

# LAMEC

DIE CASTING - MACHINING - FINISHING

## Who we are

Lamec currently serves Italian and international customers in sectors such as lighting, ventilation, electrical, healthcare, telecommunications, textiles, gardening, and home appliances.

## The group

Dynamic staff with over **100** employees spread across 3 production sites

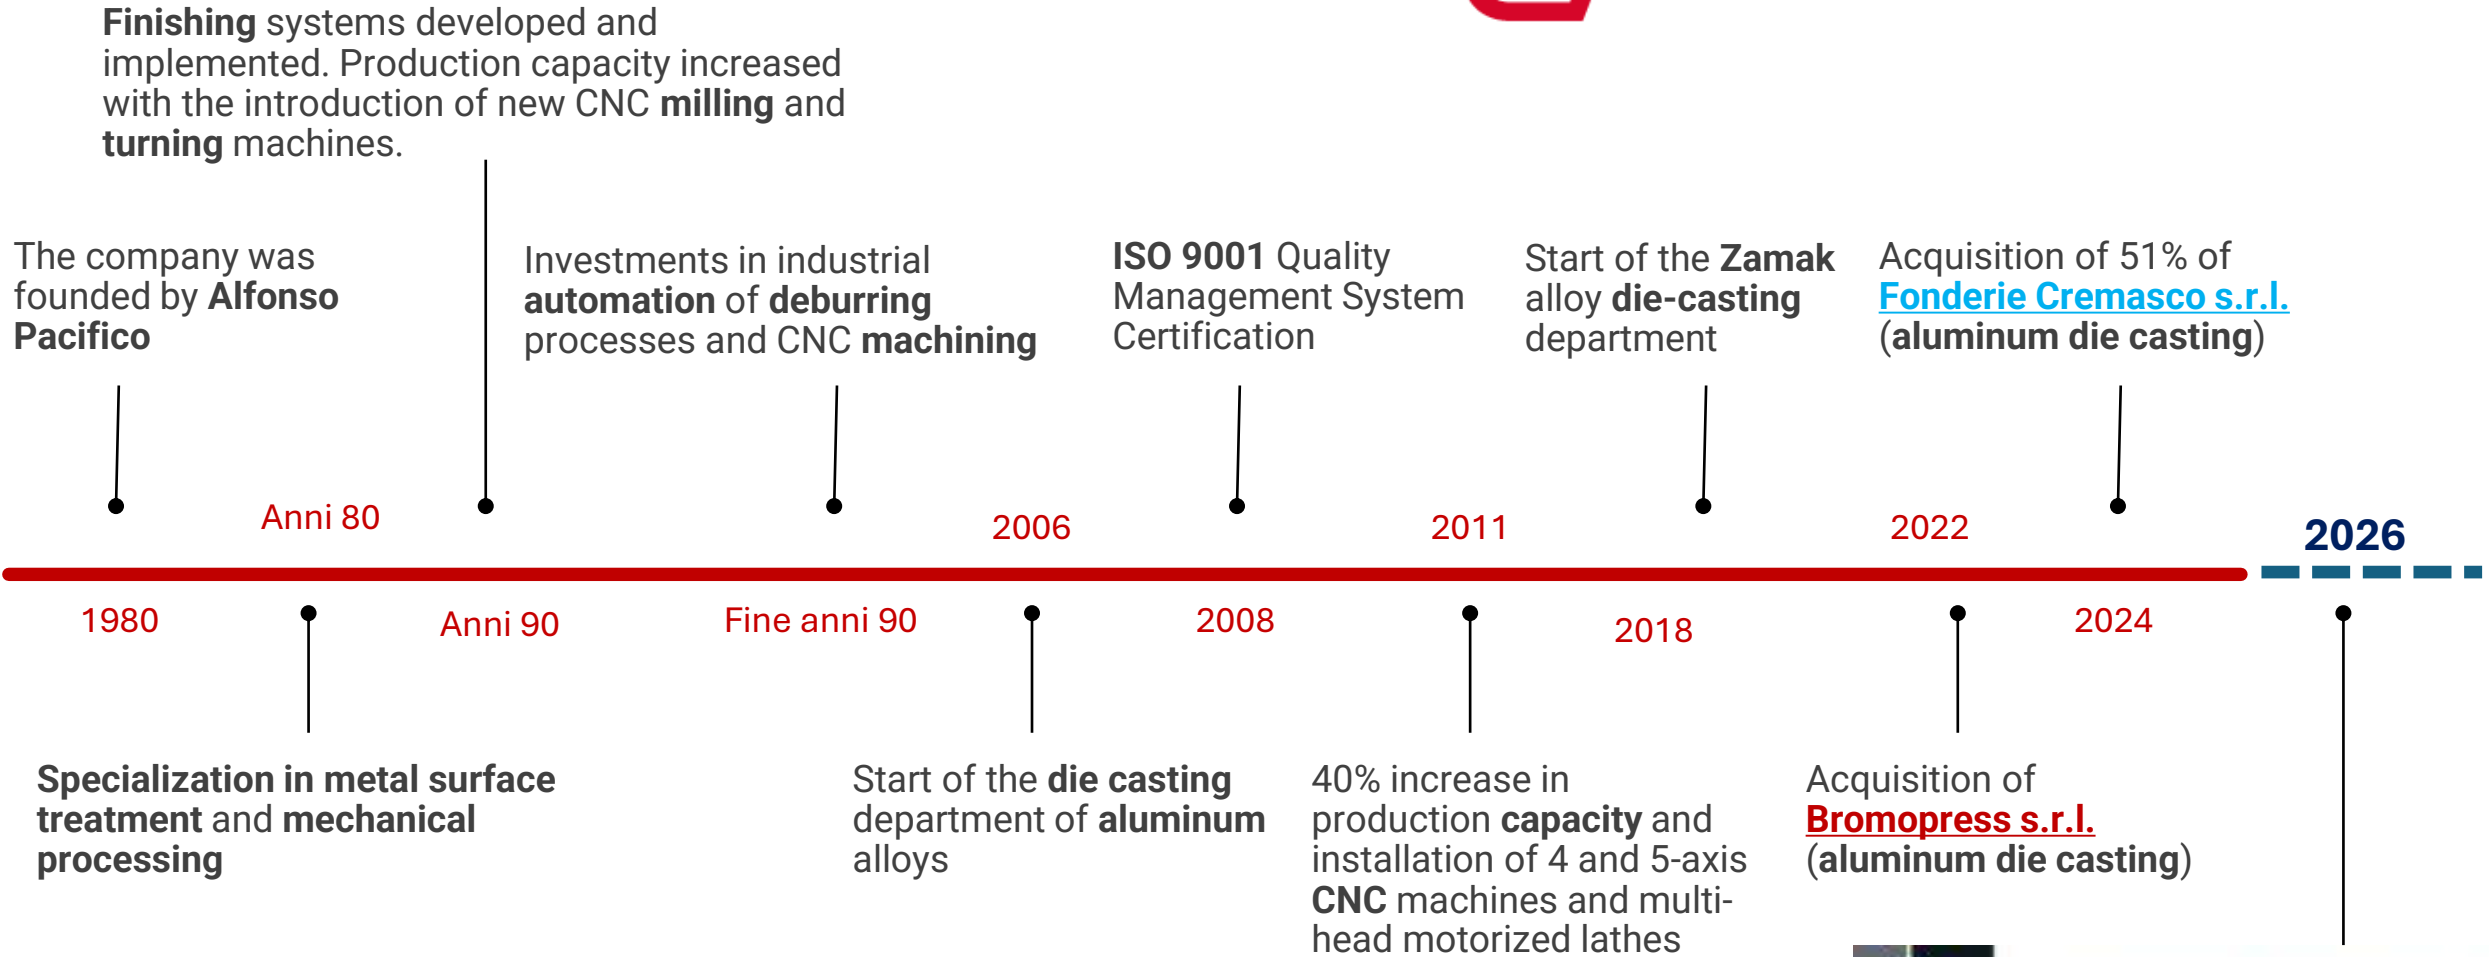

## The know-how

From **die casting** to the finished product through **machining** and surface **finishing** technologies

