

Why Greenbone?

Vulnerability management that stays ahead of attackers:
Market-leading detection and full European data sovereignty in one platform.

THE REALITY

Cyberattacks are daily business. Distributed IT, legacy systems and shadow IT grow your attack surface faster than teams can keep track.

THE GAP

Firewalls only react once the attack is underway. Attackers often know your weaknesses before you do.

THE SOLUTION

OPENVAS identifies vulnerabilities continuously and automatically, closing your security gaps before they are exploited.

UP TO
99%

Lower risk and impact of cyberattacks through consistent vulnerability management, the world's most widely used open-source VM.

Available as hardware appliance · virtual appliance · cloud

YOUR ADVANTAGES WITH OPENVAS

Market-leading detection

Ranked #1 in the Pentest-Tools benchmark 2024. Over 200,000 active tests instead of mere version checks, reliable, with fewer false positives.

Protection in record time

New tests usually within 24 hours of disclosure, fed by six independent sources, resilient if any single one fails.

Sovereignty = security

Developed and hosted in Germany. Your data stays in-country, no US CLOUD Act, air-gap capable. Certified to ISO 27001 & BSI IT-Grundschutz.

No lock-in

Open GMP protocol, complete API, free data migration. Best of breed instead of vendor lock-in or platform constraints.

Transparency through open source

OPENVAS has been open source and auditable since 2005, not a black-box scanner, but reviewed by a global community and Greenbone engineering.

STRAIGHT FROM THE VENDOR

- In-house support (DE / EN)
- Proof-of-concept installations
- Training & webinars
- Sizing & technical support
- On-site guided installation
- Audits & reports for compliance
