LIQUID LEVEL SENSORS

ELECTRO-OPTIC SYSTEMS

OPTICAL LEVEL SWITCHES

State of the Art in Liquid Level Sensors

Teklab is a dynamic company that, with more than 30 years of experience in electronics development, can today offer a wide range of Infra-Red liquid level switches in order to meet the growing market demand. From many years Teklab exports Italian made products to different customers in many countries all over the world.

Teklab is an ISO 9001:2008 certified Company

Specialists in Liquid Level Sensors and Electronic Controllers

Teklab has a wide range of liquid level sensors based on digital technology.

All the liquid level sensors are low cost, high technology products and have undergone stringent quality control tests. They are programmable by microcontroller and their body material is compatible with most common chemical agents, food, beverage, oils and fuel.

These electro-optic liquid level sensors are designed to match the specific needs of demanding customers in every field. Typical applications for our sensors include refrigeration and air conditioning systems, medical, food & beverage, pharmaceutical, petrochemicals, heavy duty automobiles, hydraulic reservoirs, machine tools, home appliances, vending machines etc.

Apart from traditional sensors based on pressure, floatation, conductivity etc, Teklab offers a wide range of IR liquid level sensors based on infra red emission technology. These liquid

level sensors have the advantages of small size, reliability, no moving parts, long life, efficacy and economy.

These tiny units are ideal for point level sensing applications where dependability and economy are important. The liquid level sensors are suitable for high, intermediate as well as low level detection. They are easy to install and can be tank top, side or bottom fitted. Being solid state switching they are rugged and highly dependable over the entire life of the sensor, having no moving parts.

The IR liquid level sensors are impervious to the hardness or the conductivity of liquid. Hence they can be used anywhere in the world under any environment as it is without requiring any special fine tuning. The output switching can be delayed programmatically in these liquid level sensors depending on application.

You are in safe hands with Teklab!

LIQUID LEVEL SENSORS

OIL LEVEL REGULATORS

TEKLAB
LIQUID LEVEL SENSORS

Innovative Communication Technology

NANO INTERFACE

Main Features

TK4 combines the established reliability and ease of installation of TK3 and TK3+ with **revolutionary connectivity capabilities** which opens new and interesting usage scenarios for the product.

TK4 in fact integrates a **wireless near field communication protocol** that allows users to interact with the oil level regulator to expand product's features.

The communication technology adopted is:

- **Extremely easy-to-use:** data accessible without disassembling enclosures and connecting cables.
- **Powered / not powered operating:** several information accessible also when the electronics is not powered (useful for quick and easy in-house customization).

- **Highly compact and cost effective:** the product keeps its very compact design and there is no need for expensive devices.
- **Highly safe:** password protected point to point single link with limited range of operation to avoid unwanted changes from unauthorized personnel.
- **Really Flexible:** possibility of modifying functioning parameters and verify working conditions (also in real time) to optimize system's operation.
- **Open for the future:** Teklab is continuously in contact with customers for adding features to the product.

Typical applications are:

- verification of product operation status and system operating conditions during normal maintenance operations.
- functioning timings customization.
- alarm timings customization.

Note. Customizations possible both “off line” (factory setting before shipping and installation) and “on line” (on the field system adjustment / optimization).

TK4MB

Enhanced Oil Level Regulator with integrated Modbus RTU Connectivity

Main Features

TK4-MB combines the established reliability and ease of installation of TK3+ **with revolutionary flexibility** of standard TK4 extending its connectivity capabilities through the introduction of wired serial interface based on Modbus RTU protocol.

TK4-MB in fact integrates two possibilities of communication interface:

- A wired serial interface based on Modbus RTU protocol.
- A wireless near field communication protocol that allows users to interact easily and directly with the oil level regulator using a Windows based PC or an Android device (Mobile Phone or Tablet).

The **TK4-MB** is designed to be connected to widely diffused **Modbus RTU networks** as a slave node opening the possibility of having the availability of info about working conditions of the product and thus of the system. Consequently it is possible to have remote monitoring of the compressor pack even further reliable and effective letting it possible to optimize systems performances, to prevent and manage alarms and to elaborate accurate maintenance plans.

Here is an example of typical connection:

Reading and Writing Register Commands are processed according to standard Modbus RTU protocol (www.modbus.org) to allow easy integration and maximum flexibility.

