This also applies to products already on order provided that such alterations can be made without subsequential changes being necessary in specifications already agreed.

G5 HIGH PROFILE UNIT COOLER

SERIES APPLICATION CAPACITY

FNR - Medium Temperature: 11.9kW ~ 77.9kW
FLT... P - Medium Temperature with Partial Defrost: 7.6kW ~ 47.6kW
FLT - Low Temperature: 5.4kW ~ 33.0kW
Effective Air Throw: 24.1m ~ 30.9m

G5HP.2205.V3.0

EDEN HEAT EXCHANGERS GREEN PROGRAM COOL SOLUTION

WELCOME TO EDEN!

Eden has made "Green Program" a timeless mission, constantly using revolutionary green technology and aided customers around the world to solve the increasingly competitive environmental challenges.

Eden adopts compact and energy efficient design that has significant advantages in heat transfer technology.

Eden has accumulated rich experience in various applications, providing customers with customised refrigeration solutions and services by improving efficiency and reducing costs.

SPECIFICATIONS

Variety of specifications that go into the production of Eden unit coolers, such as temperature range, fin spacing, defrosting method and refrigerant.

MT - Medium (Above 0°C)
PD - Partial Defrost (-8°C ~ +2°C)
LT - Low (-32°C ~ -10°C)

4 - 4FPI (6.35mm)
6 - 6FPI (4.23mm)

A - Air Defrost
E - Electric Defrost
H - Hot gas

HFC (R404A, R507, R22...)
CO2 (On request basis)

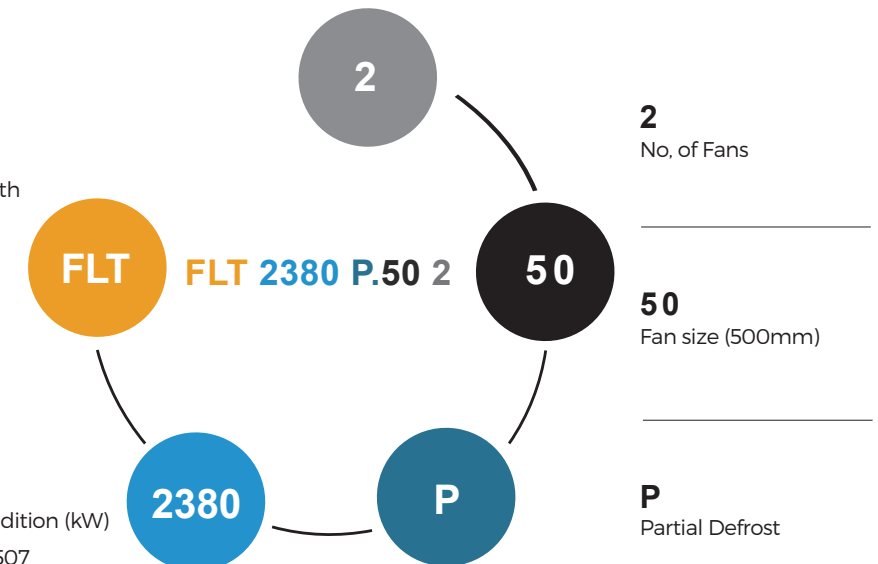

NOMENCLATURE

FLT

FNR - Medium Temperature
FLT...P - Medium Temperature with Partial Defrost
FLT - Low Temperature

2380

Capacity
Based on ET = -10°C, RT = -4°C condition (kW)
2380 = 23.8kW at 6KTD, R404A/R507

ADVANTAGES

- Provide higher efficiencies and capacities
- Optimize for reduced energy consumption
- Lower operational cost
- Compatible with the latest refrigerants
- Compact and sophisticated outlook
- New and improved Refrigerant Distributor

QUALITY ASSURANCE

- ISO9001 Certification
- International Accreditation Forum
- China National Accreditation Service
- CE certification

GENERAL FEATURES

Eden G5 High Profile Unit Cooler Series is specifically engineered for the commercial and light industrial refrigeration suitable for chiller and freezer cold rooms applications.

