

Doderm Hydro RepairGel

Natural Innovation for your pet's skin

Science in a bottle

Everything you need to know

Doderm Hydro RepairGel

The skin revolution

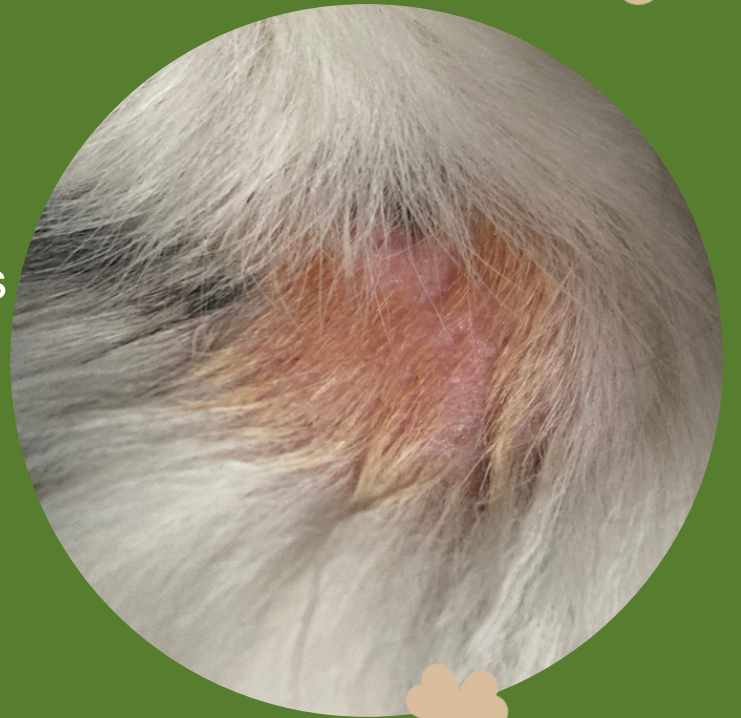

We all know it - skin problems in our pets! Whether it's a minor wound, skin irritation or an itchy spot - Doderm Hydro RepairGel is the must-have for all pet owners. The gel supports the skin so that it becomes and remains resilient in just a few days.

The secret is the use of antibodies from the surplus colostrum of cows. The antibodies in the product rebalance the skin's microbiome. Together with our other natural ingredients, we create a skin revolution for our animals.

The natural alternative

We rely on the power of nature. In addition to antibodies, we only use natural ingredients that help the skin to heal itself. So we don't need cortisone or antibiotics

A whole 10 years of scientific research in collaboration with veterinarians has gone into our skin gel. In this way, we strengthen the good skin bacteria and give them everything they need to regenerate the skin's resistance.

Easy to apply & absorbs quickly!

How to use?

To get the best results, apply a thin layer of the gel to the skin 2-3 times a day. Due to the natural formula of Doderm Hydro RepairGel, it can be used long-term.

Try it for yourself!

Small bottle, big impact
