

Mohrbach Verpackungsmaschinen GmbH at Fachpack 2024: Innovation and the future in Hall 1, Stand 1-226

Höhrfröschchen, 17.09.2024 - Mohrbach Verpackungsmaschinen GmbH is presenting its latest generation of machines **at Fachpack 2024** in **Hall 1, Stand 1-226**. The design of the new machine series combines innovation and functionality and reflects Mohrbach's commitment to the highest quality through clear lines and well thought-out construction.

The intelligent frame concept of the new machine improves operability, facilitates retooling and maintenance and increases both efficiency and user satisfaction. A special feature is the centralised operating concept with the **SIEMENS HMI "WinCC Unified"**, which enables centralised programming, configuration and operation of all machine components.

The new generation of machines from Mohrbach utilises advanced technologies and offers a comprehensive overview of modern packaging solutions. The tray packer is equipped with a powerful **ABB Delta robot** as a toploader, which ensures fast and precise loading, as well as with the innovative and future-orientated **XPlanar Mover system** from Beckhoff. The latter enables free 2D product movements with up to six degrees of freedom and allows the floating movement of loads. The advantages of the XPlanar system include flexibility, space savings, speed, precision, hygiene, freedom from wear and modularity.

In addition, various printer and scanner systems will be presented to round off the comprehensive functionality of the new machine series.

With this new development, Mohrbach emphasises its role as an innovative solution provider and offers its customers forward-looking concepts that meet the requirements of the modern packaging industry.

Visit Mohrbach at Fachpack 2024 to experience the latest developments in packaging technology up close.
