MANAGEMENT CENTER

THOR scans across your endpoints. Controlled from one console.

Run and schedule THOR scans directly on your endpoints through lightweight agents. Centrally manage scan campaigns, custom indicators and results, on-premises and under your control.

UP TO

25,000

endpoints per Management Center instance

MORE THAN

1 million

endpoints across centrally managed, multi-instance deployments

One rollout. The lightweight agent stays installed; THOR runs on demand or on a schedule.

Incident response

Investigate live endpoints via remote consoles, browse and collect files, and execute built-in or custom playbooks for incident response and containment.

IT & OT security

Extend threat detection to restricted, legacy and OT systems where standard endpoint scans aren't possible, using THOR Thunderstorm.

Continuous assessment

Schedule recurring THOR scans across your endpoints. Use Analysis Cockpit baselines to focus on new and changed findings instead of reviewing the same results repeatedly.

nextron systems

We detect hackers.

500+ customers · 30+ countries · scanning tools recommended by security agencies

MANAGEMENT CENTER

From scanning to response.

ALSO AVAILABLE AS A MANAGED SERVICE
Compromise assessments delivered by Nextron Security Experts.

Scan your endpoints

Windows · Linux · macOS · AIX

Lightweight agents: scans and evidence collection.

Flexible deployment
Recommended agent • THOR offline packages
Agentless PowerShell

Apply your intelligence

Custom IOCs & YARA rules
Filenames, keywords, C2 indicators and hashes; signatures from threat feeds and investigations.

Estate-wide coverage
Manage and apply built-in and custom indicators of compromise (IOCs) across endpoints.

Investigate & respond

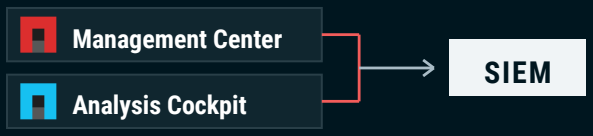

Remote console
Real-time investigation and file collection. Windows PowerShell; Linux/macOS local shells. Complex scripts. All sessions recorded and replayable.

Deeper investigation per endpoint
Run a more intensive THOR scan on a single connected endpoint when a finding needs a closer look, without a new rollout.

Connect your tools

API integrations
SOAR, SIEM, MISP / IOC feeds and security tools.

Automatic THOR result forwarding

Scan findings from both sources in one SIEM feed.

Extend into IT & OT

vmware · android · IBM · hp UX

THOR Thunderstorm
Collect files from ESXi hosts, Citrix appliances and OT systems where no endpoint scan is possible, and scan them on your on-premises Thunderstorm service. One console for IT and OT.

Trusted by over 500 customers worldwide.

Assess continuously

Scheduled scans
Recurring group scans by template: the mechanism behind continuous assessment.

Analysis Cockpit
Baseline the results; review what is new or changed.

Operational dashboard
Scan statistics, errors and system performance.