## Quality and flexibility

Complex operations in short times guaranteeing **quality** and **productivity** thanks to the **verticalization** of internal processes

# Our history

## Automation and advanced technology

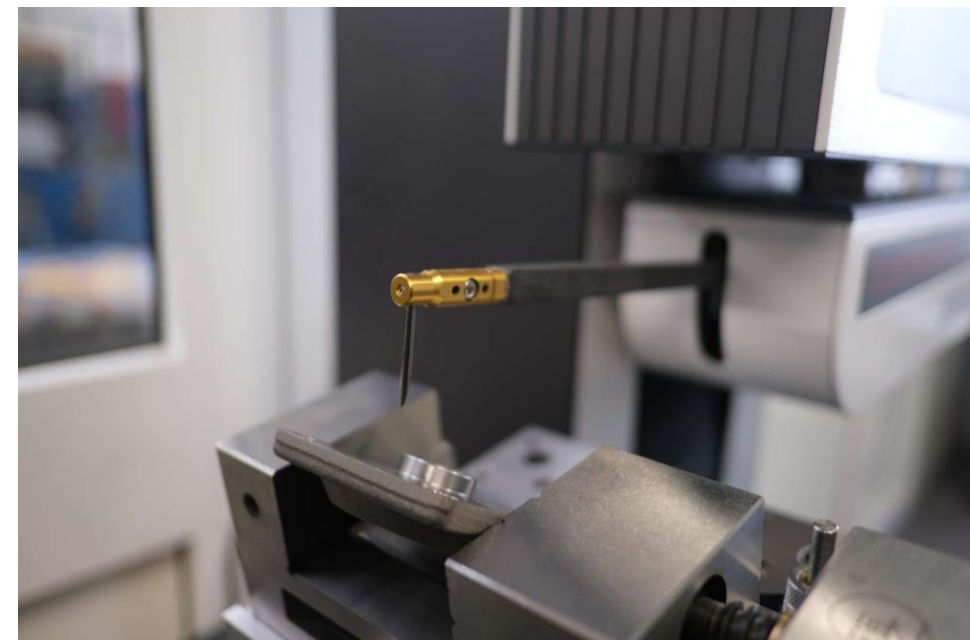

- All production departments have **fully automated** and **robotic units**
- We always focus on the most advanced **technologies** available on the market
- High production **capacity**, operational **flexibility** and a consistently high degree of **quality**