Example of parameters accessible on the serial bus are: Valve and Alarm contact status, Functioning Timings, Time to Alarm, Logging info, etc.

The wireless proximity communication with the TK4 is established simply connecting the supplied USB dongle to the PC or to the Android device (Tablet or Smartphone) and launching the dedicated App.

This solution is:

- Extremely easy-to-use: data accessible without disassembling enclosures and connecting cables.
- Powered / not powered operating: several information accessible also when the electronics is not powered (useful for quick and easy in-house customization).
- Highly compact and cost effective: the product keeps its very compact design and there is no need for expensive devices.
- Highly safe: password protected point to point single link with limited range of operation to avoid unwanted changes from unauthorized personnel.
- Really Flexible: possibility of modifying functioning parameters and verify working conditions (also in real time) to optimize system's operation.
- Open for the future: Teklab is continuously in contact with customers for adding features to the product.

It can be used for direct customization of working parameters and working serial settings of the Modbus protocol (like Device Address, baud rate, etc) letting it very easy to integrate the product on any system.

Typical applications are:

- verification of product operation status and system operating conditions from remote control rooms (using Modbus interface).
- verification of product operation status and system operating conditions during normal maintenance operations directly on the unit without the needing of any connection (using wireless interface).
- functioning timings customization for system's optimization.
- alarm timings customization for better system's monitoring.

TK4MB @46 bar

Oil Level Regulator with integrated Modbus RTU connectivity

SUITABLE FOR CO₂ SYSTEMS

Some advantages of this solution:

- Modbus RTU Serial connection to system controller
- Extremely compact dimensions
- Left/Right mounting possibility with the same TK4-MB
- Reduction of the number of junctions in the circuit with less possibility of having leakages
- Usage of less components (simplified circuit and easier warehouse management)
- Simplified Installation (cost savings in terms of installation time)
- Revolutionary connectivity capabilities.

Main Features

- **High reliability** ensured by absence of mechanical moving parts.
- **Sight glass and electronic LEDs** can be checked **on the same side** where is **more comfortable** to do **inspections**.
- Well consolidated steel with fused glass technology with absence of seals ensures **no leakage** and **good chemical compatibility**.
- **Direct sight glass replacement (3/4/6 holes flange connection)**.
- 24 VAC / 230 VAC power supply options.
- **Easy maintenance of the coil** of the valve **and of the Electro-Optic sensor** that can be easily replaced **without emptying or depressurizing the plant**.
- 230 VAC /2A alarm relay output suitable for **direct connection in the security chain** of the system.
- **Adapters suitable for various types of compressors.**
- **Unit conform to directives 2014/30/UE and 2014/35/UE.**

Application Description

The TK4-MB is designed to control the oil level in the compressor crankcase in order to avoid the compressor to run without oil and so improve its lifetime. TK4-MB monitors the oil level with the embedded electro-optic sensor and comprises a solenoid valve for oil filling and a relay output contact to give an alarm.

SUPPLY VOLTAGE	24 VAC $\pm$ 10% or 230 VAC $\pm$ 10% depending on model
SUPPLY CURRENT	Each TK4MB requires 20VA (depending on the solenoid valve)
ELECTRICAL CONNECTION	EN175301-803 Connector / Spare wires
OUTPUT SIGNAL	Contact free relay output NO and NC
RELAY OUTPUTS	Up to 230VAC @2A
HOUSING MATERIAL	Nickel plated steel + fused glass PA glass fibre reinforced
ENCLOSURE PROTECTION CLASS	IP 65
MEDIA TEMPERATURE	-40°C÷+85°C
AMBIENT TEMPERATURE	-40°C÷+60°C
MAX WORKING PRESSURE	46 bar (higher pressure limits available on different TK4-MB models)
MOPD	26 bar (higher pressure limits available on different TK4-MB models)
OIL RETURN LINE	7/16 – 20 UNF male
CABLE TYPE	PVC cable CEI 20-22. Working temp.: -20 ÷ +70 °C (fixed laying)

Modbus RTU typical application

Ordering Codes

ELECTRICAL CONNECTION POWER SUPPLY	CABLE GLANDS 3 m
24 V	TK4MB-A50AB13-01
230 V	TK4MB-A50BB13-01

Program interfaces available. Suggested ordering codes not include oil strainer element. Adapters must be ordered separately.

