

TacFlex® surface protection films for window profiles

Individual film solutions for window profiles – As much protection as possible, as little adhesion as necessary – TacFlex® surface protection films meet these standard requirements for diverse surfaces to perfection.

Structured / painted surfaces

- Transparent protective films offer optimum product presentation
- Resistance to weathering for up to 12 months

Extensively structured / painted surfaces

- Optimum solution specifically for extensively structured surfaces
- Coordination with decorative surfaces: through in-house film extrusion, special adhesives (both rubber- and acrylate-based) as well as an individually adjustable application quantity and adhesion

Premium protective films

- Laminated protective film consisting of two layers of film with intermediate layer printing – the premium product for your profiles
- Special thick films for particular protection with a thickness of up to 200 µm

Universal protective films for the entire window

- Protective films are suitable both for the glass and for PVC profiles
- Ideal solution for complete windows
- UV stability for up to 12 months feasible with transparent substrate films

Individual solutions for special requirements

For us, individual protection for your surfaces means producing individual products. Our self-adhesive and self-adhering films leave no desire unfulfilled in terms of protection characteristics, adhesion levels, thermal forming capability, film thickness, or release behavior. This is why Bischof+Klein regularly manufactures over 1,000 articles for the market; these can be individually selected from our portfolio and adapted.

Excerpts from the product portfolio

TacFlex® DQ1009	Transparent to opaque colors for smooth plastic profiles
TacFlex® KX1006	Opaque colors for smooth and structured surfaces
TacFlex® KX1011-1	Opaque colors for highly structured surfaces
TacFlex® KX1045	Opaque colors for extensively structured surfaces
TacFlex® DH1006	Transparent to opaque for complete plastic windows and aluminum profiles including glass

Material properties with film know-how from Bischof+Klein

- ✓ Depending with exposure to the elements outdoors for up to 12 months
- ✓ Can be printed with up to 3 colors
- ✓ Various adhesive systems (solvent-based or solvent-free acrylate, rubber), in-house acrylate production
- ✓ TacFlex® surface protection films are always abrasion-resistant and can be removed without residues

Know-how and long-term cooperations with well-known profile and decorative film manufacturers lead to optimum film solutions. Our films make an active contribution to increased sustainability in your product cycle.