## Quality and control

- **Preventive analysis** of the correct ability to measure the achievement of the **requirements** requested by the Customer
- Maximum attention to product **quality** and constant verification of results and processing through specific high-tech machinery
- 2 **3D measuring machines**, profile projectors, roughness testers, industrial **radioscopy** machines and many more
- Quality Management System certified according to **EN 9001:2015**

## Our production

• Foundry

• Sandblasting

• Finishing

• Turning

• Milling

• Ultrasonic  
Cleaning

# Foundry

**Lamec has a total of 14  
robotic die-casting  
islands with presses  
from 220ton to 1350ton**

**Bromopress s.r.l.**

**Fonderie Cremasco s.r.l.**

# Sandblasting

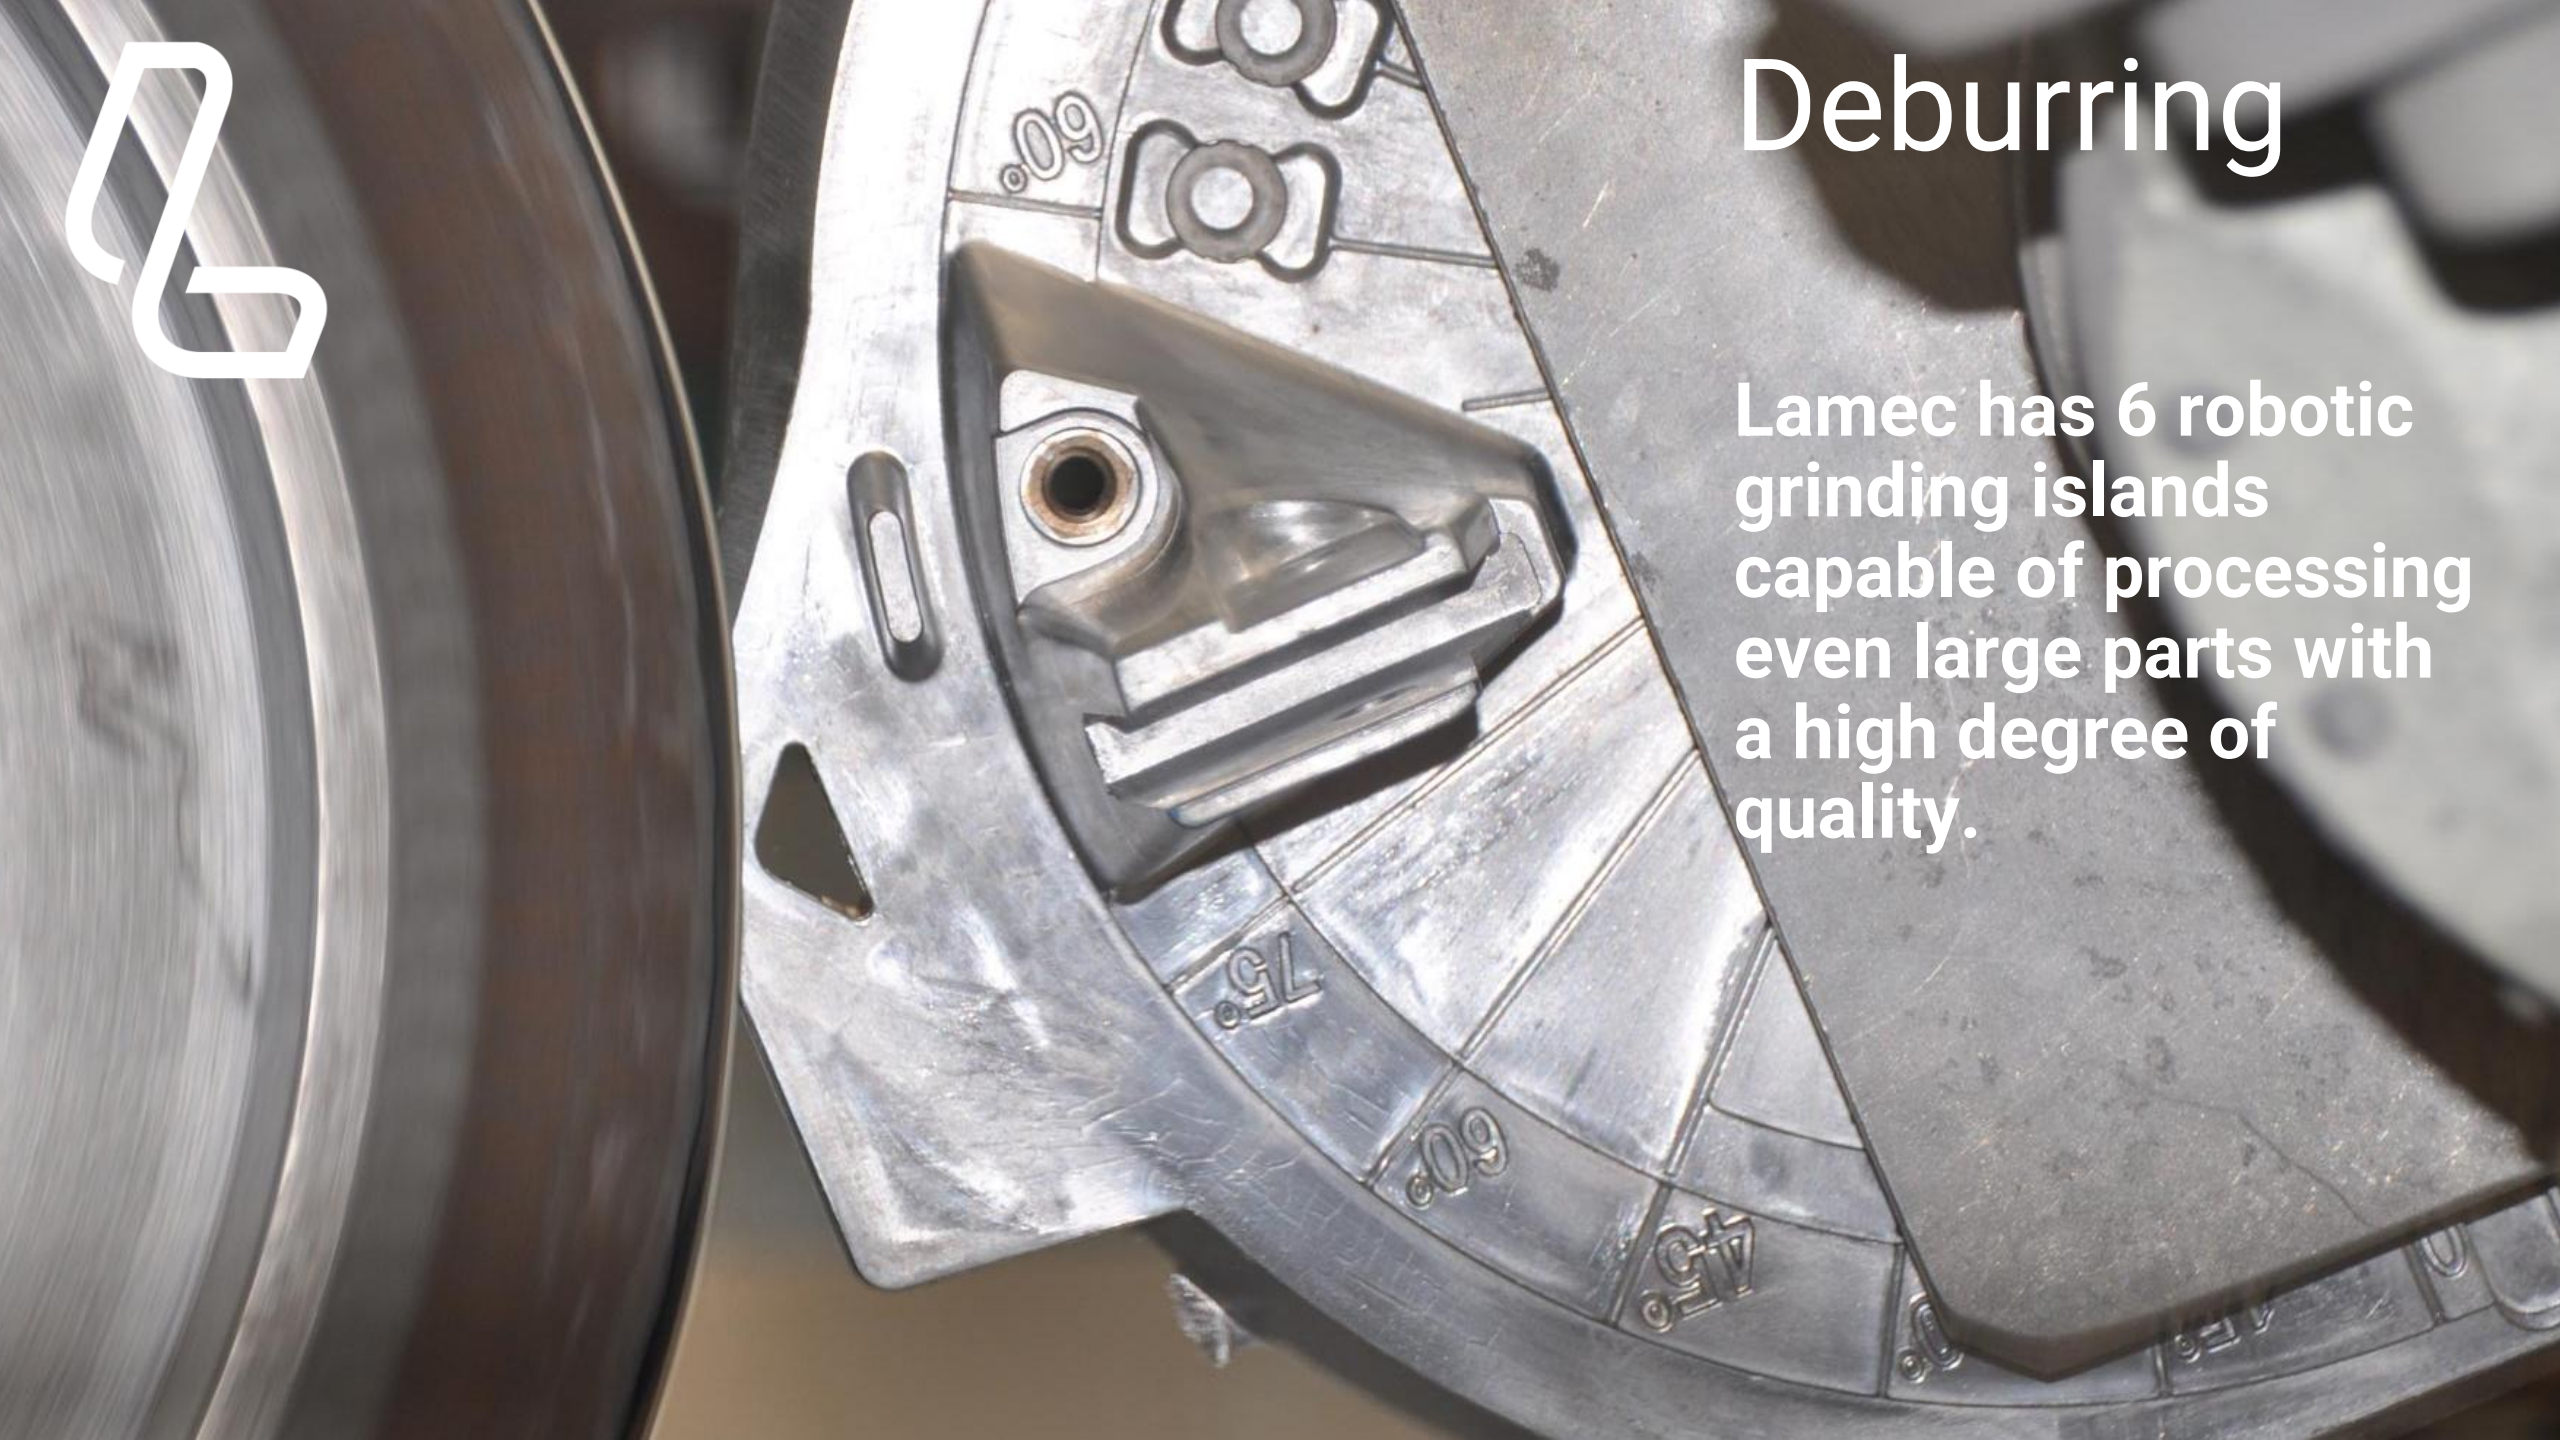

This type of process makes possible to obtain components free of burrs, sharp edges and guarantee the degree of surface roughness required by the specifications.

# Deburring

Lamec has 6 robotic grinding islands capable of processing even large parts with a high degree of quality.

