

AN OASIS OF JAPAN IN THE HEART OF EUROPE

Surrounded by specimens telling us a hundred-year-old story, **twenty-five years for a company** could appear to be a short time.

Nevertheless our twenty-five years are made up of **day-to day experience**, constant **care** and an always **increasing knowledge** of these amazing plants.

Over our twenty-five years we have become a **company improving** itself continuously and, at the same time, preserving the warm atmosphere of a small-sized friendly team. With our **35,000 m² nursery** and **3,000 specimens** available all over the year we are regarded as a **landmark and leader in the European wholesale market**.

Twenty-five years of **passion** and constant dedication in our sector have defined us **highly specialized and professionalist**.

THEY ARE OUR
MACROBONSAI,
OUR **NIWAKI**.

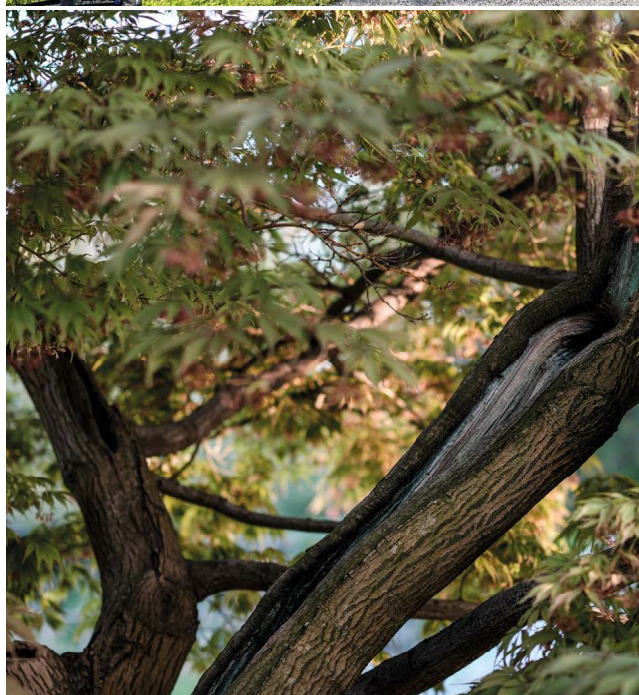

WE, WE ARE THEIR GUARDIANS.

A passion for **Macrobonsai**, in the narrow sense of the word, mixed up with the charming world of symbols and sounds, colours and flavours gathered on our trips to **Japan**, which has now become like our second home.

Our selection of the european green heritage europe: let's discover it!

A fine selection of **large sized** and **specially shaped** plants, unique specimens from **Italy** and **Europe**. Selected from long-term professional nurseries and then grown in pot or Air-pot on our nursery in the north of Italy, to offer you **a well-rooted and acclimatised unique plant** for your garden project.

IMPORT AND ACCLIMATIZATION

Our plants, both of Japanese and European imports, are selected from long standing professional nurseries: we ensure therefore a quality product right from the start. Then they are grown for **at least six months in pot or Air-Pot** on our nursery in northern Italy, on Lake Como, in a climatic zone that fluctuates between **-10°C and -5 °C** in the winter period, so as to always offer you a **healthy plant, well-rooted and acclimatised** for your garden projects.

SIZE DOES NOT SCARE US

Transporting such large specimen plants might seem impossible, yet we do it!

We load them carefully ensuring they are not damaged, and we **forward them all over Europe, whether it be a single plant or a full load.**

In this way, after a month-long journey by sea, a little bit of Japan can finally reach every corner of Europe.

We prefer direct deliveries, which guarantee the integrity of the plants.

In this way, in fact, the plants reach their destination as we have loaded them, without anyone that intervenes to modify the load that we secured.

We avoid loading when temperatures are high; if we have no choice then we protect them accordingly with jute canvas pieces, to ensure the plants don't have direct contact with hot metallic parts of the truck. The same is done to the apex of the plant, this way the hot curtain cannot burn the foliage.

For all shipments abroad, **we rely on certified transport companies**, who travel only with appropriate trucks and in compliance with EC regulations.

For shipments where customs operations are required, **we rely on import-export customs offices specialized** in the live plants sector.

Our plants travel **in compliance with the phytosanitary regulations provided by the EC**, after having finished the regular quarantine period and accompanied by the passport where necessary.
