

Recessed Smart Lock Installation

tedee BIOMETRICS

Outside Inside

The door can always be unlocked with a traditional key – in addition to a range of smart, kevless methods.

The system uses shortened Europrofile cylinders to integrate the Tedee PRO within the door leaf.

Sleekly finished, the protruding button enables push-to-lock and unlock functionality.

Why is it better than a traditional electro-motorized lock?

No cables

A completely autonomous solution: no need for cumbersome wiring between the frame and the door leaf during the production process.

Battery powered

No need to drill the wall to run cables or install chargers.

Smart Door System

Beautiful and minimalist

Enhance your premium products with seamlessly integrated smart features.
