GOLDEN grey Master

The „**GOLDEN grey Master**“ cat litter is made from **high quality Bentonite**.

Due to its **fine texture**, the litter is **pleasantly soft on sensitive cat's paws** and therefore extremely popular.

GOLDEN grey Master

High absorbance and pleasant fragrance

The clay we use for our brand is a **pure organic product.**

For this reason cats accept the litter immediately. An added powerful **absorber (approx. 350 % absorbency)** acts to eliminate moisture and cat odours, resulting in the litter having no unpleasant smell. At the same time a light, pleasing **baby powder fragrance** is released.

GOLDEN grey *Master*

Dust free and clean

The **dust free** cat litter consists of **super clumping granules** that do **not** **clot on the cats paws** as long as they are dry.

The granules therefore remain mostly where they belong – in the cat litter box.

Immediate and solid clumping

Due to **immediate** and **solid clumping** the moist cat litter clearly dissociates itself from the dry one. The **lumps are stable** and **can easily be separated** from the clean litter. The unwanted disposal of un-used litter is hereby limited to a minimum.

Furthermore the **daily removal** of clumped granules becomes a **minor concern** as it takes the minimum of time. All you have to do is just simply refill the extracted amount with fresh litter.

GOLDEN grey *Master*

The advantages at a glance:

- Natural product
- Forms lumps
- With a light baby powder fragrance
- Economical to use
- Up to 350 % absorbency
- Low dusting
- With hygiene minerals
