ENG

Made in Italy

Magazine Spring Specialists

BSMolle represents the evolution of Brescia's mechanical heritage, seamlessly integrated into a modern, automated production process. Every spring is the result of a perfect synergy between time-honored craftsmanship and state-of-the-art CNC technology, perfected by rigorous and regular quality checks.

"Our artisanal expertise blends with modern technology and rigorous testing to deliver precision-engineered products of certified quality, entirely made in Italy"

Our Mission & Core Values

CUSTOMER CARE

An experienced and prompt customer service, geared towards meeting our clients' evolving needs.

FEASIBILITY

Delivering innovative solutions and tangible results, even for high-complexity projects.

SUSTAINABILITY

Focus on premium materials and energy efficiency to minimize our environmental impact.

MANUFACTURING

Automated processes and rigorous inspections, compliant with quality certifications and a commitment to continuous improvement.

ENGAGEMENT

Empowering our workforce through continuous training and a diverse, inclusive work environment.

Quality

ISO 9001- certified, BSMolle ensures excellence through a rigorously monitored and constantly evolving production process. This commitment allows us to deliver high-performance products that meet the strictest quality requirements.

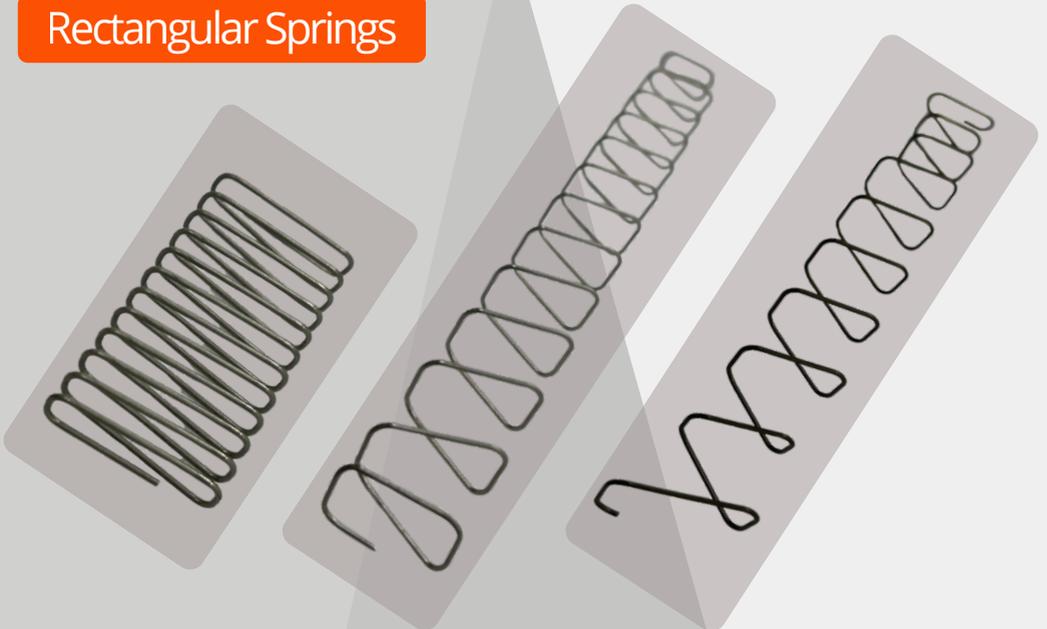

Products

Oval Springs

Rectangular Springs

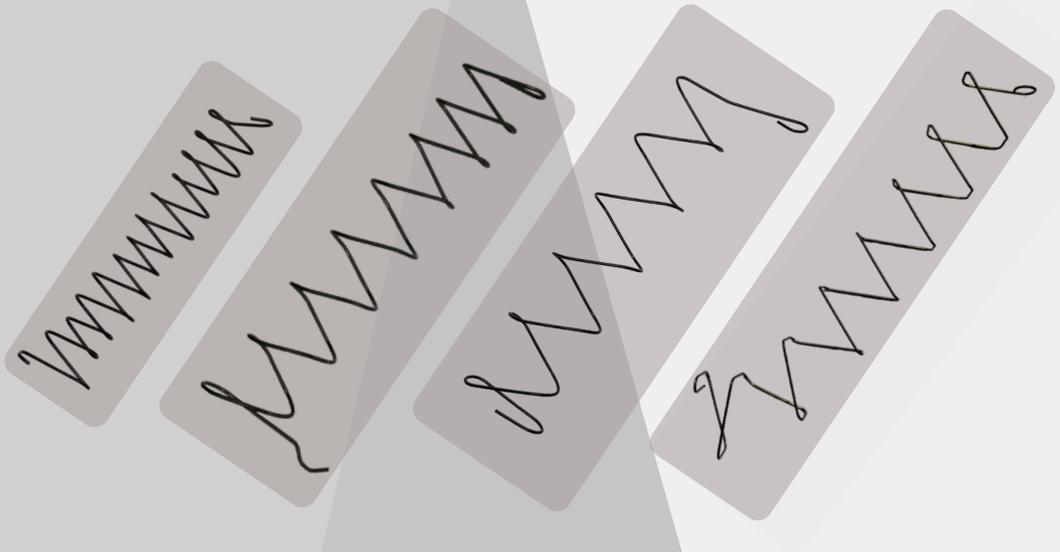

Capacity Limitation Solutions

We manufacture magazine springs with close wound coils in specific positions to limit capacity.

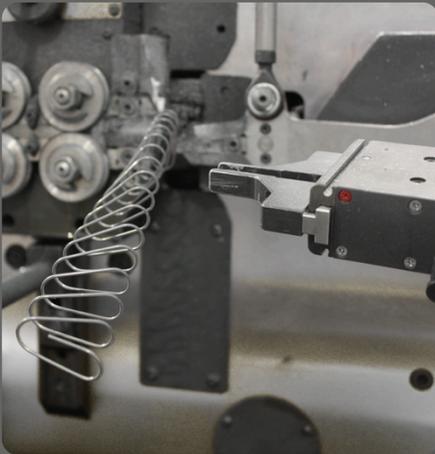

