

PRESS RELEASE

Compact connections for small spaces

Lüdenscheid, Germany, October 2025

Schulte Elektrotechnik's EVoline Spin is a fitted power solution for small work surfaces – in kitchens or on hotel furniture. The rotatable system combines discreet design with superior functionality.

The EVoline Spin's innovative rotatable design transforms furniture into functional work surfaces in no time. The solution supplies power exactly where required, but needs concealing for aesthetic or space-saving reasons. Turning it 180° reveals the hidden connections. Its ease of use also makes it perfect for people with special needs.

Depending on requirements, the Spin has an internationally configurable socket, a Euro socket or a powerful USB-C 20-watt charging port. This port is ideal for charging smartphones, tablets and other mobile devices quickly.

The Spin can be either flush- or surface-mounted. When closed, it also blends in discreetly with contemporary kitchen furniture, home offices or hospitality spaces where versatility is vital.

The Spin's clever design allows mounting from above, making fitting easy and fast. Just screw it on, connect it and you're done.

The EVoline Spin comes in black and will be showcased at the [Alles für den Gast trade fair](#) in Salzburg, Austria, on the EVoline stand in hall 10 from 8 to 11 November 2025.

For more details and technical information on the EVoline Spin go to:

About Schulte Elektrotechnik

EVoline®

Schulte Elektrotechnik developed EVoline. In 1964, Siegfried Schulte started an engineering business in Lüdenscheid, Germany – and is still working on his vision of making electrical products safer and more intelligent. As a provider of modular system solutions for power and data connections, EVoline develops products for the entire range of power solutions in office environments or homes.

Today, Schulte Elektrotechnik has more than 30 sales partners worldwide. All EVoline products are manufactured, with a high degree of vertical integration, by around 200 employees at Schulte Elektrotechnik in Lüdenscheid, Germany. The high proportion of manual finishing guarantees the exceptional quality of the products made. EVoline has won several design awards. Schulte Elektrotechnik has already spent more than six decades producing solutions in Germany in an energy-efficient, green manner.