# Polishing

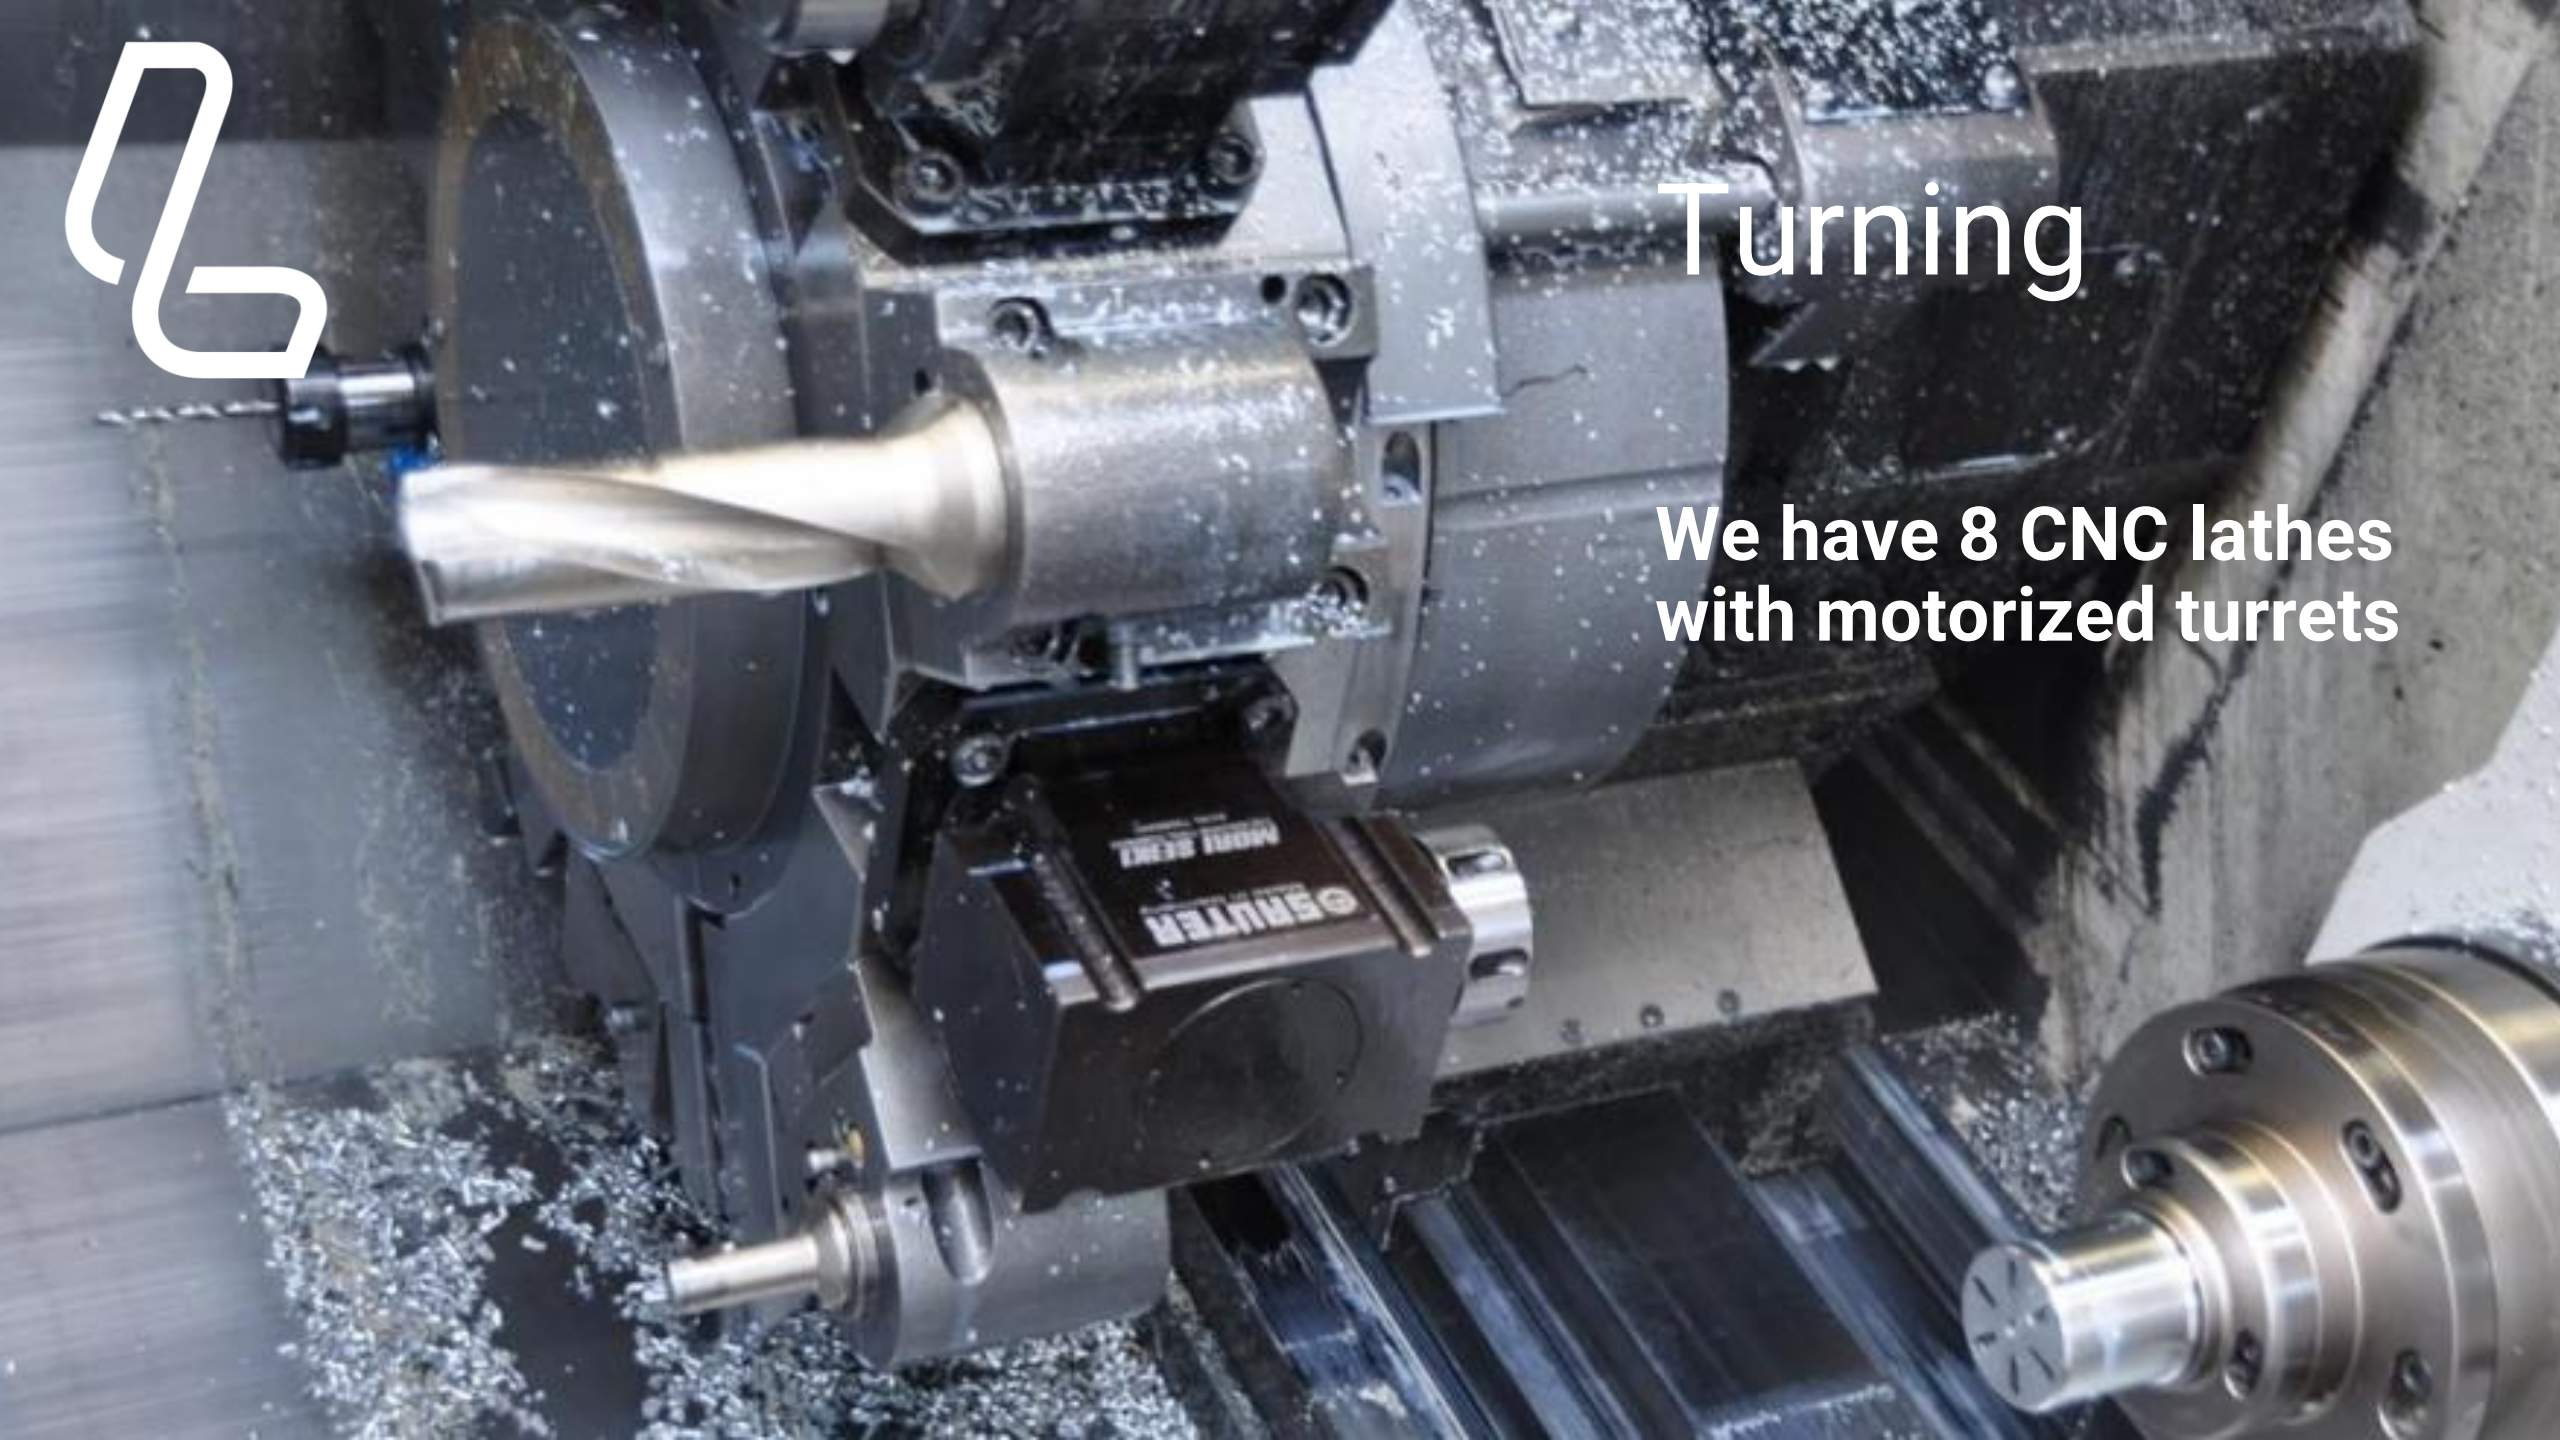

**We carry out polishing with robotic machinery lines. All with the aim of making the raw metal shiny and mirror-like**

# Turning

**We have 8 CNC lathes  
with motorized turrets**

# Milling

We have 4 horizontal and 13 vertical machining centers with 4/5 simultaneous axes and palletizing of the latest generation.

