Our Team

Company Profile

Shenzhen CDTech Electronics established in 2011, is a national high-tech enterprise specializing in TFT LCDs, Touch Displays, HDMI Displays and other display products.

The factory covers an area of **10,000** square meters, including thousand-level dust-free workshop area of over 3500 square meters. CDTech has industry-leading automatic production and testing equipment which can provide customers with standard and customized display and touch total solutions. Our products are widely used in Industrial Control Equipment, Medical, Smart-Home, Automotive and Vehicle Displays, Instrumentation, and other Information Terminal applications. CDTech has obtained **ISO9001**, **IATF16949**, **ISO13485**, and ISO14001.

- 01
- Committed to the "Zero-Defect" quality policy and our standards, CDTech strictly controls the quality of products and has establish strategic partnership with many established enterprises in Europe, Americas, Middle-East, Russia, Japan and Taiwan relied on our products and quality services , winning high recognition by customers.
  - CDTech will continue to promote investment and innovation, improve quality, and strive to become the world's leading professional display manufacturer!

# Development Path

## More than 13+ Years of Industry Experience

- **2011.9**  
SHENZHEN CDTECH ELECTRONICS was established and entered the LCD display with touch panel industry.
- **2014.7**  
Committed to "Zero Defect" quality policy, strengthened our own quality level, and established the "Aging Laboratory".
- **2014.8**  
Transformed into a manufacturing enterprise, and moved to a 1,280 square meter factory with 300 square meters of dust-free workshop.
- **2015.3**  
Obtained the "ISO9001 Certificate" for the first time.
- **2015.8**  
Won the title of "Shenzhen Software Enterprise" and "National High-tech Enterprise".
- **2016.7**  
Introduced the ERP system management.
- **2017.7**  
Successfully developed the technology of cutting LCD displays that can achieve mass-production, and obtained the utility model patent.
- **2019.2**  
Obtained the "ISO9001 certificate" through the continuous improvement of internal quality management system.

- **2019.9**  
Moved to a new factory of 5,000 square meters in Songgang, built a thousand-level dust-free workshop of over 1,000 square meters, and equipped with industry-leading fully automatic production and testing equipment.
- **2019.12**  
Made a breakthrough in the field of automotive display, improved the quality system of automotive products, and obtained the "IATF16949 certificate".
- **2020.3**  
Added CTP production line and customized CTP.
- **2020.4**  
Made a breakthrough in the medical field, improved the quality system of medical products, obtained the "ISO13485 certificate" and obtained the "ISO14001 Certificate" for the first time .
- **2020.6**  
Added the OCA full bonding production line.
- **2021.6**  
Introduced the QR code management.
- **2022.5**  
Added the fully automatic backlight assembly equipment and upgraded the CTP assembly line.
- **2024.10**  
Expansion of workshop, added fully automatic POL/LCD/CTP equipment, added glass cutting equipment

CDTECH

## Highlights Special Statement

- Features of Strong OCA Bonding

Anti-UV

Water-proof

Dust-proof

Sunlight Readable

OCA bonding is considered robust characterized by anti-UV, moisture-proof and dust-proof. OCA bonding eliminates the likelihood of moisture or dust entering between the LCD and the glass, reducing the amount of reflecting layers, improving readability of LCD displays, providing UV protection when applying displays outdoors, and increasing the display's resilience against direct physical contact.

# Adapter Board

- P/N: S070SWV128ND-DR29
- Size: 7.0" TFT-LCD Module with RTP & Parallel board
- Resolution: 800x480
- LCD Interface: MCU
- Viewing Direction: 12 O'clock
- Luminance: 280 cd/m²
- LCM (W x H x D) (mm): 165.00 x 100.00 x 6.80
- Active Area(mm): 154.08 x 85.92

20. OQC Inspection

21. Finished product packing

CDTECH

## Highlights Special Statement

- Flexible support for custom parallel boards, interface adapter boards.
- Support custom Standard High Definition Multimedia Interface (HDMI) connector.
- Connections for 5V/12V power, EDID programming and PCAP/RTP.
- TFT displays can be connected using a simple interface board, such as RGB to LVDS interface, LVDS to EDP.

# OUR MARKET COVERAGE

## Improved Sales Performance

With stable product quality, rapid response mechanism, and global marketing network all over Europe, North America, Taiwan and other countries and regions, we have established good strategic cooperation with internationally renowned enterprises, won wide recognition and praise from customers, and achieved steady increase in sales performance.

## OUR APPLICATION FIELD

Vehicle Display

Industrial Display

Intelligent Application

Medical Display

# Vehicle TFT LCD Display

CDTECH's automotive-grade TFT LCD displays combine full viewing angles, high brightness (up to 2000 nits), wide operation temperature range (-30°C to +85/90°C), anti-glare coatings, and cost-effective performance making them ideal for the automotive industry. Our products are widely used in:

**Instrument Clusters**

**Central Control Systems**

**Agricultural & Construction Vehicle Dashboards**

**Bus Rearview Mirror Monitors**

**Rear-Seat Entertainment Systems**

Why Choose CDTECH for Automotive Displays?

