Biodegradable and eco-friendly: our Tofu litter is made from natural, renewable ingredients and is fully biodegradable, making it a more environmentally-friendly option compared to traditional clay-based litters.

Odor control: Our cat litter made from Tofu is highly absorbent and helps to effectively control odors by quickly trapping and locking in moisture and urine smells.

Soft and gentle: The soft, fine texture of tofu litter is gentle on a cat's paws and can be more comfortable for them compared to rougher clumping litters.

Low-dust: Tofu litter produces very little dust, which can be beneficial for cats and their owners with respiratory sensitivities.

Flushable and easy cleanup: All our tofu cat litters are flushable, which makes for easy and convenient disposal.

Really lightweight! The lightweight granules also make scooping and cleaning the litter box a simpler task.

COMPOSITION:

- 🇬🇧 Corn Starch 65%, Pea Fiber 30%, Edible Guar Gum 5%
- 🇫🇷 Amidon de maïs 65%, Fibre de pois 30%, Gomme de guar comestible 5%
- 🇩🇪 Maisstärke 65%, Erbsenfaser 30%, Essbares Quarkemehl 5%
- 🇪🇸 Almidón de maíz 65%, Fibra de guisante 30%, Goma guar comestible 5%

available in 5L, 10L and 15L

HOW IS TOBELOVED TOFU-BASED CAT LITTER PRODUCED?

In recent years, tofu-based cat litter has enjoyed considerable success with pet owners looking for sustainable, effective solutions for their feline friends.

As people become increasingly concerned about the environment, demand for eco-friendly alternatives has exploded, leading many to discover the countless benefits of tofu-based cat litter. Here's how our innovative cat litter is produced, the ingredients it contains and its benefits.

THE INGREDIENTS OF TOBELOVED TOFU CAT LITTER

To understand how tofu is made, it's important to understand how it's produced.

Derived from soybeans, tofu production begins by soaking and grinding these legumes to create soy milk. This mixture is then heated and treated with coagulants, such as magnesium chloride or calcium sulfate, which help the soymilk to curdle. Once the curd has formed, it is pressed into blocks, resulting in the tender, protein-rich food we know as tofu.

In addition to soybeans, tofu-based cat litter often contains other natural materials. These are natural binders that help maintain the litter's ability to clump together and improve odor control and absorption, ensuring a pleasant experience for cats and their owners alike.

SOURCING RAW MATERIALS

The quality of our tofu cat litter starts at the source. At TobeLoved, soybeans are sourced primarily from a variety of local and organic farms to ensure sustainability and high production standards. These sourcing practices not only support the local economy, but also reduce the carbon footprint associated with long-distance transport.

CREATING TOFU

Once the soybeans have been harvested, the production process takes place in several stages:

1. Preparation: The dried soybeans are soaked in water, allowing them to expand and soften.
2. Grinding: The soaked beans are then ground to obtain a creamy soy milk.
3. Cooking: This soymilk is boiled to improve flavor and digestibility.

4. Coagulation: Coagulants are added to curdle the soymilk, resulting in the formation of curds.

5. Pressing: The curds are collected and pressed to remove excess liquid and form solid blocks of tofu.

PROCESSING INTO CAT LITTER

Once tofu production is complete, the next step is to transform the tofu into cat litter.

THIS PROCESS INVOLVES

1. Drying: Tofu blocks are dried to remove moisture and improve their absorbency.
2. Grinding: Once dried, the tofu is ground into small granules, creating a fine texture that is both gentle on paws and effective for clumping. Depending on the fineness of the grind and the quality of the raw material obtained, absorption rates vary greatly from one litter to another.

ADVANTAGES OF TOBELOVED TOFU-BASED CAT LITTER

ECOLOGICAL BENEFITS

One of the main attractions of tofu-based cat litter is its ecological footprint. Unlike conventional cat litters made from clay or synthetic materials, tofu litter is 100% biodegradable, decomposing naturally and contributing to soil health.

This sustainable approach resonates with environmentally-conscious consumers keen to minimize waste.

HEALTH AND SAFETY

Tofu litter also promotes the health and safety of pets and humans. Made from non-toxic, natural ingredients, it poses no risk to pets, reducing the risk of ingestion or dust-related respiratory problems. We strive to maintain a high level of quality so that our loyal customers choose a product that matches their values.

