

RMC

INDUSTRIAL HEAT PUMPS

Engineered for industrial applications

CHILLVENTA 2026

Hall 5 / Booth 5-326

RMC designs and manufactures industrial heat pumps tailored to specific technical requirements and facility parameters. The solutions are intended for industrial and commercial applications where efficient energy use, equipment reliability, and the ability to adapt the system to production processes are essential.

Custom Engineering

Equipment configuration is defined according to the technical requirements, operating conditions, required heating capacity, and specific characteristics of each facility.

Manufacturing Capabilities

RMC's in-house manufacturing capabilities allow us to adapt the design and configuration of the equipment to the requirements of a specific project or partner.

Energy Efficiency

RMC industrial heat pumps are designed for applications where efficient use of thermal energy and optimization of energy consumption are key priorities.

RMC

Partnership Model

Solutions can be implemented both within direct industrial projects and in cooperation with engineering companies and OEM partners.

APPLICATION AREAS

Food Processing

Industrial Manufacturing

Logistics

Commercial Facilities

Energy-intensive Industrial Applications