## ☒ Customized Solutions

Flexible designs for size, resolution, brightness, and touch integration.

Optical bonding (OCA/LOCA) for enhanced durability, impact resistance, and sunlight readability.

Anti-fingerprint, anti-reflective, and anti-UV treatments for superior outdoor performance.

## ☒ Reliability & Compliance

Full PPAP documentation (PSW, PFMEA, Control Plans) to meet customers requirements.

IATF 16949 certified, and meet rigorous thermal cycling, vibration, and humidity testing.

Resistant to solar radiation, extreme temperatures, and EMI/ESD interference.

## ☒ High-Performance Features

Ultra-wide viewing angles for clear visibility from any position.

High brightness (800~2000 nits) for sunlight readability in outdoor applications.

Glove & Multi Touch support for versatile operation.

# Industrial Display

With the development of industry and technology, intelligence has become an important direction of industrial transformation, and industrial LCD displays are widely used in our daily life. CDTech provides 2.4" ~ 15.6" high-quality industrial LCD displays with longevity, high stability, high brightness, extreme temperatures operations, and touch & display integration. They are mainly used in industrial control, human-computer interface, instrument, elevator, and other applications. For special environments and extreme weather, our products can be designed with touchable by gloves, waterproof, anti-condensation, anti-shatter, anti-UV, etc.

- Support glove touch
- Water proof
- Sunlight readable

# Intelligent Appliance Display

The regular aspect ratio of TFT LCD panels is 4:3 or 16:9, but for some smart home applications, such as refrigerators, air conditioners, ovens, fireplaces, speakers, coffee machines, etc. The bar type displays would be much better than the current mainstream 4:3 or 16:9 to display the products required information. CDTech's own bar type display cutting technology and the 2.9" ~ 15.0" bar LCD displays and options with touch panel can be widely used in these home appliances, and the bar type displays can also be designed according to the characteristics of different home appliances. It can support touch with gloves, anti-fingerprint, etc.

8.8inch 1280\*320

3.9inch 480\*128

12.3inch 1920\*720

Application field

Application field

- Various shapes
- Universal Home Appliances
- Support glove touch
- Various sizes
- First-class cutting technology
- Anti-fingerprint

# Medical Display

Medical equipment will pay more attention to the safety of users and avoid secondary harm to patients, so CDTech can attach a layer of explosion-proof film on the surface of our products and also achieve anti-glare effect. Of course, it is not limited to this, we can also develop more derivative solutions on the standard LCD display according to customer requirements, such as custom backlight, FPC (LCD module or CTP), resistive touch panel (RTP) and projected capacitive touch panel (CTP) or anti-reflective (AR) / anti-glare (AG) / anti-fingerprint (AF) coating, or customized PCB board, etc.

- Longevity
- High brightness
- Anti - glare
- Glove touch
- Water proof
- Anti- interference

## OUR ADVANTAGE

OEM/ODM

Supply Chain

Production Capacity

Management

Qualification

# OEM/ODM

## Support Customization

We support the customization of various materials, such as FPC(including the pin layout, size, position, etc.), BL, CTP(including the selection of CTP IC, cover glass, CTP FPC, etc.), RTP, adapter board, HDMI board, etc.

## Faster Development

Fast development speed, the tooling time for common parts is generally 3~4 weeks, for more special requirements, the tooling time is generally 5~6 weeks. For material suppliers with quality and price advantages, we will also review and optimize our supply chain to provide customers with quality and market advantages of OEM / ODM products to reduce customers' time costs and procurement costs.

## Rigorous Test Process

24-hour ambient temperature ageing of semi-finished FOG for each product, which helps to identify in advance whether problems will occur when the screen is lit for a long time after completion of assembly, to analyse the causes of the problems and to discuss solutions.