Compact Design

Easier installations
Suitable for compact spaces

Fins

High grade Aluminium (AA1100 Standard)
Double Sine Wave Pattern & Rippled Fin Edges
Maximum fin surface and higher heat transfer coefficient

Refrigerant

Latest refrigerants
(CO2 & NH3 on request basis)

Refrigerant Distributor

Uniformly distributed refrigerant
Optimised the performance of the TXV
Maximised coil capacity

Inner Grooved Tubes

Increases internal surface area whilst having a low oil film coefficient
Higher efficiencies and capacities
JIS-C1220T

Defrosting

Electrical sheathed stainless-steel heating elements with vulcanised rubber connections
Centrally positioned drain outlet

Casing

High quality powder coated Aluminium (AA1100 Standard)
Excellent weathering resistance

Electrical Junction Box(es)

3mm thick ABS, IP56 protection
rating with flame class V-0

With IP56 Rating

Hinged Side Panels

Easy access and service of components without
removing the panels

Capacity Rating

Thermally guaranteed and tested in
accordance with ASHRAE dry box standards

Fan Motor

High quality German fan motors
Thermistor motor protection
DIN 40050 safety standards
Long life and durability

German Fan

Quality Assurance

ISO 9001 Certification •
International Accreditation Forum •
China National Accreditation Service •
CE Certification •
One (1) Year Warranty (Terms and conditions apply) •

+ Options available at Page 13-15
Logo had been repositioned for illustration purpose

EDEN G5 HIGH PROFILE UNIT COOLER SERIES

G5 High Profile

It is developed on a compact coil platform using Eden's in-house Smart Circuitry Program. Coil efficiencies and cooling capacities were improved, allowing maximum mass flow rate of refrigerant to be evenly distributed throughout the evaporator.

Compact Design

Compact design reduces dimensional volume to enhance cold room productivity without losing cooling capacity. It is suitable for compact spaces and is also easier to handle during installations.

Casing

Casing is made from high quality powder coated Aluminium, according to AA1100 Standard. The coating which made from carboxyl polyester resin has excellent weathering resistance.

Hinged Side Panels

Both side panels with hinges, created to allow easy access and service of components without removing the panels.

Inner Grooved Tubes (IGT)

Eden coils use copper Inner Grooved Tubes (IGT) that increases the internal coil surfaces whilst having a low oil film coefficient thus providing higher efficiencies and capacities. These copper tubes are in accordance with JIS-C1220T Standard.

Refrigerant Distributor

Eden has enhanced the unit cooler with new distributor, ensuring refrigerant flow from the thermostatic expansion valve (TXV) is uniformly distributed into each circuit of the multi-circuit coil, optimising the performance of the thermostatic expansion valve and maximising evaporator coil capacity.

Refrigerant

Eden G5 High Profile Series can also be applied with most new generation refrigerants (CO2 & NH3 on request basis). All Capacity Ratings in this document are thermally guaranteed by Eden and tested in accordance with ASHRAE dry box standards.

Electrical Junction Box(es)

Electrical junction box(es) are 3mm thick ABS, IP56 protection rating with flame class V-0 and are mounted internally.

Fins

Fins are produced from high grade Aluminium (Aluminium Association - AA1100 Standard) with Double Sine Wave Pattern and Rippled Fin Edges for maximum fin surface and higher heat transfer coefficient from primary to secondary surfaces.

Defrosting

Defrosting is by electrical sheathed stainless-steel heating elements with vulcanized rubber connections to ensure effective defrosting and durability. Water resulting from defrosting is channelled to the drain pan with a centrally positioned outlet for positive draining from all points.

Fan Motors

Fan Motors used in all models are high quality German fan motors, fitted with thermistor motor protection and conform to DIN 40050 safety standards. Fan motors are of the highest quality offered in the industry ensuring long life and durability for low temperature applications.