TK4 @46 bar

Oil Level Regulator

with integrated connectivity capabilities

CONNECTORS VERSION

TWO MOUNTING POSSIBILITIES WITH THE SAME PRODUCT (LEFT/RIGHT)

CABLE GLANDS VERSION

TWO MOUNTING POSSIBILITIES WITH THE SAME PRODUCT (LEFT/RIGHT)

Some advantages of this solution:

- Extremely compact dimensions
- Left/Right mounting possibility with the same TK4
- Reduction of the number of junctions in the circuit with less possibility of having leakages
- Usage of less components (simplified circuit and easier warehouse management)
- Simplified Installation (cost savings in terms of installation time)
- Revolutionary connectivity capabilities.

Main Features

- **High reliability** ensured by absence of mechanical moving parts.
- **Sight glass and electronic LEDs** can be checked **on the same side** where is **more comfortable** to do **inspections**.
- Well consolidated steel with fused glass technology with absence of seals ensures **no leakage** and **good chemical compatibility**.
- **Direct sight glass replacement (3/4/6 holes flange connection)**.
- 24 VAC / 230 VAC power supply options.
- **Easy maintenance of the coil** of the valve **and of the Electro-Optic sensor** that can be easily replaced **without emptying or depressurizing the plant**.
- 230 VAC / 2A alarm relay output suitable for **direct connection in the security chain** of the system.
- **Adapters suitable for various types of compressors.**
- **Unit conform to directives 2014/30/UE and 2014/35/UE.**

Application Description

The TK4 is designed to control the oil level in the compressor crankcase in order to avoid the compressor to run without oil and so improve its lifetime. TK4 monitors the oil level with the embedded electro-optic sensor and comprises a solenoid valve for oil filling and a relay output contact to give an alarm.

- Extremely compact dimensions
- Left/Right mounting possibility with the same TK3+
- Reduction of the number of junctions in the circuit with less possibility of having leakages
- Usage of less components (simplified circuit and easier warehouse management)
- Simplified Installation (cost savings in terms of installation time).

Main Features

- **High reliability** ensured by absence of mechanical moving parts.
- **Sight glass and electronic LEDs** can be checked **on the same side** where is **more comfortable** to do **inspections**.
- Well consolidated steel with fused glass technology with absence of seals ensures **no leakage** and **good chemical compatibility**.
- **Direct sight glass replacement** (3/4/6 holes flange connection).
- 24 VAC / 230 VAC power supply options.
- **Easy maintenance of the coil** of the valve **and of the Electro-Optic sensor** that can be easily replaced **without emptying or depressurizing the plant**.
- 230 VAC /2A alarm relay output suitable for **direct connection in the security chain** of the system.
- **Adapters suitable for various types of compressors.**
- **Unit conform to directives 2014/30/UE and 2014/35/UE.**

Application Description

The TK3+ is designed to control the oil level in the compressor crankcase in order to avoid the compressor to run without oil and so improve its lifetime. TK3+ monitors the oil level with the embedded electro-optic sensor and comprises a solenoid valve for oil filling and a relay output contact to give an alarm.

SUPPLY VOLTAGE	24 VAC $\pm$ 10% or 230 VAC $\pm$ 10% depending on model
SUPPLY CURRENT	Each TK3+ requires 30VA (depending on the solenoid valve)
ELECTRICAL CONNECTION	9.4mm Industry Standard Connectors / EN175301-803 Connector or spare wires
OUTPUT SIGNAL	Contact free relay output NO and NC
RELAY OUTPUTS	Up to 230VAC @2A
HOUSING MATERIAL	Nickel plated steel + fused glass PA glass fibre reinforced
ENCLOSURE PROTECTION CLASS	IP 65
MEDIA TEMPERATURE	-40°C÷+85°C
AMBIENT TEMPERATURE	-40°C÷+60°C
MAX WORKING PRESSURE	130 bar (higher pressure limits available on different TK3+ models)
MOPD	100 bar (higher pressure limits available on different TK3+ models)
OIL RETURN LINE	7/16 – 20 UNF male
CABLE TYPE	PVC cable CEI 20-22. Working temp.: -20 ÷ +70 °C (fixed laying)

Mechanical Dimensions (connectors version)

L = 134.5

L1 = 37

Note. - Quotes in mm -. L and L1 can vary depending on the adapter (see Adapters Addendum)

LIQUID LEVEL SENSORS

Level Control Unit TK1⁺

SUITABLE FOR CO₂ SYSTEMS

Main Features

- The absence of mechanical moving parts ensures **High reliability**
- **24VAC / 230VAC power supply options**
- **Easy installation (sight-glass replacement)**
- Well consolidated steel with fused glass technology ensures **no leakage** and good chemical compatibility
- Electronic sensor **can be easily replaced** without emptying and/or depressurizing the plant due to the two parts design
- **Direct mounting possibility** / adapters suitable for various types of compressors
- **Customizable delays** on request
- **Unit conform to directives 2014/30/UE and 2014/35/UE.**

Application Description

TK1⁺ series is especially designed for use in level monitoring for HVAC&R market.

