Go Fresh!

THE REAL
CARNIVORE
DIET

Complete meals made with fresh meat
that satisfy your cat's instincts,
enriched with olive oil, herbs
and probiotics.

THE BEST VERSION OF DRY FOOD AS WE KNOW IT

The gently extruded method is the friendliest thermal processing method.

This formula has been developed in collaboration with veterinarians to meet the biological needs of the cat as an obligate carnivore. It is based on high-quality animal proteins and essential fatty acids, while containing a reduced amount of carbohydrates compared to most dry foods. This composition promotes high digestibility, supports muscle health, and enhances overall well-being, offering a balanced and biologically appropriate diet.

TASTE OF REAL PREY!

Your cat, the little hunter of the house! She may be cuddly and sleepy on the couch, but inside she is still a born hunter!

And like every feline, she needs animal protein.

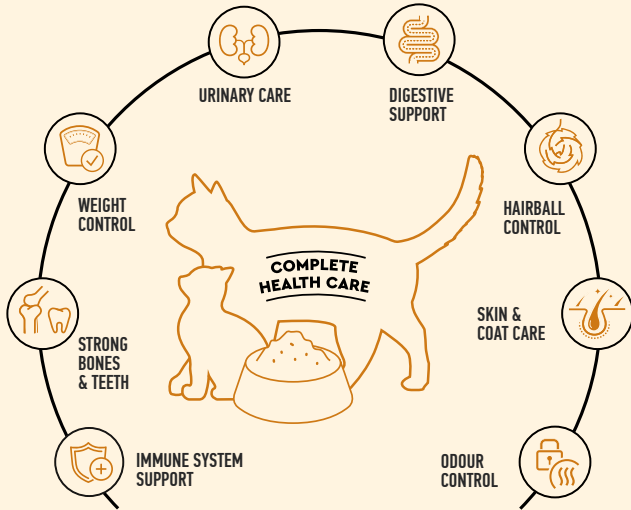

The Insticat Go Fresh range combines a strong dose of protein from fresh meat that satisfies her instinct, with the beneficial properties of olive oil, herbs, and probiotics, keeping her full, healthy, and full of energy.

Nature doesn't feed cats carbohydrates

There are no carbohydrates in a feline's natural prey. Carbohydrates are easily converted into fat, causing weight gain, while they are responsible for an increased risk of type 2 diabetes.

BENEFITS

86-89%
ANIMAL PROTEIN
