

Ready for immediate use – thanks to plug and play

GreCon PROTECTOR CUBE: the fire protection control centre in a container

No space for technical infrastructure? The CUBE brings the PROTECTOR control centre exactly where it is needed – position, connect, protect. Designed to be modular and offering maximum flexibility.

Your added value with PROTECTOR CUBE:

- ✓ Turnkey solution
- ✓ Simple installation instead of complex construction projects
- ✓ Modular and expandable by design

Industrial Fire Protection for operations without structural requirements

Across the world, operations and process chains require next-generation Industrial Fire Protection, yet do not always have the structural conditions to install technical systems and extinguishing equipment. The GreCon PROTECTOR CUBE addresses this challenge in a pragmatic and intelligent way: the PROTECTOR control centre is delivered as a plug-and-play container solution. Position, connect – and Industrial Fire Protection is ready for operation.

Inside the container is the central control unit GreCon MISSION CONTROL, including fully prepared infrastructure for system operation. Feed-throughs and connection points for water, piping and power are positioned project-specifically – the layout is designed to match the installation environment. If required, extinguishing water is supplied via external tanks – necessary buffer tanks can be integrated depending on the configuration.

The CUBE is modular in size and can be combined if required. Even in the standard version, insulation and heating allow installation in frost-prone environments.

You provide the foundation as well as water and power connections – the rest is delivered turnkey by the CUBE.

Our experts are happy to advise you!
