

IT Security at Scale and Speed

External Attack Surface Management · EASM Your Advantage at the Critical Moment · Operational from Day One

LocateRisk enables cyber risk prevention through continuous analysis of external IT landscapes and supply chains. It streamlines both External Attack Surface Management (EASM) and Cyber Vendor Risk Management (C-VRM).

- ✓ **Monitor and verify your IT security status at any time**
Intervals: semi-annually, quarterly, monthly, weekly ...
- ✓ **Gain automated oversight of your external IT footprint**
Covering network, application and web security, DDoS resilience, encryption standards, configurations, and regulatory compliance (including GDPR) etc. Scoring-Method: **EPSS to complement CVSS**
- ✓ **Detect anomalies and differences immediately**
Through notifications and comparison functions within reports
- ✓ **Resolve security issues faster**
Through AI-supported prioritization, actionable recommendations and advanced filtering and workflow functions that accelerate remediation processes
- ✓ **Assign and manage responsibilities efficiently**
Through integrated task management, enabling streamlined collaboration across teams
- ✓ **Reduce time-to-action through preemptive intelligence**
Identification of critical vulnerabilities via proprietary detection methods prior to public NVD disclosure
- ✓ **Seamlessly integrate AI models via Model Context Protocol**
The MCP interface enables straightforward integration with proprietary LLMs, simplifying SOC operations and enhancing the responsiveness of security teams
- ✓ Internal analyses easily integrated into dashboards and visual reports via automatic **Internal Scan Connector**

LocateRisk is the only cyber risk analytics platform that combines EASM and C-VRM within a unified solution, enhanced by an MCP interface and identifies critical vulnerabilities independently of US-based data sources.

For enhanced efficiency · SecurePlus

- ✓ **Evaluate cybersecurity compliance with ease**
Continuous mapping of identified vulnerabilities against compliance requirements, including TISAX, NIS2, CIS Controls, GDPR, ISO 27001:2022, ISO/IEC 27002, NIST SP 800-53, PCI DSS, MITRE ATT&CK, NIST Cybersecurity Framework (CSF), OWASP ASVS, OWASP Top 10, SOC 2, BSI IT Baseline Protection 2023, DIN SPEC 27076, CISIS12 and more
- ✓ **Brand monitoring · Detect phishing and fraudulent domains**
Protect against domain spoofing, fraud and reputational damage – 24/7
- ✓ **Understand and address critical issues faster**
AI-driven support for every vulnerability and system enables rapid risk assessment and accelerated remediation

Less Assessment Better Evidence

Cyber Vendor Risk Management · C-VRM Because your decisions deserve the most reliable data

LocateRisk's Cyber Vendor Risk Management enables you to control supply chain risks, validate security standards, and future-proof your business relationships. It significantly reduces assessment effort while providing a robust foundation for regulatory compliance.

- ✓ **Validate supplier information with objective evidence**
By cross-referencing subjective supplier self-assessments with objective, technical scan data
- ✓ **Automated scans & digital questionnaires in one platform**
for GDPR, NIS2, DORA, TISAX, ISO 27001, DIN 27076, NIST, etc.
- ✓ **Evaluate vendor compliance instantly and independently**
Through passive scoring that assesses external risk posture without requiring supplier consent, cooperation, or response times
- ✓ **Structure vendors based on risk and relevance**
Through category-based vendor classification, allowing you to group suppliers by criticality or industry and align assessment processes with their respective risk profiles
- ✓ **Address findings directly with responsible stakeholders**
Through automated workflows that route identified risks to the appropriate internal teams or external partners for resolution
- ✓ **Streamline regulatory compliance**
Through standards-based templates (such as NIS2, ISO 27001,...) and AI-supported analysis that reduces manual assessment effort
- ✓ **Scale vendor risk management efficiently**
Through a unified platform that covers the entire lifecycle, from initial assessment to continuous monitoring, within a single solution
- ✓ **Provide audit-ready evidence of security standards and processes**
Through structured, tamper-proof documentation of technical metrics (hard facts) and organizational inputs (soft facts) in one centralized system

70+% time savings

based on feedback from existing LocateRisk customers

- ✓ **Reduce time-to-action through preemptive intelligence**
Identification of critical vulnerabilities via proprietary detection methods prior to public NVD disclosure
- ✓ **Seamlessly integrate AI models via Model Context Protocol**
The MCP interface enables straightforward integration with proprietary LLMs, simplifying SOC operations and enhancing the responsiveness of security teams
