

# New Green Era in Printing

# Green Factory

14.000 sqm (Built 2017).

In the hearth of İstanbul. 3 km from  
Ambarlı Port. 20 km from city center.

We're on a mission to minimize our  
environmental impact and inspire our  
customers towards sustainability.  
Recyclable production and customer  
engagement lie at the core of our  
operations

# We Are Now Solar Powered

Our factory was built in 2017 as a green factory. Which means the facility is equipped with eco-friendly design and manufacturing processes that efficiently improve greenhouse gas emission, environmental pollution and energy consumption.

As an environmentally friendly company, we have invested in a renewable energy source. "Solar Energy"

We chose to implement solar energy because it's an emission free and clean source of power. This will help us use less gas energy therefore our carbon footprint will be much less.
