

The leader in human-centric cybersecurity

74%

of data breaches
rely on exploiting the
human element

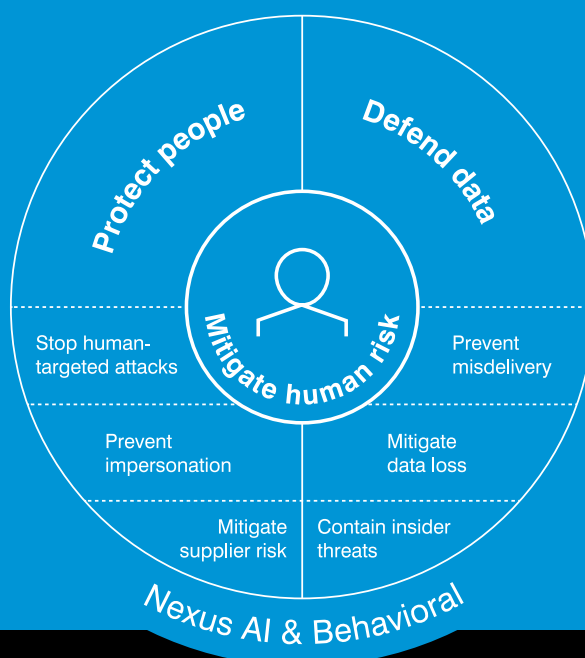

95%

of cybersecurity
issues can be traced
to human error

80%+

of cyberattacks start with
unauthorised access of
privileged user identities

We protect your people from
targeted threats, data loss risk
and human error.

Protect people

Our multi-layered threat defence stops human-targeted attacks (including 99.99% of all email threats), prevents impersonation and mitigates supplier risk.

Defend data

Our proactive information protection analyses user behaviour and content across all channels to defend data from careless, malicious and compromised users.

Cybersecurity's most advanced detection stack

Detect a wider range of threats

Block attacks more quickly

Contend with fewer false positives

Four layers of detection give you unmatched protection that evolves at the speed of today's threats

Detection Engineering

Uses a combination of rules, signatures, static analysis and sandboxing to instantly stop known threats.

Threat Intelligence

Uses trillions of data points and human analysis to identify emerging threats and new techniques.

Behavioural AI

Continuously analyses data flows to detect unusual activity and patterns to reveal suspicious behaviour and unseen threats.

Semantic AI

Blends machine learning and natural-language processing to analyse context and intent to stop social engineering techniques that exploit your people.
