PAPERWISE EXPLAINED
IN 1 MINUTE

THE PAPERWISE STORY

Food crops such as rice, sugarcane, corn and wheat contain only 20% food. The other 80% is agricultural waste; stems and leaves left over after harvest. Billions of tons of agricultural waste become available each year, the vast majority of which is burned worldwide.

What a shame! And also incredibly bad for the environment. In poorer parts of the world, this agricultural waste is burned in the open. Causing the loss of valuable raw materials, unnecessary CO₂-emissions, environmental pollution in the soil and smog as a result of the smoke.

Hundreds of millions of small-scale farmers with very low incomes in developing countries only receive income for the food that the plant produces, which is only 20% of the plant. But what if this can be turned around...

PaperWise wants to contribute to a better world and uses agricultural waste as a raw material to make CO₂-neutral paper and board for printing, packaging and offices. Farmers will benefit because they now receive financial compensation for 100% of the plant instead of 20%! Also, the **environmental impact** of PaperWise is 47% lower than paper made from trees and 29% lower than recycled paper*. A win-win for people and planet!

PRINTING SOLUTIONS

Magazines, annual reports, books, brochures, leaflets, cards, envelopes, calendars; all with a significant lower impact on the environment than FSC or recycled paper! YOU can [combat poverty](#) with your choice of paper, do you realize? More than six billion people live below the poverty line. The majority of them are farmers. By choosing PaperWise, you have significant impact on the level of prosperity of farmers in poor countries. But there's more; PaperWise is produced in factories in India and South America that make a big difference to local communities. PaperWise offers help by [donating](#) a part of the net profit to projects in the regions where PaperWise is produced. Are you ready to be Wise With Waste with us?

[explore all PaperWise office supplies online](#)

OFFICE SUPPLIES

Office products contribute significantly to the enormous amount of plastic and paper waste that is generated every year. It is expected that paper consumption will double worldwide between 2010 and 2060. And for that amount of paper, a lot of trees are needed. A total of 386 million hectares of forest have already been lost between 2001 and 2019. As awareness of deforestation increases and the problems become more visible, more and more companies are making the choice to reduce their carbon footprint. Choosing sustainable paper office supplies and stationery such as printing paper, notebooks, envelopes, business cards, greeting cards and calendars from PaperWise is an easy step to do your part. Are you ready to join?

FUTURE PROOF COPY PAPER

PAPERWISE NATURAL COPY PAPER A4 72 GRAM

Do you believe in a circular economy where waste materials are upcycled to beautiful & high quality paper?

Together we can change the paper industry, stop cutting down 1.5 billion trees every year and contribute to the [Sustainable Development Goals](#). Connection strengthens and accelerates the path to a sustainable economy.