ODOR CONTROL AND ABSORBENCY

When it comes to performance, our TobeLoved tofu-based cat litter excels. Its natural properties give it superior absorbency, effectively locking in moisture and controlling odors far better than traditional cat litters.

For pet owners, this means a cleaner environment and a fresher home.

QUALITY CONTROL MEASURES STANDARDS AND TESTING

To guarantee the quality of tofu cat litter, rigorous testing and compliance with industry standards are essential.

The entire TobeLoved team is committed to thorough quality assurance processes that involve routine checks on ingredient purity, moisture levels and litter efficiency.

This regular and rigorous process enables us to guarantee a product of the highest quality, in line with our customers' values and expectations.

In conclusion, the production of our tofu-based cat litter represents an innovative step forward in sustainable pet care.

From its origins in the meticulous sourcing of soybeans to the meticulous production processes that result in a high-performance product, tofu litter represents a promising alternative to traditional materials.

With its eco-friendly attributes, health benefits and exceptional performance, it's no wonder that tofu litter is carving out an enviable place for itself on the market.

We offer our tofu cat litter in two absorbency levels, 300% or 400%, with or without activated carbon for even greater odor control.

If you're considering switching to a more sustainable, safer and more efficient litter option, explore the world of TobeLoved's GoGreen collection.

Your cat and the planet will thank you.

Discover the range of options available and make an informed choice for a cleaner, greener home.

CAT LITTER
FOR CATS - KATZENMISCH
EINE SAMMELN FÜR KATZEN

370%
COFFEE

*Cat litter made with love
from ground coffee bark*

GOGREEN
COLLECTION

The Tobeloved® brand offers cat litters made primarily from repurposed coffee grounds, a readily available by product from coffee production that would otherwise be waste. Tobeloved® collects and carefully processes the used grounds, drying and treating them to create a highly absorbent, odor-controlling litter material.

Compared to traditional clay litters, Tobeloved's coffee ground-based litters are exceptionally absorbent, trapping liquid waste and controlling odors more effectively. This is due to the porous structure of the coffee grounds, which soak up moisture and odor-causing compounds. The Tobeloved® litters are also fully biodegradable and compostable, making them an eco-friendly, sustainable option.

An added benefit is that the natural caffeine and compounds in the coffee grounds can help deter cats from scratching or resting in areas with the litter, discouraging them from going outside the box. The natural, earthy scent is also appealing to cats and helps mask unpleasant odors. Overall, Tobeloved® provides a functional, pet-friendly alternative to conventional clay litters.

COMPOSITION:

- 🇬🇧 Coffee grounds 75%, Corn Starch 20%, Edible Guar Gum 5%
- 🇫🇷 Marc de café 75%, Amidon de maïs 20%, Gomme de guar comestible 5%
- 🇩🇪 Kaffeesatz 75%, Maisstärke 20%, Essbares Guarkernmehl 5%
- 🇪🇸 Café molido 75%, Almidón de maíz 20%, Goma guar comestible 5%

available in 10L

All you need is
Tobeloved

Close Guard

All Tobeloved cat litters from the GoGreen Collection allow rapid absorption and drying of your litter, limiting the spread of bacteria.

The good natural smell, without any chemical and artificial additives, reduces terrible odors.

Most of these cat litters are virtually dust-free, provide a pleasant feeling, and won't stick to your pet's paws.

The properties of our cat litters ensure a much higher absorption rate than conventional litter.

Choosing Tobeloved is choosing a quality product for your animal's well-being.

Organic

Nature inspires us!

We get all the benefits that nature brings to our Tobeloved cat litters without altering their composition or their incredible urine and odor absorption properties.

Our totally ecological litters are natural and can be flushed down the toilet as they dissolve very easily in water.

The entire Tobeloved team cares about our environment and develops products that respect the delicate balance between man and nature.

This helps reduce pollution and waste which are harmful to our ecosystem.

For Change

Our ecological and social approach turned 100% toward protecting & preserving the environment, and the local population allows us to save what the planet has best to offer us.

At Tobeloved, we have a great sense of responsibility towards these natural resources; All products from the GoGreen Collection range are developed in such a way as to be in harmony with nature and interconnected with the environment.