Quality Assurance

Eden G5 High Profile Series comes with Quality Assurance as they are designed, manufactured and tested at our factory with ISO9001 certification. It also comes with a One (1) Year Warranty against quality & manufacturing defects (Terms and conditions apply)

[Packed Dimensions / Weight]

Please refer page 15 for the Dimensional Drawings

Application & Correction Factor Guidelines

FNR Capacity Correction Graph

Capacity Ratings & Conditions

All Eden Heat Exchangers are tested in Accordance to ASHRAE Dry Box Standard (Recommended for Asia Usage)

ASHRAE Condition - Air Inlet Temperature = +3°C and Evaporating Temperature = -5°C

EUROVENT Data is used for Comparison Purposes

*EUROVENT Data is based on SC2 Nominal Capacity

SC2 Condition - Air Inlet Temperature = +0°C and Evaporating Temperature = -8°C

**Air Throw indicated is the distance from the unit to the furthest point where an air velocity of 0.5m/s can still be measured

Refrigerant / Capacity Multiplier Table

Refrigerant	Capacity Multiplier
R134A	0.986
R22	1.011
R404A/R507	1.000
R407B	0.961
R407C	0.940
R407F	1.011
R448A	1.030
R449A	0.930

Selection Example

Application : Yam Storage room

Required Room Temperature : +16°C

Ambient : +35°C

Required KTD : 12KTD (Or 70%RH)

Required Cooling Capacity (Inclusive of the fan and heater load) : 20kW (ASHRAE)

Type of Refrigerant : R134A

- 01

Determine the Correction Factors and Multiplier (Refer to page 7)
a. Since 12 KTD is required; thus the ET is found to be:
ET = RT - KTD = 16°C - 12KTD = 4°C
b. Capacity Correction Factor is Approximately 1.22 (ET -5°C → 4°C, refer to Correction Graph)
c. Refrigerant multiplier = 0.986 (R404A → R134A, refer to Table)
- 02

Calculation of required capacity at ET = 4°C (@12KTD)
20kW ÷ 1.22 ÷ 0.986 = 16.6kW
(Inclusive of the fan and heater load)
- 03

Calculate the unit cooler capacity needed at 8KTD
16.6kW ÷ 12 x 8 = 11.1kW
- 04

Hence FNR 1190.501 is the selected unit cooler for the above application.
- 05

To check if selected model FNR 1190.501 will achieve at least 20kW for the above application:
Capacity = 11.9kW x 1.22 x 0.986 ÷ 8 x 12 = 21.5kW (For R134A, 12KTD, ET = 4°C)
Hence, FNR 1190.501 with cooling capacity of 21.5kW is adequate for this application.

Capacity Ratings & Conditions

All Eden Heat Exchangers are tested in Accordance to ASHRAE Dry Box Standard (Recommended for Asia Usage)

ASHRAE Condition - Air Inlet Temperature = -19°C and Evaporating Temperature = -25°C

EUROVENT Data is used for Comparison Purposes

*EUROVENT Data is based on SC3 Nominal Capacity

*SC3 Condition - Air Inlet Temperature = -18°C and Evaporating Temperature = -25°C

**Air Throw indicated is the distance from the unit to the furthest point where an air velocity of 0.5m/s can still be measured

Selection Example

Application : Ice Cream Freezer

Required Room Temperature : -25°C

Required KTD : 7KTD (Or 87.5% RH)

Required Cooling Capacity (Inclusive of the fan and heater load) : 12kW (EUROVENT)

Type of Refrigerant : R407F

01

Determine the Correction Factors and Multiplier (Refer to page 11)
a. Since 7 KTD is required; thus the ET is found to be:
ET= RT - KTD = -25°C - 7KTD = -32°C
b. Capacity Correction Factor is Approximately 0.88
(ET -25°C → -32°C, refer to Correction Graph)
c. Refrigerant multiplier = 1.011
(R404A → R407F, refer to Table)

02

Calculation of required capacity at ET= -32°C (@7KTD)
12.0kW ÷ 0.88 ÷ 1.011 = 13.5kW (Inclusive of the fan and heater load)

03

Calculate the unit cooler capacity needed at 7KTD
13.5kW ÷ 7 x 7 = 13.5kW

04

Hence a FLT 1150.502 is the selected unit cooler for the above application.

