

Prevent Risks Across Your Software Supply Chain

Automatically block risks introduced into the pipeline and ensure the integrity of each workload, all from a single location.

Are you struggling to release secure products?

The challenges DevSecOps often encounter:

- Identify risks across the entire software supply chain
- Pinpoint critical code flaws
- Get development to fix them

All that without slowing down delivery timelines in today's demanding business environment.

Release Secure Products With Confidence

- ✓ Get continuous end-to-end visibility and traceability from code to cloud
- ✓ Remediate risks based on business priority and context
- ✓ Easily fix vulnerabilities based on automatic triage and best practice recommendations
- ✓ Enforce security policies and prevent new attack types based on proprietary research and threat intel
- ✓ Automate workflows, tickets, alerts, and remediation

Continuous software supply chain security from code to cloud

OX Security PBOM Dashboard

About OX Security

At OX, we believe security should be an integral part of the software development process where released products are so fundamentally secure that our customers never need to think about it. Through a combination of best practices from risk management and cybersecurity and a fantastic user experience, OX makes software supply chain security processes continuous - from design to production - and easy for developers to adopt. Founded by Neatsun Ziv and Lior Arzi, who previously led Check Point's Security Division, OX provides security and development teams with the visibility, prioritization, and automated remediation they need to bring security and integrity to every step of the software development lifecycle and release secure products on time.