## Strong Development Team

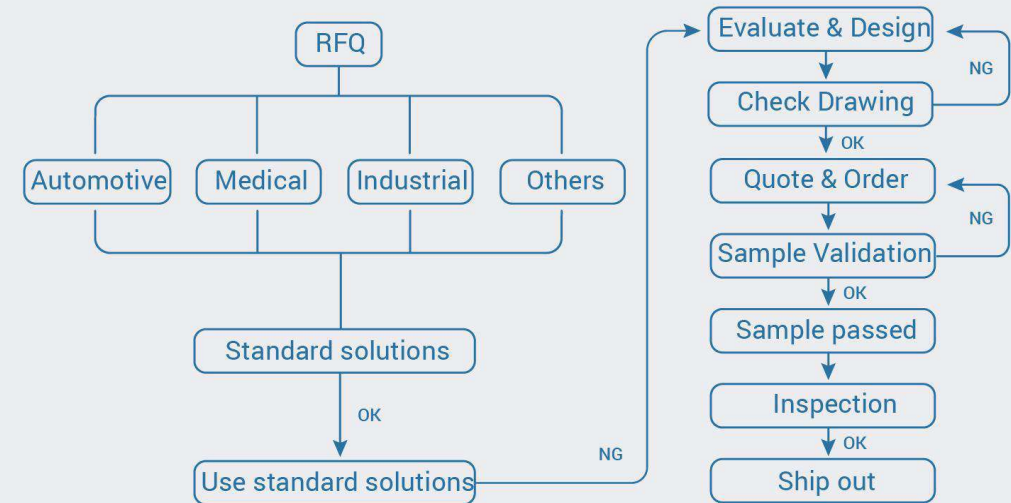

We have 10 R&D staff at present, and the R&D department is recruiting talented people and increase R&D efforts, so as to lay a more solid foundation and stronger strength for providing more and better OEM / ODM services.

## Covering a Wide Range of Industries

Our customized products include but not limited to medical, automotive, home, industrial control, audio, catering and other industries, and we have certain understanding and experience in many industry markets, we can provide OEM / ODM solutions to meet the market requirements and diversification for different markets.

# Supply Chain

## Our Relationship with Supplier

### Mutual Choice

Strictly check the qualification and production capacity of suppliers, and select suppliers from various aspects such as service, cooperation and professionalism to ensure that the materials provided by suppliers meet our internal quality control system.

### WIN-WIN

Cooperation with suppliers to achieve win-win cooperation, ensure the quality of product delivery, and collaborate to manage the design and working principle of products.

### Stable Cooperation

We maintain good communication with our suppliers and establish a stable and reliable supply chain through cooperation. Therefore, we can avoid the situation that change suppliers temporarily and repeatedly and unable to guarantee the product quality and supply.

## Why do Suppliers Work with Us?

### Support Customization

Professional R&D team and a sound quality assurance system

### Advanced Equipment

Industry-leading fully automatic production equipment and automatic testing equipment

### Integrated Solution

Focus on providing customers with display and touch total solutions

### High Quality Product

Focus on providing customers with high-quality and reliable products

### Technical Services

Focus on providing pre-sales and after-sales technical support and services to customers

## Product Types

### Backlight

### FPC

### Cover lens

## Quality Management

Overseeing and ensuring that product designs meet quality standards and customer requirements

Ensuring the quality of materials provided by suppliers  
Evaluate and select suppliers  
Provide timely feedback to suppliers and follow up on supplier improvement

Ensuring that only high-quality materials enter the production process, thus safeguarding the quality of the end product

By developing and implementing process quality control plans, investigating and resolving quality issues, analyzing and reporting quality data, driving product quality improvement initiatives