05

To check if selected model FLT 1150.502 will achieve at least 13.5kW for the above application:
Capacity: 14.08kW x 0.88 x 1.011 ÷ 7 x 7 = 12.5kW (For R407F, 7KTD, ET = -32°C)
Hence, FLT 1150.502 with cooling capacity of 12.5kW is adequate for this application.

OPTIONS

The following options and accessories are available to enhance the performance and operation of Eden unit coolers.

Casings

Support Legs
Support legs are offered to facilitate the installation of unit coolers

SS304 Casing
This is a popular and commercial grade stainless steel sheet metal that is ideal for kitchen appliances

SS316 Casing
Marine grade stainless steel 316 sheet metal is used primarily for its high corrosion resistance

Defrosting

Eden provides a variety of defrosting methods, such as hot gas, water, air and electric; all of which may be used individually or in various combination.

Water Defrost

Hot gas Defrost

Combination hot gas coil / heater at drain pan

Fins

Coil Dipped Epoxy Fins
Coil-Dipped Epoxy Fins are epoxy-based. It helps to increase coil durability, minimise cleaning, service maintenance costs and maximise the operating life of fin and tube surface.

Copper Fins
Copper Fins possess higher thermal conductivity, corrosion resistance and strength than aluminum fins. It is ideal for harsh environments.

Epoxy Fins
Epoxy Fins protect against corrosive agents and severe environments.

Blue Fins
Blue Fins prevent corrosion from the accumulation of salt, acid deposit and water droplets.

Fan

EC Fan
Improved motor efficiency and variable fan speed control when require

Single Phase Fan
High performance single phase fan motor

Full Venturi
Optimum coil side performance

Explosion Proof
Ideal for explosive environments

SS304 Fan Grill
Easy cleaning and longer functional life

Coil

Eden's coil selection program allows coils to be customized to meet the needs of most applications.

Chilled Water Coil
(Model End With - W)

External re-heat coil

Internal Re-heat Coil
(Model End With - RH)

Brine/Glycol
(Model End With -BC)

Distributor Connection
on Right

Fin Spacing

Fin spacing depends strongly on boundary conditions of the storage system.

Components

The following components are available for installation on Eden unit coolers.

Fin Spacing 8,9,10mm (Custom-made)

Fitted with EVD

Fitted with TXV

Fitted with Thermostat sensor

Accessories

Eden's accessories are designed, tested and approved for use with Eden unit coolers.

Insulated Drain Pan

Collar Heater

Welded Drain Plug

Streamer / Guide Vane

DIMENSIONAL DRAWINGS

A*: Minimum distance required for heater replacement (Not applicable to FNR model)
Please refer to page 7-12 for the dimensional details.

RELATIVE HUMIDITY %RH VS KTD

The Relative Humidity %RH vs KTD of a concrete substrate can be a determining factor in the success or failure of product selection. Tables applicable to all Selection examples, but it will still be adjusted according to the practical situation.

Products	Storage Temperature °C	Recommended RH%
Madarins	4	90 - 95
Avocados	7 to 13	85 - 90
Banana,Green	13 to 14	90 - 95
Yams	16	70 - 80
Bean sprouts	0	95 - 100
Pears	-1.5 to 0.5	90 - 95
Cherries,sweet	-1 to 0.5	90 - 95
Coconuts	0 to 1.5	80 - 85
Dates,Frozen	-18	75
Ice cream	-25	85
Poultry,Frozen	-18	85
Seafood,Frozen	-18	75

Recommended Storage temperature and RH% (USDA,1987)

Relative Humidity %	Temperature Difference(KTD)
60	16
