PLANET-STONE

The better stone!

Limitless - light - robust

- Sustainable real stone effect
- Individual geometries possible
- Lighter than solid stone
- Extremely durable

PLANET-STONE

The PLANET-STONE effect lacquer makes it possible for wood, wood materials, plastic and many other substrates to be coated with real stone pigments. The finished coated surface is indistinguishable from solid stone slabs. It is characterised by outstanding resistance, is extremely durable, easy to clean and with its PU base meets the requirements of DIN 68861-1B.

With the effect lacquers of the PLANET-STONE series, the most individual part geometries can be refined with genuine stone pigments. PLANET-STONE can be used in all furnishings and interior fittings including kitchens and bathrooms, stairs, floors and wall panels.

PLANET-STONE is made of a palette of ten stone powders added in the (gravimetric) mixing ratio of 60 parts powder to 40 parts HYDRO or PU base lacquer. Other colour variations can be achieved with PLANET-STONE by applying a light or dark basecoat onto the substrate before lacquering. PLANET-STONE is traditionally applied with a paint gun and large nozzle. Alternatively the powder can be scattered by hand into the base lacquer when still wet. Subsequently applying a final clear top coat creates a smoother surface and offers more shine options.

PLANET-STONE also scores highly on sustainability. It avoids massive stone blocks having to be hewn from quarries and then transported. The stone powder comes from cutting slabs of real stone, thus providing a further sustainable use.

The PLANET-STONE colour tones

Powder order number:

Due to deviations arising from the printing process, the colouring in images and photos may deviate from the original.

Ordering information

HYDRO Base lacquer	HE 65192
PU base lacquer	DB 48900-0901
Mixture (by volume) 10 : 1	DR 4071
Packaging sizes	5 l, 25 l

PLANET-STONE powder	ZD 41xx
Packaging sizes	5 kg, 25 kg
