

# FENCE SYSTEMS

## ADVANTAGES

All fencing panels are produced using modern equipment:  
Welding Ideal Work Germany  
Paint shop Wagner Italy.

The quality of the painting line corresponds to the European level:  
painting is carried out using Italian equipment - Wagner,  
5 degrees of cleaning, additional OXILAN nano-coating provides high  
corrosion resistance.

New European Certified laboratory, salt spray chamber, which can  
test the quality of our products and can guarantee corrosion  
resistance for more than 10 years.

We are a manufacturer of galvanized wire from which we  
produce sectional fencing, which allows us to control quality at  
all stages of production.

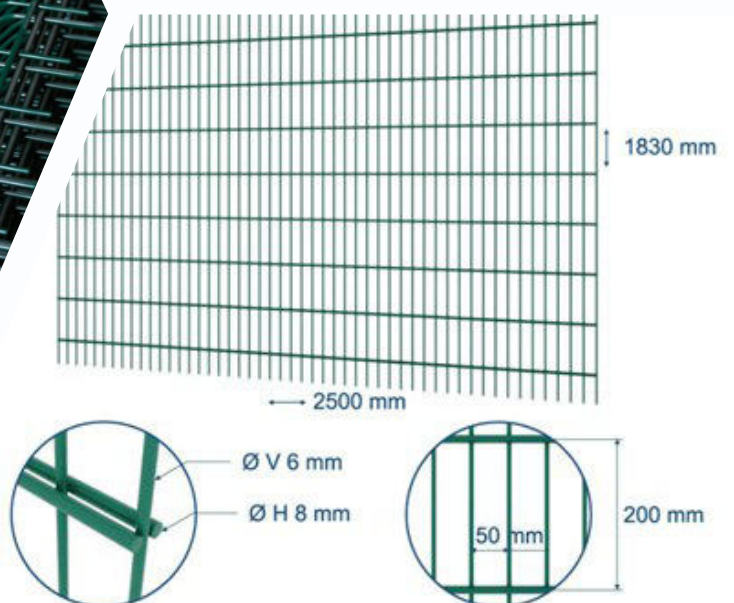

We produce galvanized wire with dense zinc, aluminum zinc,  
from diameter 6.0 mm to 9.0 mm for fencing panels.

Thanks to our favorable geographical location and  
professional team, we can quickly deliver panel fencing to  
your warehouse.

## THE BEST QUALITY PRODUCTS

Contact us to discuss all commercial  
and technical issues in detail

## QUALITY OF PROCESSING:

The corrosion resistance of sections is increased 5 times thanks to special processing of galvanized wire using OXSILAN technology

## WELDING QUALITY:

Welded joints are made using technology that allows maximum preservation of the zinc layer in the welding areas. Correspondence of wire thicknesses to the stated ones, high impact strength of the panels

## FENCE

- summer cottages and private urban households
- territories of HOAs and housing cooperatives
- territory of kindergartens and schools
- territories of railway and bus stations, airports
- playgrounds and sports fields
- parks
- parking for various types of transport
- stadiums and sports complexes
- football fields and tennis courts
- pet enclosures
- production areas and warehouse complexes
- farms, greenhouses and pastures
- sensitive facilities requiring enhanced security
- Nuclear power plants, state district power plants, etc.
