Fachpack 2024

Automation is the key - Lantech trims shipping packaging for efficiency

Malden/NL. Lantech will be showcasing state-of-the-art automation solutions at Fachpack (Nürnberg, September 24-26 2024, Hall 1, Stand 1-415). The highly efficient packaging systems set standards in warehouse logistics and optimises the dispatch of goods.

Benefit from right-angled cases

The CI-1000 automatic inline case erector combines high performance with flexibility. Users achieve a speed of up to 25 cycles per minute and can process many types of cases, with possible dimensions ranging from 200 mm x 150 mm x 150 mm to 500 mm x 325 mm x 520 mm. The machine masters the challenge of always producing rectangular cases despite the changing properties of the corrugated cardboard as well as varying temperature and humidity. This maximises the stability of the packaging and makes it ideal for the logistics chain. The case bases can either be sealed with Hot Melt or adhesive tape.

Time-saving stretch wrapping

Stretch wrapping machines are a necessity for professional load securing on pallets. With the QL-400XT semi-automatic stretch wrapper, Lantech offers a particularly efficient packaging solution. Compared to conventional machines, each wrapping process is shortened by two minutes because the film is automatically attached to the pallet and cut off after wrapping. This is made possible by the patented "XT Cut and Clamp" function, which is purely mechanical and requires neither compressed air nor electricity. Another advantage is the intelligent "Load Guardian" control system. The system creates special profiles with the appropriate retention force for frequently occurring loads. This saves users time and avoids operator errors. The QL-400XT stretch wrapper processes up to 35 loads per hour with a maximum diagonal of 1830 mm and a maximum height of 2030 mm. The processed film can be pre-stretched by up to 300 per cent.

About Lantech

Packaging machinery manufacturer Lantech is a global leader in Stretch wrapping machines and robust, efficient case and tray handling machines. The US family-owned business, founded in 1972, designs, builds and services packaging machines, conveyor modules and other complementary systems. Machines are built in the Netherlands (Malden) and the USA (Louisville KY) with additional offices in Australia and China. The European office in Malden (the Netherlands) designs and assembles case and tray handling machines. With more than 200 employees and a strong network of partners, sales and service within Europe are organized from there. www.lantech.com
