PLATFORM OVERVIEW

One European platform for exposure & vulnerability management

Holm Security helps organizations build a systematic, risk-based and proactive cyber defense against threats such as ransomware and phishing. Our Next-Gen Vulnerability Management Platform assesses every attack vector in one place, from servers and cloud platforms to APIs, identity and your people.

AT A GLANCE

200,000+
vulnerabilities detected

9
attack vectors, one risk model

100%
European organization

How it works

Security Center carries one workflow and one risk model across every product in the platform.

01
Discover
Attack Surface Management continuously finds your assets, including shadow IT, forgotten systems and blind spots.

02
Assess
Automated, continuous assessment of systems, web applications, cloud platforms, APIs, identity, operational technology and users.

03
Prioritize
AI-driven threat intelligence ranks findings by severity, impact, ransomware exposure and likelihood of exploitation.

04
Remediate
Full workflow support, verification that fixes worked, and reporting that tracks risk over time.

A 100% European organization DATA SOVEREIGNTY

EUROPEAN COMPANY
A European organization, headquartered in Stockholm, Sweden, serving organizations across Europe.

EUROPEAN INFRASTRUCTURE
The platform is built and operated on European infrastructure, with no dependency on providers outside Europe.

DATA HOSTED IN SWEDEN
Cloud data processing and storage in Sweden. On-premises keeps sensitive data inside your own environment.

One platform, unified products

Attack Surface Management (ASM), including External Attack Surface Management (EASM), is integrated throughout.

PRODUCT	WHAT IT ASSESSES	DEPTH
System & Network Security	Servers, computers, network devices, office equipment, IoT, Kubernetes, operational technology	200,000+ vulnerabilities
Web Application Security	Self-developed and commercial web applications	DAST and SCA, OWASP Top 10
Cloud Security	Azure, Microsoft 365, AWS, Google Cloud, Oracle Cloud	CIS Benchmarks, agentless
API Security	REST, GraphQL and SOAP APIs	OWASP Top 10 API
Phishing Simulation & Awareness Training	Your users, the human attack vector	Simulation plus training
Hybrid identity	On-premises Active Directory and Microsoft 365	186 Active Directory checks, 117 Microsoft 365 checks
Attack Surface Management	Internet-facing, local, domain and cloud-native assets	ASM and EASM included

DEPLOYMENT

Cloud in hours, or on-premises

Cloud. No hardware or software required, live in a few hours, scanning internet-facing and local infrastructure through unlimited scanners.

On-premises. Installed in your own virtual environment, with no sensitive data communicated over the internet.

MEASURE & COMMUNICATE

Reporting & industry benchmarking

Internal and external reporting on smart key metrics, plus a view of how your risk exposure compares with other organizations in your industry.

Out-of-the-box integrations with SIEM, CMDB, ticketing, patch management and CI/CD keep findings inside existing workflows.

COMPLIANCE SUPPORTED

NIS / NIS2 | DORA | CRA | GDPR | ISO 27001 | PCI DSS (ASV) | NIST framework | CIS Benchmarks

Find out what your attack surface looks like

We'll show you what cybercriminals see today, and what a systematic, risk-based program looks like for your organization.