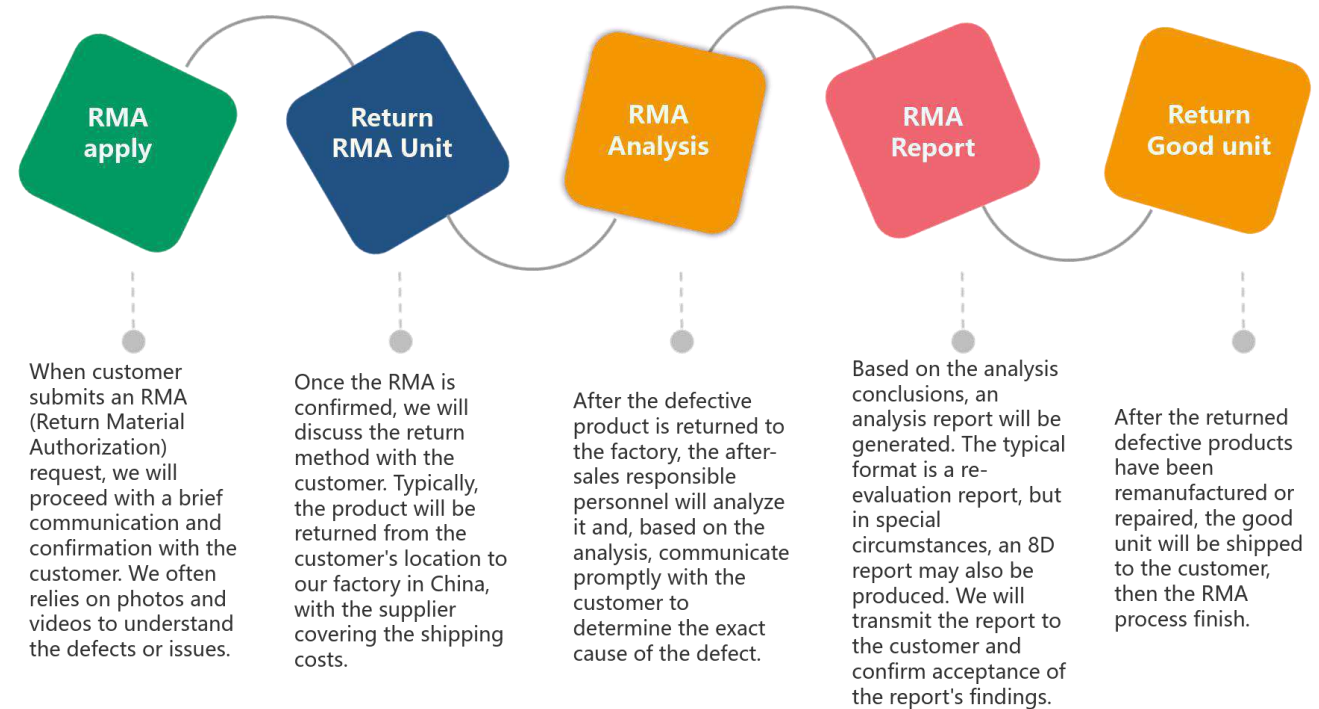

Ensuring that products meet quality standards and requirements By monitoring and controlling the quality of products at various stages of production

By conducting comprehensive inspections, maintaining quality assurance documentation, Ensuring the quality of products before they are shipped to customers.

## RMA Process

# Production Capacity

## Process Control and Process Capability

- |                                  |                                  |                                 |
|----------------------------------|----------------------------------|---------------------------------|
| 01. Polarizer Pasting            | 04. Fully Automatic Glue Machine | 07. Backlight Assembly          |
| 02. COG and FOG bonding          | 05. Function Test                | 08. Touch Panel Assembly        |
| 03. Automatic Optical Inspection | 06. Aging Test                   | 09. Finished Product Inspection |

### Process 2: COG and FOG bonding

Highlights: The workshop is full of fully automatic machines, and we combine the machines to 2 large production lines. The standard capacity of each line is 800pcs per hour, which is 200K per month. So, our standard capacity of two lines is 400k per month.

### Process 3: Automatic Optical Inspection

Each line is equipped with the AOI detection machine, which will 100% scan the bonding area. Some potential defects caused by bonding can be detected here. For example, shortage of effective particles, and the existed foreign particles or bubbles under the FPC and the Driver IC, these adverse phenomena have certain hidden function dangers. Over time, there is a risk that the product may appear abnormal after a period of use by the customer.

### Process 4 : Fully Automatic Glue

Highlights: The automatic glue machine is composed of three full-automatic machines. Before glue process, our products are all protected in the 100-level dust-free environments of the full-automatic machines, and try to avoid exposure in the air and contact with foreign particles.

### Process 8: Touch Panel Assembly

We have our own CTP line and bonding line to support air / OCA / LOCA bonding.

### Process 9: Finished Product Inspection

Highlights: In the whole process of production, we will carry out one time AOI scanning and three times full function tests. After three times of function test, we will do the fully appearance test, and then the product will be delivered to OQC. And after OQC pass, and will be bagging.

# Management

## Intelligent Management System

With the ERP management system, we manage goods in and out in a scientific and rational manner, effectively control the use of materials, realising the principle of "first in, first out" of materials, for the purpose of reducing waste and delay of materials, improving management efficiency and ensuring visualisation and control from raw materials to delivery.

Warehouse keepers can scan orders through PDA, which can quickly realize the goods-in and goods-out and ensure the consistency of inventory and physical goods. This way effectively improve the accuracy of materials-in and materials-out and efficiency of warehouse management.

## Quality Assurance System

From each batch of raw materials to every production process, we have established a set of scientific and strict quality management system, and have passed ISO 9001, IATF16949, ISO14001, ISO13485, intellectual property rights and other system certifications.

Committed to the "Zero Defect" quality policy and adhered to the guidelines of quality control, we have exerted to provide our customers with reliable products and quality services!

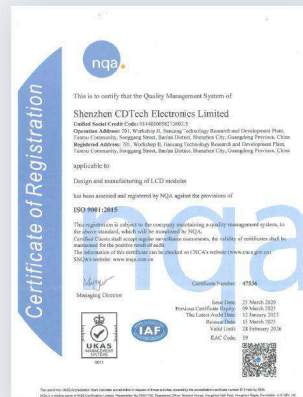

## Management Measures

Our core technology and service team has more than a decade of experience in the TFT LCD and touch screen industries. At the same time, each year, we continue to improve the cooperation between various departments to assist, from sales, R&D, production, quality, to purchasing, all require a rapid response to customer needs within the specified time frame.
