

# Managed Security with MXDR

Detect threats. Respond around the clock.

G DATA MXDR combines advanced threat detection with 24/7 monitoring and response by a Security Operations Center in Bochum. Leopold Netzwerke supports deployment and ongoing operations.

- Detect and respond - AI-based behavioural analysis and experienced analysts complement endpoint protection.
- Integrate security - We connect MXDR with your firewalls, email protection and Backup & Recovery.
- Restore operations - If systems need to be cleaned or restored, we support the follow-up work as your IT partner.

XDR is also available when you or your IT partner manage detection and response. We help you choose the right approach.

## Let's talk about your IT.

Book an initial consultation: your current protection and the right next steps.