TK1⁺ can be mounted directly on the crankcase of the compressor, on the oil reservoir, oil separator or liquid receiver.

This product is very reliable and suitable for working in heavy environments.

LEDs integrated in the electronic module allow to verify the liquid status.

The two parts design allows the fast replacement of the electronic parts without depressurizing the system.

The electronic module of the TK1⁺ contains an infrared-ray emitter and an optical receiver. In air (liquid not present), all the light emitted is reflected – internally – by the dome and then redirected to the receiver. When the liquid reaches the sensor dome, a big amount of the light emitted is lost in the liquid and the sensor senses its presence.

SUPPLY VOLTAGE	24 VAC $\pm$ 10% or 230VAC $\pm$ 10% depending on model
SUPPLY CURRENT	Each TK1 Electronic module requires 10VA.
ELECTRICAL CONNECTION	Cable wiring or connectors with molded cables depending on model
OUTPUT SIGNAL	Contact free relay output NO and NC
RELAY OUTPUTS	Up to 230VAC @2A
HOUSING MATERIAL	Nickel plated steel + fused glass PA glass fibre reinforced
ENCLOSURE PROTECTION CLASS	IP 65
MEDIA TEMPERATURE	-40°C÷+85°C
AMBIENT TEMPERATURE	-40°C÷+60°C
MAX WORKING PRESSURE	46 bar or 100 bar depending on model
OIL RETURN LINE	1/4" NPT female connection
CABLE TYPE	PVC cable CEI 20-22. Working temp.: -20 ÷ +70 °C (fixed laying)

Mechanical Dimensions

Note. - Quotes in mm -. L and L1 can vary depending on the adapter (see Adapters Addendum)

TEKLAB
LIQUID LEVEL SENSORS

K25 Level Switch for High Pressure environments with 4÷20 mA analog temperature output up to 150 bar

SUITABLE FOR CO₂ SYSTEMS

Application Description

The optical level switch has been designed for use in level monitoring applications for the control of oil or liquid CO₂ for transcritical or subcritical applications.

The switch has no moving parts, thus it is particularly suited for monitoring critical media where high reliability is needed.

The sensor provides two outputs:

- the first one – digital – indicates if the liquid is present or absent,
- the second one – analogical – is proportional to the temperature read.

It combines the Level Detection and the Temperature Management with the high pressure resistance up to 150 Bar.

Operating Principle

The sensor contains an infrared-ray emitter and an optical receiver. In air (liquid not present), all the light emitted is reflected – internally – by the dome and then redirected to the receiver. When the liquid reaches the sensor dome, a big amount of the light emitted is lost in the liquid and the sensor senses its presence.

OPERATION MODE	Detect liquid presence with contact
REPEATABILITY	± 2 mm.
BODY MATERIALS	Nickel plated steel
SENSIBLE DOME	Glass
ELECTRONIC PROTECTIONS	Transient over voltage, reverse polarity
MAX. TEMPERATURE RANGE	From -40°C up to +125°C
STORAGE TEMPERATURE	From -40°C up to +125°C
SUPPLY VOLTAGE	24 VDC ± 10%
SUPPLY CURRENT (LEVEL SECTION)	20mA max.
OUTPUT TYPE	NPN
DC OUTPUT LOAD CURRENT	up to 50 mA max
OUTPUT MODE	Output Normally Open or Closed in air
TEMPERATURE OUTPUT	Analogical from 4 to 20 mA

3/4" NPT - Normally Closed in air	32517308305002003150

EX Electro-Optic Level Switch

CE 0948 II 1 G Ex ia IIC T6...T4 Ga

Safety notes

The sensor has been designed and manufactured to achieve the **ia** intrinsically safety, and to work in potential explosive environment – **IIC Group**. Regarding the temperature class of the instrument, please look at the table on next page of this document for more details.

