

**NEKTON-S** contains all essential vitamins and is additionally enriched with amino acids, minerals and trace elements. An undersupply of vitamins (hypovitaminosis) is hardly noticeable in the bird, but if it lasts for a long time it leads to considerable damage to health and even to the premature loss of the animal. About 90 % of all diseases in birds are caused by inadequate feeding.

**NEKTON-S** supports the metabolic processes in the bird organism and significantly increases the usability of all absorbed nutrients. **NEKTON-S** has been used extremely successfully worldwide in zoos, animal parks, by breeders and by private animal owners for over 35 years. **NEKTON-S** is administered daily through the drinking water and is very popular with birds.

Ideal in alternation with **NEKTON-MSA** (mineral preparation) and in combination with **NEKTON-E** (for breeding).

Vitamins are essential nutrients. They cause the necessary breakdown and build-up of the nutrients (protein, carbohydrates, fats) in the bird organism and thus ensure the orderly and perfect overall metabolism.

With the supplementary feed **NEKTON-S**, the bird owner has a preparation at their disposal which, with its high content of vitamins, amino acids and minerals, is tailored to the special needs of the birds and prevents damage to the health of the animals that can result from the lack of these active ingredients. Thanks to the high-quality ingredients, the uptake and utilization of the nutrients ingested with the feed are not only supplemented, but also improved and thus upgraded. This strengthens the defenses of the bird and improves performance. In times when the bird is stressed, for example through implementation, newcomers, breeding, moulting, etc., the dose of **NEKTON-S** can be adapted to the changed situation and temporarily increased, or even doubled, without any problems.

To improve fertility, we recommend the avian breeder to combine **NEKTON-S** with **NEKTON-E** (starting approx. 3 weeks before breeding). To prevent mineral deficiencies and to improve the bird's bony structures, we recommend combining **NEKTON-S** with **NEKTON-MSA**.

To prevent mineral deficiencies and to improve the bird's bony structures, we recommend giving **NEKTON-S** alternately with **NEKTON-MSA**.

**Available sizes:** 35 g, 75 g, 150 g, 330 g, 700 g

#### Contains 18 amino acids

**Composition:** Dextrose, calcium carbonate

#### Nutritional additives per kg:

6,600,000 IU vitamin A, 10,000 IU vitamin D3, 6,665 mg vitamin E (all-rac-alpha-tocopherylacetate), 670 mg vitamin B1 (thiamine mononitrate), 1,680 mg vitamin B2 (riboflavin), 3,300 mg calcium-D-pantothenate, 10,000 mg niacinamide, 670 mg vitamin B6 (pyridoxine hydrochloride), 225 mg folic acid, 2,000 µg vitamin B12 (cyanocobalamin), 16,670 mg vitamin C (L-ascorbic acid), 1,330 mg vitamin K3 (menadione-sodium-bisulfite), 30,000 µg biotin, 2,500 mg iron (ferrous(II)-sulfate, monohydrate), 1,220 mg zinc (zinc sulfate, monohydrate), 1,250 mg manganese (manganese(II)-sulfate, monohydrate), 200 mg copper (cupric(II)-sulfate, pentahydrate), 100 mg iodine (calcium iodate, free of water)

#### Technological additive:

Sepiolite 5,000 mg/kg, silicic acid

#### Feeding recommendation:

A measuring spoon is included inside each bottle of **NEKTON-S**.

One measuring spoon **NEKTON-S** to one cup water or 4 oz soft food.