Customized springs

We manufacture magazine springs coming in fully customized shapes.

Technical Specifications

- Wire Diameter Range: 0.30 mm to 3.00 mm
- Highly Skilled Team
- CNC Production Line
- No Minimum Order Quantity

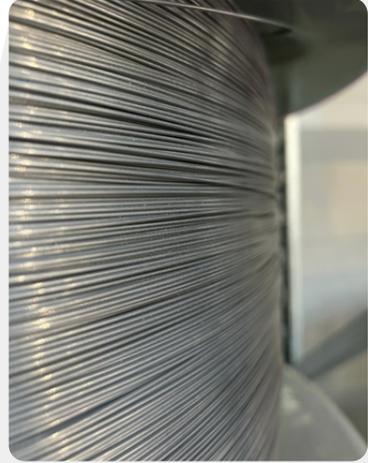

Surface Treatments

To ensure maximum protection and durability, we offer a comprehensive range of surface treatments. From **burnishing** and **phosphating** to advanced processes such as **electroless nickel plating**, **PVD**, and **powder coating**, every finish is engineered to enhance corrosion resistance and aesthetic stability. We also provide specialized solutions like **Dacromet** and **electrolytic zinc plating**, ideal for applications in critical environments or under high-stress conditions.

Materials, Packaging & Logistics

Materials

Our magazine springs are manufactured exclusively from high-quality materials, selected to ensure long-term durability and reliability. We utilize **high-tensile carbon steel**, **stainless steel**, and **chrome silicon**, each chosen based on specific applications and required performance levels. This range of alloys allows us to offer customized solutions capable of meeting the most technical and complex requirements.

Packaging

Our attention to detail encompasses every production phase, including packaging. This is engineered with a layered design to guarantee maximum protection during transit and can be **fully customized** based on requirements. This approach ensures not only the safety of the materials but also an unboxing experience consistent with each customer's identity and compliant with specific needs.