Operating Principle

The sensor contains an infrared-ray emitter and an optical receiver. In air (liquid not present), all the light emitted is reflected – internally – by the dome and then redirected to the receiver. When the liquid reaches the sensor dome, a big amount of the light emitted is lost in the liquid and the sensor senses its presence.

Case features

Body materials:

Dome materials:

Available Body threads:

Stainless Steel AISI 303, 304, 316L

Glass

from 3/8" up to 3/4" GAS cylindrical;

from 3/8" up to 3/4" GAS conic;

from 3/8" up to 3/4" NPT;

from 5/8"-24 up to 1" 1/8-18 UNEF;

from M18 up to M30 ISO metric.

POWER SUPPLY	9 ÷ 28 Vdc
STORAGE TEMPERATURE	-20°C ÷ 60°C
OUTPUT TYPE	Open collector
MAX. OUTPUT NPN O.C. SINK CURRENT	40 mA
CABLE CAPACITANCE	140 pF/m
CABLE INDUCTANCE	1,25 µH/m
CABLE RESISTANCE	39 mΩ/m

Safety Parameters

Ui = 30VDC

Ii = 160mA

Pi = 1,2W

Ingress Protection Code:

In front IP68, 20 bar 30min

TEMPERATURE CLASS MAX SURFACE TEMPERATURE (TX)	MAX WORKING TEMPERATURE RANGE AT LIQUID DETECTING POINT (°C)	AMBIENT TEMPERATURE RANGE (°C)
T6	-20 ÷ +60	-20 ÷ +60
T5	-20 ÷ +80	-20 ÷ +60
T4	-20 ÷ +100	-20 ÷ +60

Ordering Codes (T6 code examples with Stainless steel AISI 304 housing)

MOUNTING THREAD	TEMP. CLASS	OUTPUT MODE	CODE NUMBER
3/4" NPT	T6	Normally Open in air	51244001001400
1/2" NPT	T6	Normally Open in air	51249001001400
1" 1/8 -18 UNEF	T6	Normally Open in air	5124B001001400
3/4" NPT	T6	Normally Closed in air	51254001001400
1/2" NPT	T6	Normally Closed in air	51259001001400
1" 1/8 -18 UNEF	T6	Normally Closed in air	5125B001001400

NOTE. An appropriate intrinsically safe interface must be used and installed in strict accordance with sensor's technical documentation.

K11 Level Switch

Application Description

K11 level switches are suitable for high pressure applications like pressurized vessels, HVAC and refrigeration, motors etc. They have bodies made of stainless steel and sensor dome made of glass.

They are economical, dependable, and compact in size with overall dimensions of 59 x 27 mm and have no moving parts.

These level switches use infrared technology for their operation.

They have an operating temperature range of -40°C to 125°C .

There is a programmable timer inside these K11 level switches that allows a delay time to be set for delaying the output switching.

The output modes are closed in presence of liquids and open in air or vice versa.

The AC / DC output current is up to 100mA depending on model.

These level switches can integrate electronic protections against transient over voltage, and reverse polarity (for DC models).

They can withstand maximum pressure of 60 bar.

Operating Principle

The sensor contains an infrared-ray emitter and an optical receiver. In air (liquid not present), all the light emitted is reflected – internally – by the dome and then redirected to the receiver. When the liquid reaches the sensor dome, a big amount of the light emitted is lost in the liquid and the sensor senses its presence.

OPERATION MODE	Detect liquid presence with contact
REPEATABILITY	± 2 mm.
BODY MATERIALS	Stainless steel or Nickel plated steel
SENSIBLE DOME	Glass
ELECTRONIC PROTECTIONS	Transient over voltage, reverse polarity (for DC models)
MAX. TEMPERATURE RANGE	From -40°C up to +125°C
STORAGE TEMPERATURE	From -40°C up to +125°C
SUPPLY VOLTAGE	10 – 28 VDC or 24 VAC ± 10% 50 or 60 Hz
OUTPUT TYPE	AC output or NPN, NPN open collector, PNP for DC model
AC/DC OUTPUT CURRENT	Up to 100 mA Max (depending on temperature range)
OUTPUT MODE	Output Normally Open or Closed in the air
DELAY TIMES	Customizable depending on application needs
MAX PRESSURE	Up to 60 bar (burst 120 bar)
TORQUE TIGHTEN	15 Ntm
