## About us

Technological developments and challenges associated with new types of threats and risks require us to re-think the issue of cybersecurity. Government, business, academia and society must work closely together to grasp the global dimension of the issue and develop future-oriented solutions.

It was in this spirit that the Cyber Security Council Germany e.V. was founded in August 2012 by well-known personalities. The Berlin-based association is politically neutral and aims to advise companies, public authorities and political decision-makers in the field of cyber security and to strengthen the fight against cyber crime.

The Association's members include companies of different sizes and from a wide range of industries, organisations and institutions, as well as experts from the fields of cybersecurity, business and society. The Association brings these diverse stakeholders together in a national and international network, fostering professional exchange, dialogue and the development of practical solutions to strengthen cybersecurity.

## Our goals

**Intensification of the cooperation** between politics, public administration, business and science **to improve IT protection**

Promotion of **awareness** for cyber security

Establishment of an international **cyber security network**

Creation of channels for national and international **dialog**

**Mediation** between technical-operational level and management level

## Our measures

Information events and discussion rounds on the topic of cyber security

Industry- or topic-related hubs for the development of solutions

Consulting for political decision makers

Development of a neutral platform and a comprehensive network to identify cooperation partners

Delegation trips for international exchange with decision-makers and company leaders on the topic of cyber security

Organization of training courses on IT protection

Awareness campaigns

Preparation of studies, analyses and articles, Commenting on laws or draft laws
