

Connecting based on the circular principle

Our family-owned company develops innovative connectors for window construction, furniture making, and even timber construction using sustainable and, in some cases, renewable materials that are easy to assemble and disassemble. With the resulting connection systems, we at Knapp Connectors implemented the circular principle long before the term even existed.

For architecture to have a future, it must be resilient. It must be sustainable, made of materials capable of circular use, climate-friendly, and adaptable to new requirements. This requires connection systems that meet the demands of repurposing, reuse construction, and circular building. With this goal in mind, we have developed an extensive range of connection systems that can creatively, circularly, and sustainably solve diverse construction and structural tasks.

Knapp Connectors are easy and quick to assemble in prefabrication, swiftly placed on-site, and easily dismantled. They are reusable, recyclable, and upcycling-capable, allowing building components from furniture to building envelopes to be effortlessly modified, taken apart, and rebuilt as needed. The materials are high-quality, durable, and, for example, the wood construction nail Mateo and the bed frame connectors SOLID, even partially made from renewable resources.

Therefore, Knapp is the ideal partner for circular and resilient architecture and for future-proof planning and construction processes. We take pride in every project that our customers have built and crafted using our connectors.

And we are excited to present all our systems at the trade fair stand at the Fensterbau in Nuremberg and to support you with details and tips for your projects.

Be inspired by RICON®, DEKCLICK®, FIYU® & more. And join us in staying ahead of time. Knapp Connectors supports you in this. We bring our new catalog – which you can pick up from us.

We introduce our new fiber-reinforced KNAPP adhesive PU+ fiber-reinforced – here you can pick up a sample cartridge.

Also, don't miss our trade fair promotion: The connectors FIYU® FAST, LOCK for a 14mm groove, and FAST for the 4mm groove at a special price!

A visit to us is worthwhile - the Knapp team awaits you in Hall 4, Stand 150.
