

# pickFeeder

## Robotic bottle unscrambler

### The most versatile and flexible solution on the market

This robotic unscrambler, configurable with one, two, three or even four robots, offers a wide range of applications and possibilities. Our combination of delta robots with an intelligent track system makes the pickFeeder the most versatile machine of the market, optimizing the performance of the intelligent systems and guaranteeing the best soft transfer in the world.

Thanks to the artificial vision, picking and tracking systems developed, the equipment will adapt automatically to the changing requirements in terms of shape, colors, size and needs of the packaging lines. This also has a positive effect on the total cost of the equipment throughout its entire life cycle.

Maximum versatility

Immediate format changeover

New formats, cost 0

Do It Yourself

Permanent bottle vision

Extreme care of the container

Boosted productivity per m2

Taylor made solutions

### Technical specifications

Max. bottle volume	up to 2 L
Max. mechanical performance	up to 400 bottle/min

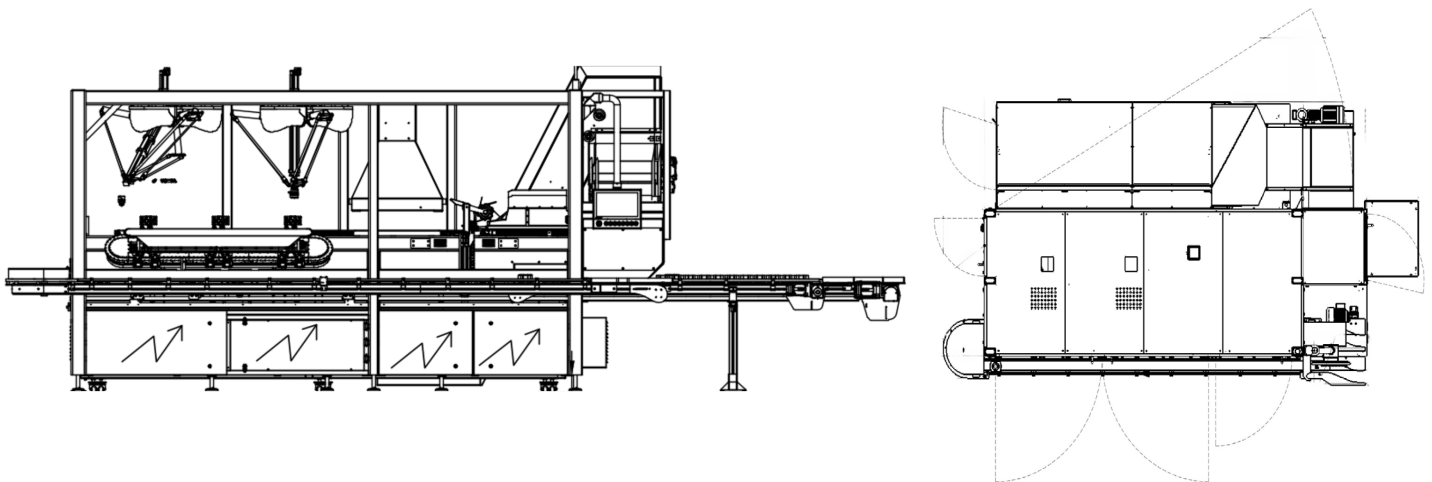

# Integrated functions

Allows the integration of other functions in addition to container unscrambling

## Unmatched OEE

When availability, performance and quality are optimised, the result is unparalleled Overall Equipment Effectiveness (OEE). Achieving this means that the line is operating at its peak potential, increasing production rates while reducing costs and improving overall competitiveness in the market.

## Industries

Pharma

Beauty

Personal care

Food
