

Energinet

Energy and sustainability
monitoring covering the
entire value chain from
sensors to reports.

Energinet is our market-leading energy management system (EMS). It helps you get control of your energy, waste and environmental reports to reduce costs reduce environmental impact and improve overall efficiency.

Unlock insights through powerful visualization

We have designed **Energinet** to provide simple installation and user-friendly reports and dashboards. Our focus has been on creating a user-friendly system so that you

can import data, create your own reports or use our standard reports, and customise your dashboard.

Optimize your sustainability by using all your data sources

Use Energinet for standardized energy consumption, forecasting and waste management. By collecting relevant building data, you can see when your power peaks occur so you can reduce them by optimizing energy use.

Energinet gives you:

Create **specific energy** targets for your meters or buildings and receive **alarms on deviations**.

Track trends, **set performance benchmarks**, and adjust energy strategies accordingly.

Easy data import of measurement values from all systems supporting open data transfer.

The flexible setups make it possible to handle various building scenarios.

Get **fast rollout** and easy onboarding of more buildings and meters.

Visualize and analyze everything that can be measured.

Easy data import

Data is imported into Energinet via SFTP, E-mail, industry protocols (i.e., OBIX), third-party APIs, and directly through our API solutions. All systems that support data transfer on one or more of these interfaces can send data to Energinet.

Designed for buildings and industry

Our EMS is an intuitive system designed for buildings and industry. A user-friendly, adaptable, and highly configurable platform that gives you a complete overview of energy data, consumption, and performance.

ISO compliant

Energinet is in compliance with ISO50001 and supports ISO14001 templates, workflow, and procedures that satisfy audit requirements. This is also in compliance with the Energy Saving Opportunities Scheme (ESOS) UK legislation.
