natural instincts.
