

Proven versatility meets sustainability

An oil that is universally applicable, proven for over 120 years, and harmless to people, animals, and nature? Sounds impossible, right?

Not at all. For more than 120 years, Ballistol Universal Oil has stood for a product that is versatile, useful, and at the same time environmentally friendly. In today's world, where sustainability and environmental awareness are increasingly coming into focus, this product's unique becomes especially clear: it combines maximum performance with biodegradability and skin compatibility, and it is food-safe. Qualities like these are more important than ever in an age of growing environmental and health consciousness.

If you're not yet familiar with Ballistol Universal Oil, now is the perfect time to take a closer look. The manufacturer is currently offering a special edition in a handy 75 ml spray can at a very attractive introductory price.

The World of Versatility

Versatility is a decisive factor today. A product that reliably handles multiple tasks saves time and builds trust. Ballistol Universal Oil is exactly that kind of product and the right choice for the care, protection, and preservation of many different materials.

It neutralizes mild acids such as perspiration on stainless steel surfaces, loosens and lubricates seized or squeaky hinges and joints, and preserves garden tools such as hedge trimmers, lawn mowers, and spades. The universal oil also cares for, regenerates, and protects natural wood, giving it a silky matte finish. Brittled leather becomes soft and supple after treatment and is protected against water, mold, drying out, and cracking. Applied in a very thin layer to oil-resistant rubber, it even restores elasticity. Cleaning plastic or stone surfaces is equally effortless with this versatile oil.

Press release

Beyond its exceptional creeping and lubricating properties, it is approved for use in the food industry and is fully biodegradable. The formula, manufactured unchanged in Germany since 1904, guarantees the highest quality and safety, including for direct skin contact. The oil also has disinfectant properties and can provide supportive care for minor cuts and abrasions.

The versatility of this product makes it a practical companion in many areas of everyday life. It offers sustainable protection for anyone who values quality, flexibility, and environmental responsibility without compromise. Sustainable, effective, and proven.
