

Flexible solution for urban spaces

FLEXDEX® are terrace-like platforms with structures for **movement, meeting, education and greening**. Based on different basic shapes, the system is designed to be modular and mobile.

The modules, which can be combined in any number and arrangement, can be set up wherever they are needed.

The flexible system is particularly suitable for use in city centres, green spaces, clinics, outdoor swimming pools, sports clubs, youth and leisure centres, retirement homes and educational facilities.

Street furniture objects of the future

Increase the quality of stay, promote social interaction and communication, reduce heat islands, create green spaces, provide information; the different FLEXDEX series can be used to create meeting, play, sports, break, information, retreat or recreation areas, depending on the equipment.

**FLEXDEX® can activate derelict areas, redesign streetscapes, revitalise city centres, upgrade recreation yards, structure urban spaces or provide missing infrastructure.**

Customisation; whether logos, lines, board games, corporate design or photo motifs, there are virtually no limits to creativity. We look forward to your ideas!

Starting position      End position

Material & equipment

The stable frame construction of the FLEXDEX® is made of galvanised, powder-coated steel (optionally also stainless steel) and has a floor covering made of local wood, FSC®-certified hardwood or a water-permeable cork covering. Thanks to its outstanding material properties, cork is perfect for workout, seating or lounging areas.

Cork dries quickly, does not heat up in summer and feels pleasantly warm even in the cooler months of the year.

Height-adjustable feet on the underside of the platform ensure stability and compensate for uneven or slightly sloping surfaces.

All elements can be easily moved and repositioned thanks to a forklift/lift truck mount. Generous dimensions allow relaxed use, while optional ramps ensure easy, safe access and accessibility.

Due to their high dead weight, FLEXDEX® units do not need to be anchored; when assembled together, they are theft-proof and suitable for public spaces.

Arrangement examples of the circle series

Quality and sustainability

Clever design, high-quality production "made in Germany" and honest, environmentally friendly materials materials and the reduction to just a few materials create products with a long service life, low maintenance and high recyclability with a low carbon footprint.

Variety of combinations

The individual modules of the respective series can be put together individually, supplemented with further modules at a later date and freely combined in number or arrangement, time and time again.

Combination example atrium; barrier-free; easy access is guaranteed via non-slip ramps.