Let's respect and protect nature; it has so many things to teach us.

GOGREEN
COLLECTION

350%
CASSAVA
+ Activated Carbon

THE ADVANTAGES OF THE ACTIV CARBON:

Adding active carbon to cat litter can help control odor and moisture in the litter box. Active carbon has a strong adsorption capacity that absorbs and neutralizes unpleasant smells and odors.

This can lead to a fresher and more pleasant environment for both the cat and its owner. Additionally, active carbon can also help to reduce the amount of moisture in the litter, making it less likely for bacteria and fungi to grow.

By controlling both odor and moisture, active carbon can help promote a healthier litter box environment.

COMPOSITION:

-  45% Cassava starch, 40% Corn starch, 8% Water, 5% Activated carbon, 2% Deodorant
-  45% Amidon de manioc, 40% Amidon de maïs, 8% Eau, 5% Charbon actif, 2% Déodorant

the best is yet to come

GoGreen Collection:

The widest range of eco-friendly cat litters in the world!

To be
Loved

The advantages of eco-friendly cat litters made from biodegradable, compostable and renewable natural materials are considerable:

They reduce environmental impact by avoiding waste and chemical pollutants.

They are biodegradable and compostable, making them easy to recycle and reducing waste.

They are often made from renewable materials, such as plants and natural fibers.

They produce less odor and dust than traditional cat litter, which improves air quality.

They are generally soft and comfortable for cats' paws.

They offer a sustainable and responsible solution for cat owners wishing to minimize their environmental impact.

300%
CORN

Corn-based litter is made from corn residues, such as stalks and leaves, which are collected and ground into a fine powder.

This powder is then mixed with other ingredients, such as natural fibers, to create an absorbent blend.

The mixture is then formed into granules or balls.

Corn-based litter is environmentally friendly because it's made from corn waste, reducing agricultural waste and the use of natural resources.

It is also biodegradable and compostable, allowing for a final recycling phase and a reduction in litter life-cycle waste, summing up the entire TobeLoved® philosophy.

THIS MILLET-BASED CAT LITTER OFFERS MANY ADVANTAGES, INCLUDING NATURALNESS AND BIODEGRADABILITY:

Made from vegetable matter, it's gentler on the environment and can be composted.

Virtually dust-free:

Compared with clay litter, TobeLoved® millet-based litter produces less dust, which reduces respiratory problems for cats and humans.

Good odor control:

The combination of millet and other natural ingredients effectively absorbs and neutralizes odors.

Promotes sustainable agriculture:

By using millet grass, farmers can promote sustainable agriculture and reduce waste.

GOGREEN
COLLECTION

Our millet-based cat litter is made from pennisetum purpureum (millet).

Harvesting: Millet grass is harvested and processed into pulp or powder.

