

COLLECTION OF YOUR USED INDUSTRIAL PACKAGING GOOD FOR YOU – GOOD FOR OUR PLANET

By returning your industrial packaging, you improve your waste balance, reduce your CO₂ emissions and conserve valuable resources.

 **SUSTAINABLE**
Conservation of valuable resources through reconditioning

 **EASY**
Collection of all common IBCs, barrels and canisters – independent of the manufacturer

 **RELIABLE**
Individual pick-up service by our own fleet

 **FLEXIBLE**
Additional collection points via the VIV nationwide return & collection system

 **TRANSPARENT**
Clear and consistent conditions for the acceptance of used industrial packaging across the entire Bayern-Fass Group

 **SAFE**
Highest possible certified safety for transport, reconditioning and recycling

 **PROVEN**
Many years of experience as well as competence in the reconditioning and handling of Dangerous Goods

WE KEEP THE
PACKAGING CYCLE
GOING

ONE-STOP SOLUTIONS

YOUR PACKAGING – OUR COMPETENCE

For more than 150 years, Bayern-Fass have been looking at industrial packaging throughout its entire life cycle – from our steel drum production, to the delivery, collection and reconditioning of all industrial packaging types, as well as our own HDPE reprocessing, the Bayern-Fass Group is covering all stages of the packaging life-cycle.

Our goal is to reuse as much packaging as possible. When used, empty industrial packaging such as IBCs, plastic drums and cans are no longer suitable for reconditioning and reuse, we convert them into our BAYLEN® recyclate and thus close the material flow in a true circular economy.

Our certifications under BAM GGR 001, DIN EN ISO 9001, 14001 and 50001, in addition to waste management licencing, guarantee the highest possible security in dealing with your returned packaging.

THINKING IN CIRCLES

THE LONGER A RAW MATERIAL CAN BE PRESERVED IN THE CYCLE, THE BETTER

RECONDITIONING:

Your industrial packaging is cleaned, refurbished, then tested and inspected through a multi-stage process in accordance with Dangerous Goods Regulations. Following that, they return to the market as reconditioned goods.

REUSE:

Compared to new production, each reused, reconditioned packaging saves a significant amount of harmful CO₂ emissions and also conserves valuable resources.

RETURN:

Simply register your empty industrial packaging by e-mail and we will pick it up reliably.

RECYCLING:

If used industrial plastic packaging can no longer be reconditioned, we use the materials to produce BAYLEN® rHDPE – and thus close the recycling cycle.

BAYLEN®:

Our HDPE recyclate is made of 100% post-consumer plastics and is suitable for the production of a wide range of industrial plastic products. A real and sustainable alternative to the consumption of new, raw materials.
