geoCapture GPS-Tracking

This is how it works: GPS-trackers will be installed in your vehicles. These trackers detect the current location of the vehicle and transmit it to geoCapture's servers via mobile service. You can view the current location of your vehicle online.

No software installation - All you need is a PC and an internet connection.

✓ Advantages

- Current Location Information
- Performance Record for Clients
- Traceability
- Anti-Theft Protection
- Simple Scheduling
- Less Overtime Work
- Base for Post Calculation
- More Service Quality
- Increasing Customer Satisfaction
- Improved Organisation
- Reduced Reaction Time
- Saves Time and Money

Functional Overview

Mobile Time and Project Timekeeping

Employees can clock in with personal transponders through sensors inside the vehicles. The working hours are immediately transmitted to the headquarter. No manual book of hours needed.

Alert

geoCapture will automatically send a message in case of conspicuous activities. That way you can react immediately.

Logging

Data of locations, working hours, trips and downtime will be recorded continuously. Easy traceability in case of discrepancies with clients, police or employees.

Data Evaluation

Extensive Data will be established by GPS Trackers. Therefore geoCapture offers numerous evaluations in order to locate flaws within the vehicle fleet.

Distance Inquiry

Simply locate the closest driver near a client by mouse click in order to react faster to short notice requests.

Anti Theft Device

Determine who will have permission to operate your vehicles. The driver identifies himself by his transponder before the initial trip. Only then he is able to start the engine.

Route Optimisation

By route planning you put sites of operation in optimised order. Journey times and arrival times are calculated. Delays are visualised.

Messages

You can send messages to your employees simply from your PC.

Tachograph

With geoCapture you can readout the tachograph via mobile service. A calendar operates the download. All data will be lawfully filed.

Driving and Rest Period

geoCapture detects driving and rest periods and calculates the remaining driving journey time. Infringements will be diagnosed and can be evaluated.

Projects

Working hours and immobilisation time, driven distance or operation hours will be automatically allocated to existing projects. You will receive a detailed project documentation.

Driver Identification

The drivers will login before each trip through personal transponders. That way you will know who operated the vehicle.

Logbook

geoCapture offers the ideal logbook. Regardless of a 1% agreement or logbook for the road traffic licensing department - geoCapture offers the ideal solution.

Workshop Appointments

geoCapture detects run time of vehicles. Preserves utilisability of your vehicle fleet and you receive reminders for maintenance appointments.

Truck & light Vehicle Navigation

geoCapture provides direct access to GPS Systems inside each vehicle. Orders, routes or messages can easily be send by mouse click.

Remote shutdown

You can simply switch off a vehicle or a machine through built-in GPS Trackers. That way you avoid unauthorized utilisation.

Tour Controlling

Tour Controlling is especially applied to scheduling waste collection and street cleaning. Operation schedules can be created, optimised and monitored according to street maps.

CAN-Bus / FMS

You will receive direct access to various data of each lorry. Besides performance data and consumption data you can also consult the tachograph's status.

Interfaces

Would you like to use your GPS data within your system? No problem - geoCapture offers numerous interfaces for your software.

Operational Planning

Plan your operation of personnel or machines - individually or for crews. Workshop, holiday or illness will be taken into account.

GPS-Tracking with geoCapture

Many Options

geoCapture's GPS - tracking provides constant information about your vehicle's current location. But that's not all . geoCapture helps you with disposition, mobile time registration and provides gapless performance records. Our system amortises itself within the shortest period of time. Costs will be reduced and profits will increase. It's a win-win situation.

geoCapture offers

- Worldwide Tracking in Real Time
- No Contracts
- Data History without Limits
- Flexible Pricing
- Interfaces free of Charge
- Proper Software Development
- Excellent Service
- Reliable Technology
- Data Centre in the EU
- EU Roaming

plus

- Constant Overview
- Flexibility during Modifications of Vehicle Fleet
- Automated Reports
- Pay what you need
- Link to existing Systems
- Software development upon Customer's Request
- Support without Waiting Loop
- Investment Protection
- Existing Data Protection

*„We commit to our clients by performance
and not contracts.“*