# Cleaning

**We have the possibility to perform both traditional tunnel cleaning and ultrasonic cleaning which allows us to obtain a more accurate cleaning of parts in aluminum, zinc alloys, iron, brass, steel and other metals.**

# Why choose us

## ADVANCED TECHNOLOGY

We use the most modern automation systems.

## PRODUCTION CAPACITY

We meet requests on time thanks to a large number of interchangeable machines and organizational flexibility

## HUMAN RESOURCES

Our employees are qualified and constantly trained on technological innovations

## PRODUCT QUALITY

Through the application of a Quality Management System, certified according to EN ISO 9001:2015, we guarantee compliance with the requirements requested by the Customer.

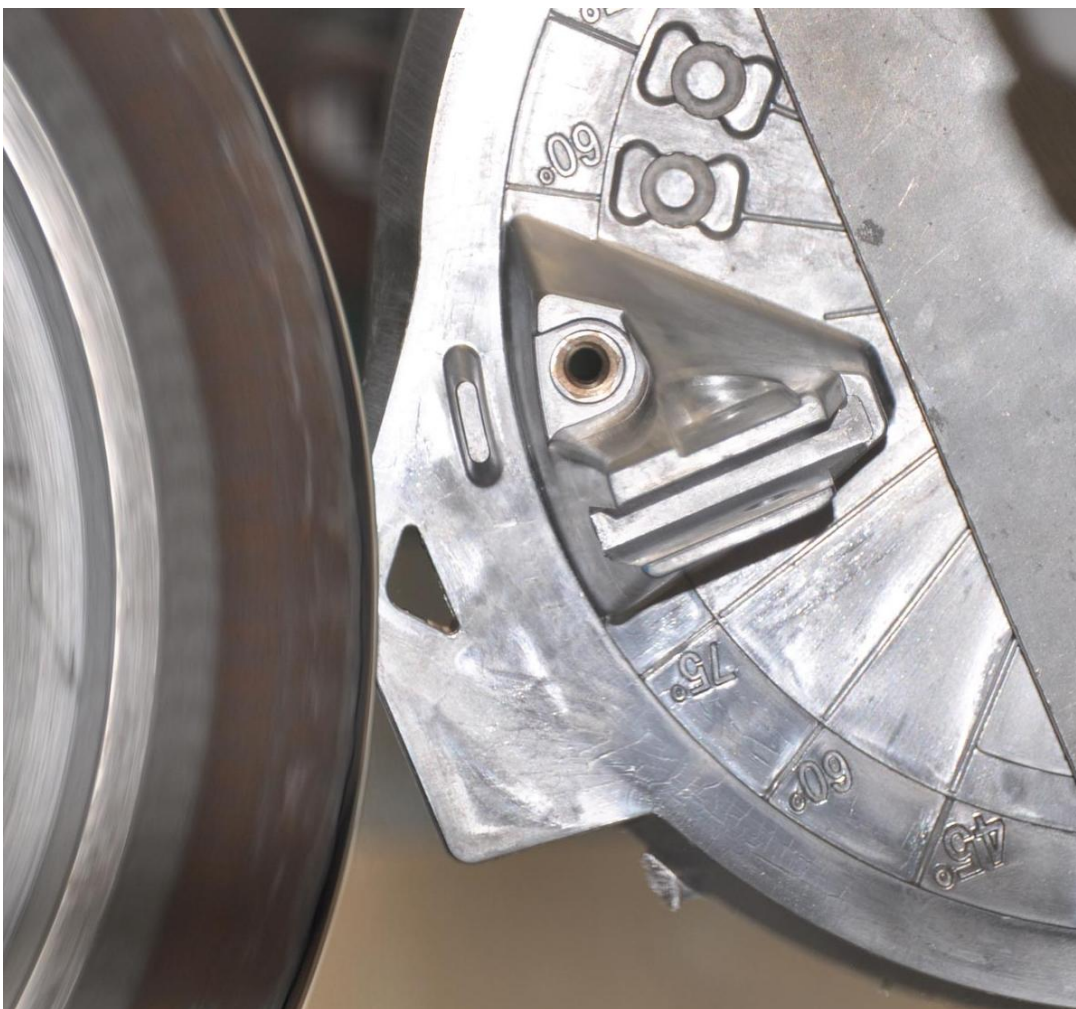

Over **40 years** of experience

Over **25 CNC** machines

Constantly evolving **innovation**

**LAMEC**
