

Cynet All-in-One

Complete protection in one intuitive, powerful platform.

Cynet All-in-One removes the high cost and complexity of effective cybersecurity.

Our unified platform delivers native detection, prevention, correlation, investigation, and response—across endpoints, mobile devices, users, networks, SaaS, and cloud applications. Get full visibility, powerful detection, and proven protection— **right out of the box.**

Cynet All-in-One natively provides protection for:

Endpoints

Safeguards workstations, servers, and mobile devices against malware, ransomware, and advanced threats with Endpoint Protection, Device Control, Mobile Security, and Posture Management—detecting and resolving risks before they become issues.

Email

Monitors email for malicious attachments and links and can block risky senders and domains to minimize the risk of this attack entry point with Email Security.

SaaS/Cloud Apps

Automatically identifies, prioritizes, and fixes security risks across all your SaaS and Cloud applications with SaaS & Cloud Security Posture Management technologies.

Third-Party Systems

Detects threats across third party systems such as Active Directory, Firewalls and SaaS/Cloud apps with Extended Detection and Response technology.

Users

Continuously monitors user behavior to detect and block malicious insiders and compromised accounts, with User Behavior Analytics, Deception and Domain Filtering technologies.

Networks

Detects and prevents stealthy attackers from accessing and moving across networks, in addition to blocking connections to malicious sites with Network Analytics and Port Scanning.

End-to-End Automation

Accelerates response with fully automated investigation and remediation, driven by built-in incident workflows and advanced Security Automation, Orchestration, and Response.

Cynet also provides:

Centralized Log Management

Collect high priority log data to quickly and accurately uncover threats lurking across your environment with Centralized Log Management technology.

Access to 24x7 Security Experts

Provides continuous protection with a team of cybersecurity experts who monitor environments and rapidly respond to threats through Managed Detection and Response.

“

“The value that we’ve seen has been the breadth of products that Cynet supports. To be able to bring our customers to a next generation platform, and in most cases lowering their total cost of support and ownership, it’s really the best of both worlds.”

Dean Leclerc, CTO, Whalley Computer Associates

About Cynet

Cynet natively provides the essential security technologies needed to protect organizations in one automated, simplified platform delivering enterprise-grade protections with less manual effort and lower cost. And it’s backed by a team of security experts 24/7.