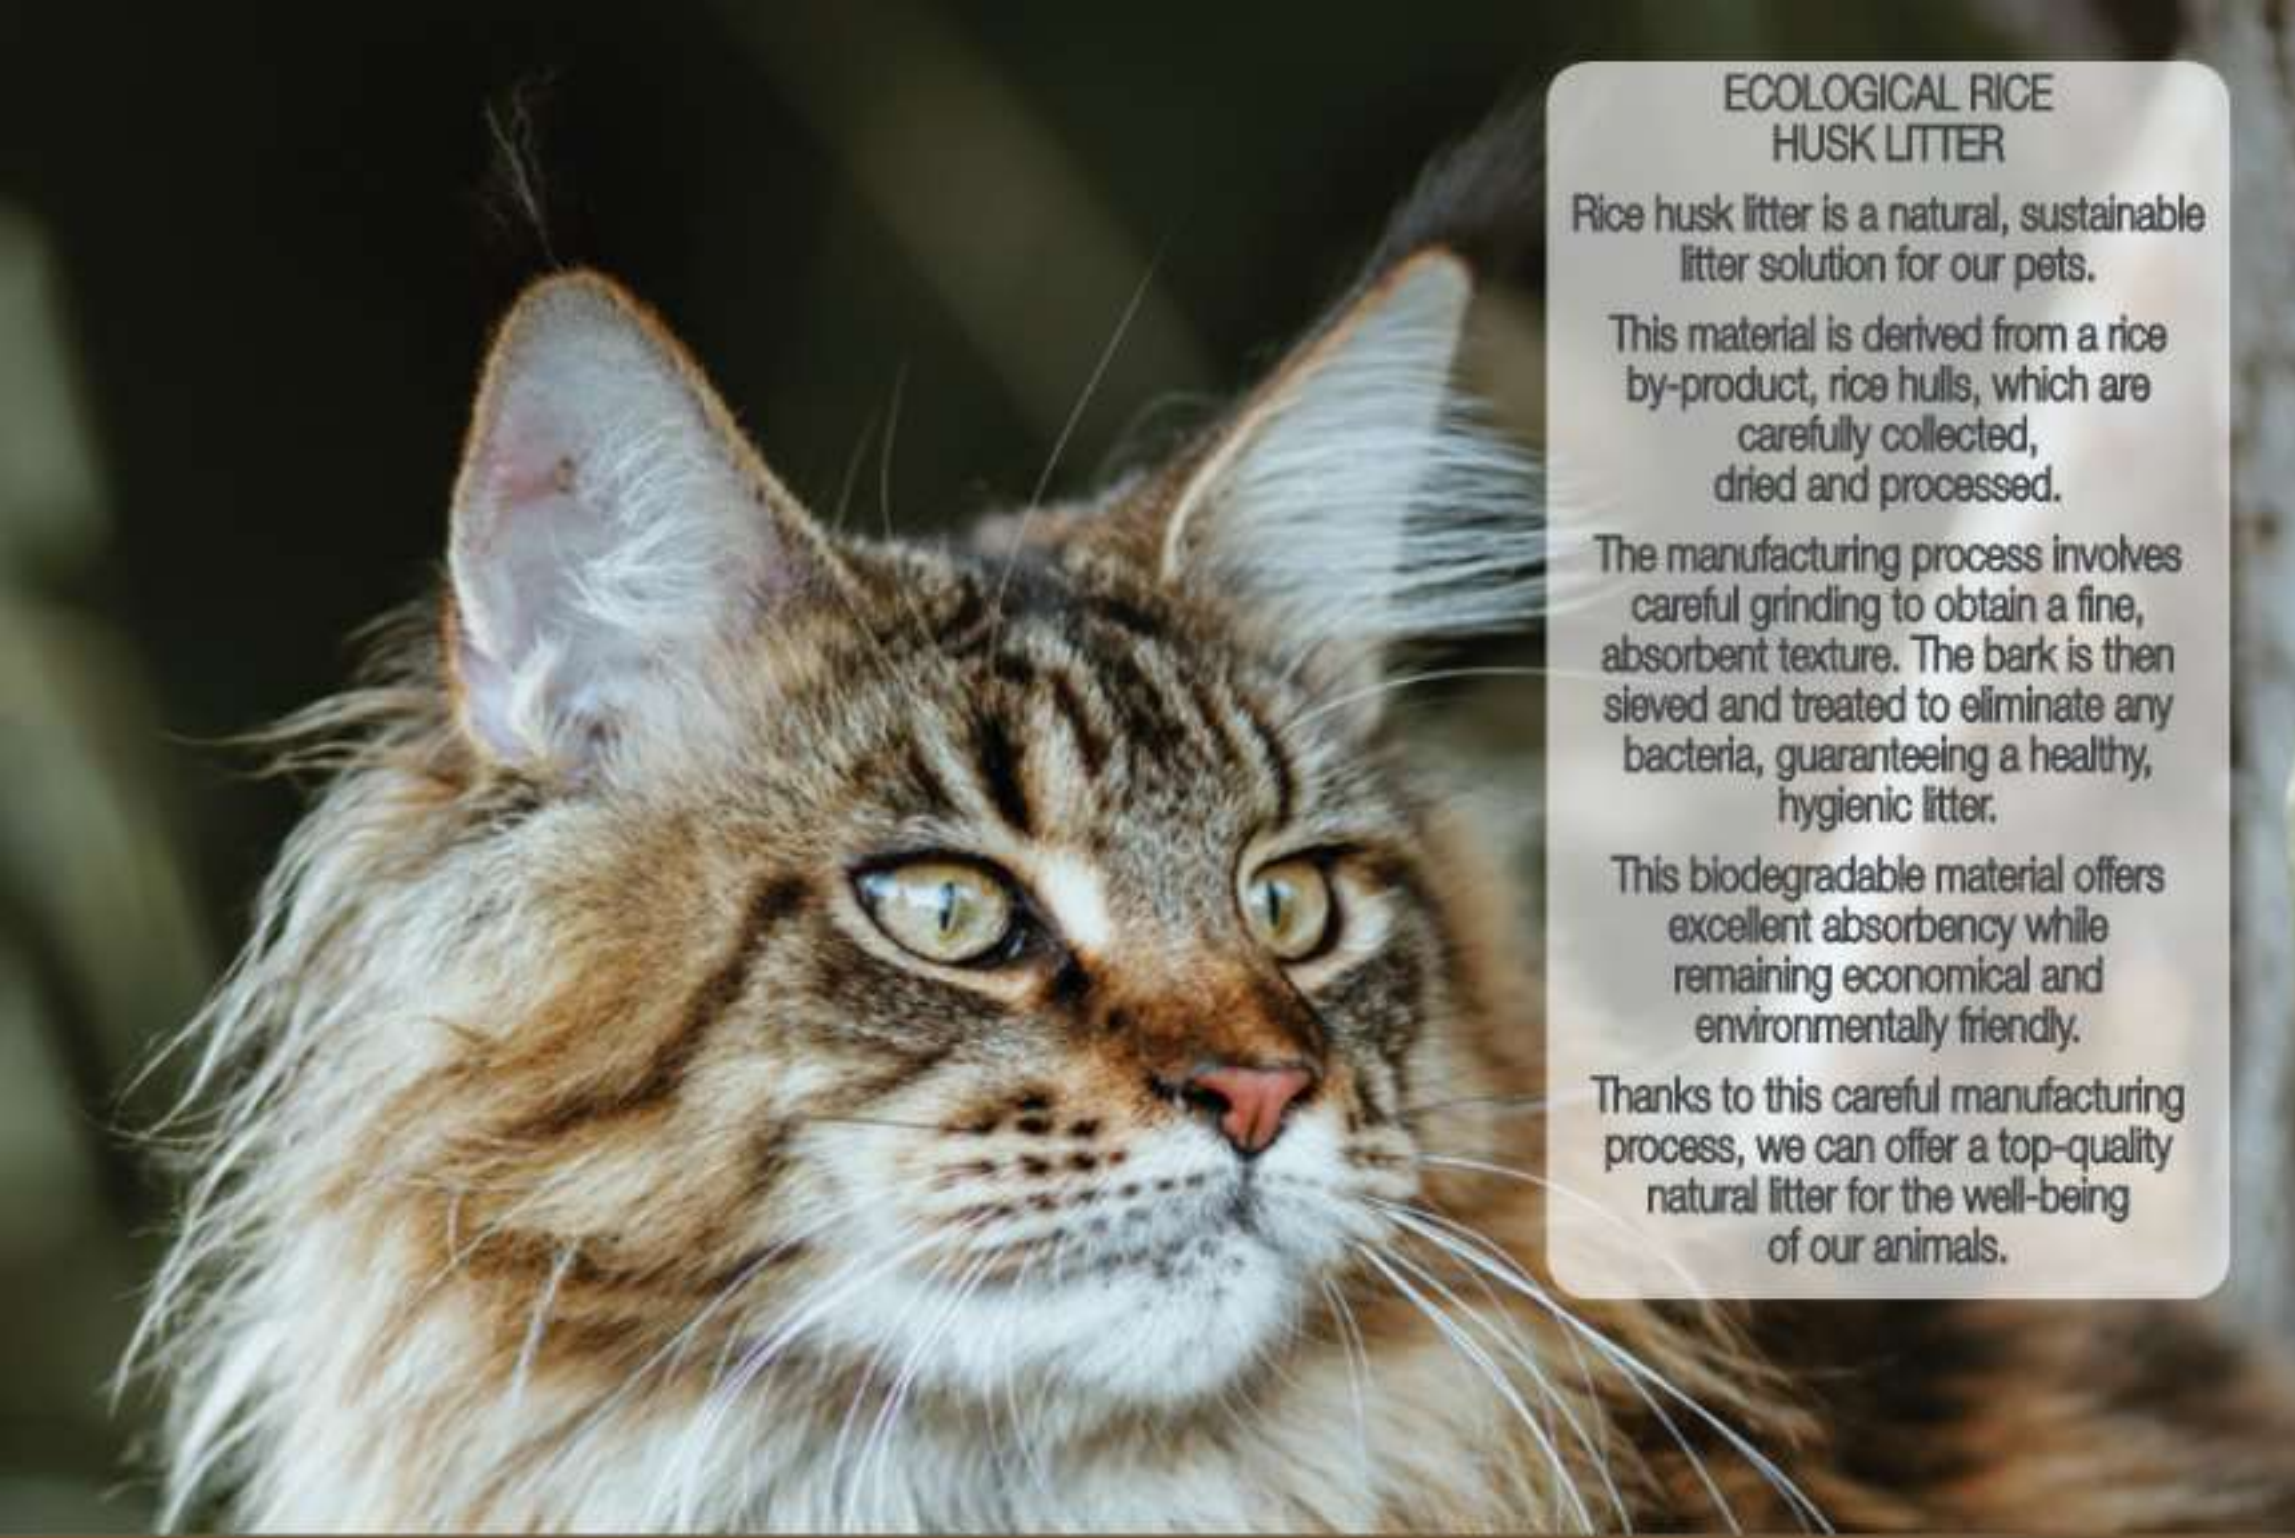

Blending: Millet pulp or powder is blended with other natural ingredients to improve absorption and odor control.

Granulation: The mixture is then transformed into small granules, which are dried to remove excess moisture.

Sieving: The granules are sieved to remove any lumps or large particles.

Packaging: The final product is packaged from recycled materials and ready for use as natural, biodegradable cat litter.

300%
MILLET

ECOLOGICAL RICE HUSK LITTER

Rice husk litter is a natural, sustainable litter solution for our pets.

This material is derived from a rice by-product, rice hulls, which are carefully collected, dried and processed.

The manufacturing process involves careful grinding to obtain a fine, absorbent texture. The bark is then sieved and treated to eliminate any bacteria, guaranteeing a healthy, hygienic litter.

This biodegradable material offers excellent absorbency while remaining economical and environmentally friendly.

Thanks to this careful manufacturing process, we can offer a top-quality natural litter for the well-being of our animals.

