OUR LEVEL III ICW INSERT

Stopping high-powered rifle rounds requires a hard armor plate. Using advanced materials the weight of our Level III hard armor plate has been reduced nearly 25%. Even though it's light, our Level III plate provides better protection than steel. Our TUFF-PRO-LW™ insert offers excellent multi-hit protection against a variety of common military ammunition.

The plate is triple curved to provide maximum ergonomic comfort. The TUFF-PRO-LW™ is a hard armor plate that actually helps you float in water!