Our Pea husk cat litter is an innovative and sustainable alternative to traditional clay-based litters. Made from the discarded husks of peas, a renewable agricultural byproduct, pea husk litter offers several advantages.

Firstly, it is highly absorbent, quickly trapping odors and moisture. This helps maintain a fresher-smelling litter box for longer.

Secondly, pea husk litter is biodegradable and compostable, making it an eco-friendly choice that reduces waste.

Additionally, it is free from synthetic chemicals, providing a natural and non-toxic solution for cat owners.

The production process is straightforward, involving the collection and processing of pea husks, which are then packaged and distributed as a premium cat litter.

This sustainable approach helps to minimize environmental impact while providing a high-performance litter for cats and their owners.

ECOLOGICAL PINE LITTER: THE RESPONSIBLE CHOICE FOR YOUR CAT

At TobeLoved®, we're passionate about the natural virtues of pine. That's why we've developed a wide and varied range of 100% ecological cat litter products, all made from this emblematic species.

A sustainable, renewable raw material

Our pine comes from responsibly managed forests (FSC standards), with no deforestation. Thanks to this sustainable management, pine becomes a renewable raw material, ideal for creating natural, eco-friendly cat litter. It's a virtuous choice for your cat and for the planet.

Environmentally-friendly manufacturing processes

At TobeLoved®, every stage in the manufacture of our pine-based litters is carried out with the utmost care, in a constant concern to preserve the environment.

After the trees have been cut, the wood is carefully ground and pressed to produce a durable, absorbent product. Our entirely mechanical manufacturing processes avoid the use of chemicals.

As a result, our natural pine-based litter provides optimum comfort for your cat, while preserving the planet.

You can have peace of mind when you choose TobeLoved®!

A high-quality product, from pine to packaging

At TobeLoved®, we're proud of our pine-based litter, which combines performance, economy and respect for the environment. From the rigorous selection of our raw materials to the final packaging, every step is carried out with the utmost care to guarantee impeccable quality.
